EDUCATION (SCIENCE AND ART):

[c. 7693.] Forty-second Report of the Department of Science and Art of the Committee of Council on Education, with Appendices. p. 1

[c. 7693-I.] Supplement, Drawing and Manual Instruction in Elementary Schools, during the Year ended 31st August 1894. 423

FORTY-SECOND REPORT

OF THE

DEPARTMENT OF SCIENCE AND ART

OF THE

COMMITTEE OF COUNCIL ON EDUCATION,

WITH

APPENDICES.

Presented to both Houses of Parliament by Command of Her Majesty.

LONDON:
PRINTED FOR HER MAJESTY'S STATIONERY OFFICE,
BY EYRE AND SPOTTISWOODE,
PRINTERS TO THE QUEEN'S MOST EXCELLENT MAJESTY.

And to be purchased, either directly or through any Bookseller, from
EYRE AND SPOTTISWOODE, EAST HARDING STREET, FLEET STREET, E.C., and
32, ABINGDON STREET, WESTMINSTER, S.W.; or
JOHN MENZIES & Co., 12, HANOVER STREET, EDINBURGH, and
90, WEST NILE STREET, GLASGOW; or
HODGES, FIGGIS, & Co., LIMITED, 104, GRAFTON STREET, DUBLIN.

1895.

[C.—7693.]

The annual publications of the Department consist of—

(1.) The Directory, or Code of rules, for establishing and conducting Science and Art Schools and Classes. Price of 1895 issue, 6*d.*

(2.) The Calendar, History, and General Summary of Regulations, which gives a history and general description of the Department, with a summary of the rules and a list of the Science and Art Schools and Classes, &c. Price of 1895 issue, 2*s.* 5*d.*

(3.) The Annual Report, which gives full information as to the operations of the Department during the past year. Price of present issue 1*s.* 9*d.*

(4.) Drawing and Manual Instruction in Elementary Schools. Supplement to the Annual Report, giving the details with regard to Drawing and Manual Instruction in Elementary Schools during the past year. Price of 1895 issue (covering year ended 31st August 1894), 2*s.* 7*d.*

5.) Annual Return made to the Department as to the Application of Funds under the Local Taxation (Customs and Excise) Act, 1890, and the Technical Instruction Acts, &c. for the purposes of Science, Art, Technical, and Manual Instruction in England, Wales, and Scotland. Price of 1894 issue, 10½*d.*

APPENDIX D.—SOUTH KENSINGTON MUSEUM.

Art Museum Returns :

(1.) Contributors of Loans to Art Museum - - - 243
(2.) Contributors who withdrew their Loans - - - 244
(3.) Donations and Bequests to the Art Museum - - 244
(4.) Abstract of Objects acquired by purchase or gift - - 246
(5.) Abstract of Cost of Objects purchased for Art Collections 247

Circulation Returns :

(1.) Visitors, Objects, Receipts, &c. at Provincial Museums and Exhibitions to which contributions were sent from the Department - - - - - - 248
(2.) Objects, Paintings, Drawings, Books, &c. lent to Schools of Art, &c. for purpose of Study - - - - 250
(3.) Science Schools to which collections of Scientific Apparatus have been lent - - - - - - 254
(4.) Summary of Museums, Exhibitions, and Schools of Science and Art, &c. to which objects were lent - - - 255
(5.) Return of Provincial Museums which have received Aid in the Purchase of Objects - - - - - 256

National Art Library Returns :

(1.) Number of Readers, Books acquired, &c. from 1890 to 1894 - - - - - - - 257
(2.) Monthly Return of Readers in 1893 and 1894 - - 258
(3.) Principal Donations in 1894 - - - - 259
Science and Education Library : Return of Readers (1885–1894) - 261

Miscellaneous Returns :

(1.) Monthly attendance of Visitors at the South Kensington Museum - - - - - - - 262
(2.) Comparative statement of yearly attendance of Visitors from the opening of the Museum - - - - 262
(3.) Attendance of the Public during Holidays - - - 263
(4.) Monthly attendance at Bethnal Green Museum - - 263
(5.) Admission Fees, &c. at that Museum - - - 264
(6.) Comparative statement of Receipts at South Kensington Museum, paid into the Exchequer - - - 265

APPENDIX E.

Report of the Director-General of (1) the Geological Survey of the United Kingdom; (2) Palæontological Department; (3) the Museum of Practical Geology - - - - - - - 267
Tables referring to the Geological Survey - - - - - 295

APPENDIX F.

Report of the Director of the Edinburgh Museum of Science and Art - - 301

APPENDIX G.

1. Report of the Dean and Council of the Royal College of Science for Ireland - - - - - - - - - 311
2. Report of the Secretary of that College - - - - - 314

APPENDIX H.

FORTY-SECOND REPORT

OF THE

DEPARTMENT OF SCIENCE AND ART

OF THE

COMMITTEE OF COUNCIL ON EDUCATION.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

May it please Your Majesty,

We, the Lords of the Committee of Your Majesty's Privy Council on Education, humbly present to Your Majesty this our Report of the Department of Science and Art for the year 1894.

Division of Report.

The Report is arranged under the following heads :—

I.—Instruction in Science.

II.—Instruction in Art.

III.—The South Kensington Museum, with the Branch Museum at Bethnal Green, and the circulation of objects of Science and Art to all parts of the United Kingdom.

IV.—Other Museums, in connexion with the Department of Science and Art, supported by the State.

V.—The Geological Survey of the United Kingdom, the Committee on Solar Physics, and the Royal Hibernian Academy.

VI.—Technical Education.

VII.—Inspectors' Conferences.

VIII.—Expenditure of Department.

Calendar.

The Calendar of the Department for the year 1895, which contains a brief historical account of its various branches with a summary of the rules, a list of the Schools, and general statistical and other information, was presented to both Houses of Parliament by command of Your Majesty and published at the commencement of the present year. This Report deals only with the work of the Department during the past year.

I.—SCIENCE DIVISION.

AID GIVEN TOWARDS THE PROMOTION OF INSTRUCTION IN SCIENCE.

(*a.*) *Science Schools.*

Elementary Scientific Instruction.

1. The subjoined table gives the number of Schools, Classes, and Pupils under instruction in Science from 1885 to 1894. Each institution in which Instruction was given in Science is counted in this table as a Science School, whether it consisted of Classes in several branches of Science or only of one Class. During the decennial period covered by the table the number of Schools, of Classes, and pupils under instruction has very greatly increased. But as compared with the previous year the number of Schools had in 1894 decreased by 152—from 2,754 to 2,602—the number of pupils had decreased by about 10,000—from 193,431 to 183,120—and the number of Classes in different branches of Science had decreased by 908—from 10,341 to 9,433. The Minute of the 12th November 1891, which abolished payments on results for a second class in the Elementary Stage, did not come into full operation till the examination in 1894, the Schools in Ireland and in the smaller towns in England being exempted from its provisions in 1893. The diminution in the number of students under instruction is, no doubt, largely due to the effect of this Minute—wholesome though it has been in other respects—and also probably to the opening of numerous technical classes by the local authorities in different parts of the country which have drawn away the students from the classes in pure Science. The decrease in the number of Schools and Classes is owing partly to the same cause and partly, as pointed out in our last Report, to the amalgamation of smaller Schools, or to their absorption in the more prosperous and better supported Schools in their neighbourhood, many Classes in which instruction of a very elementary nature only had been given being at the same time closed.

Year.	Schools.	Classes.	Students under Instruction.
1885	1,542	5,649	78,810
1886	1,682	5,862	94,838
1887	1,684	6,300	103,088
1888	1,952	6,579	112,808
1889	2,195	7,475	131,313
1890	2,063	7,756	133,821
1891	2,164	8,568	148,408
1892	2,553	10,352	180,410
1893	2,754	10,341	193,431
1894	2,602	9,433	183,120

2. Of the 2,602 Schools in 1894, 89 were organised Day Science Schools and 13 were organised Night Science Schools—that is to say, Schools giving a graduated three years' course of instruction in various branches of Science. The number of pupils in these Schools was 11,055 and 2,415 respectively. With a view to increase the efficiency of these organized Science Schools we have recently framed a new set of rules for their conduct. These will be found in the Appendix, p. 5. Under these rules literary instruction forms a more definite part of the course than hitherto, and the grants are awarded more largely on inspection and less on the results of individual examination.

Of the 183,120 pupils under instruction in 1894, 178,529 come within the category of those on account of whose instruction payments on the results of examinations are made by the Department of Science and Art.

2,072 of the schools examined in 1894 were in England and Wales, 347 in Scotland, and 183 in Ireland. This was a decrease on the previous year of 81 in England and Wales, of 32 in Scotland, and 39 in Ireland. The number of students who came up for examination from them was 99,818, a decrease of 6,782 on the previous year. Besides these, 3,578 self-taught students and pupils from classes not entitled to claim payments on results presented themselves for examination.

May examinations.

3. The next table gives, for the same ten years as in the preceding table, the results of the examinations in May, and shows the number of students examined, the number of papers worked, the number of papers which were passed in one class or another, and the number which obtained a first class in the Elementary or in the Advanced Stage.

Year.	Individual Students examined.	Papers worked.	Papers passed.	First Classes in Elementary and Advanced Stages.
1885	54,241	97,238	68,340	20,252
1886	58,476	114,432	78,196	22,726
1887	67,620	127,875	88,405	25,833
1888	74,038	139,369	93,218	24,343
1889	86,054	161,758	108,802	26,119
1890	86,318	162,853	114,245	34,027
1891	93,659	179,549	115,610	28,448
1892	108,858	203,347	136,778	35,932
1893	110,398	201,597	83,511	46,099
1894	103,396	188,773	82,406	49,990

46,999 out of the 103,396 students who were examined were successful in passing in one or more subjects, and of these 20,328 were successful for the first time. In the previous year 58,099 were successful, and 23,018 for the first time. The figures in the preceding table are, it should be stated, not comparable in all respects. Since 1889, "Geometrical Drawing" has taken the place of 2nd Grade Art Geometry and has been included among the Science subjects. Again the abolition, partially in 1893 and wholly in 1894, of the second class in the Elementary Stage of Science subjects affects not only the number of papers passed, but also of papers worked at the examination, one of the objects of the change being, as explained in the Report for 1891, to discourage the presentation of pupils for examination who possessed only a very elementary knowledge of the subject. Lastly, the present "pass" in the Elementary Stage is counted in the last column, though the standard is not quite so high as that required previously for a first class.

4. The examinations were held in 1894 at 2,205 centres in the provinces, and at 145 in the metropolis. Of the papers worked, 144,368* were in the Elementary Stage and 40,828 in the Advanced Stage, the number of first classes in each stage being respectively 43,632 and 6,358; while the number of papers in the Honours division of the examination was 3,577, of which 343 passed in the first class and 599 in the second class. Examinations were also held in various subjects of Science by the Department in the Isle of Man, Jersey, Guernsey, Tasmania, New Zealand, and Australia, the total number of papers worked being 211. (See also table, p. 212.) The cost of these examinations and any payments on their results were borne by the respective Colonies and Dependencies.

Payments on results of examinations.

5. The payments to Science Schools, exclusive of those made to Training Colleges, on the results of the Examinations for the year 1894, amounted altogether to 140,391*l.*, or 10,382*l.* more than in the preceding year. These payments are analysed in the following table:—

—	In 1894.	In 1893.
	£ s. d.	£ s. d.
For each individual student under instruction	– 15 4	– 13 5¼
For each student in each subject - -	– 9 4½	– 9 7
For each paper worked at the examination -	– 14 10¼	– 12 10¾
For each individual student examined -	1 7 1¼	1 3 6½

Reports of the Examiners in Science.

6. The reports of the examiners were printed and circulated among the schools as soon as possible after the examination. Such portions of the reports as have a general interest are reprinted below.

---

* This number includes 18,620 papers worked in Geometrical Drawing, which has taken the place of the 2nd Grade Geometry in the Art examinations since 1889 inclusive.

PRACTICAL PLANE AND SOLID GEOMETRY (Examiners, Major Sir G. S. Clarke, K.C.M.G., R.E., and Professor T. F. Pigot, C.E., M.I.M.E.) :—

ELEMENTARY STAGE.

Although many excellent papers were produced, there is evidence of much weakness in general knowledge of the principles of projection of points and lines.

ADVANCED STAGE.

The results in this section were very unequal. From some schools the answering was excellent, while in too many cases the paper was attempted by students whose knowledge was quite below what is required for an advanced paper, and who obtained either very low marks or failed completely.

Plane Geometry was well answered.

HONOURS STAGE.

The paper was on the whole well worked.

GENERAL.

The number of absolutely ignorant candidates presented for examination is still far too large. Even in the Honours and Advanced Stages, candidates appear who are unable to attempt a single question. This practice should be discouraged as much as possible, and the late regulations of the Department will, it is hoped, have this effect. The number of papers cancelled for attempting questions belonging to two or more subjects is decidedly less than was the case last year, but is still too great.

Teachers are advised to carefully explain in advance the rules of the examinations to candidates, by which an annual loss of marks would be prevented.

As in previous years, attention is again called to the great difference in results attained by different schools. While variations of diligence, of attendance, and of capacity necessarily occur, teaching, if uniformly efficient, should assure results more easily approaching an average than is at present the case. Some extremely successful schools clearly show what may be accomplished, and prove that the papers set are well within the compass of the students.

MACHINE CONSTRUCTION AND DRAWING (Examiners, Professor T. A. Hearson, R.N., M.I.C.E., and Mr. Joseph Harrison, M.I.M.E., Assoc. M.I.C.E.) :—

ELEMENTARY STAGE.

Although the general tendency for years past has been towards the augmentation of the number of candidates, yet this year the total is nearly 2,000 less than in the previous year.

This apparently retrograde step is in reality a material advantage from the point of view of those who desire that the teaching of this subject should be sound and genuine; for although the total number of candidates is less, the number of really successful students is greater than last year.

ADVANCED STAGE.

In the Advanced Stage the average quality of the work showed an improvement as compared with last year, and in connexion with the fact that the number of worked papers in this stage was less than last year, it is satisfactory to note that the number of totally unprepared candidates who sat for the examination was also considerably less.

HONOURS.

In the Honours stage the substitution of the practical examination at South Kensington for the home work has tended to give the examination a more searching character, and to make the results more reliable. Very fair success has been achieved by the candidates this year, and in the opinion of the examiners success in this stage may be taken to be an indication of a high standard of competence as a mechanical engineer.

BUILDING CONSTRUCTION (Examiner, Colonel H. C. Seddon, R.E.):—

There is again a large increase in the total number of candidates, being 501 in excess of last year, 1,296 in excess of 1892, and 2,061 in excess of 1891.

This year's increase is confined to the Honours stage (196) and the Elementary stage (501), there being a decrease of 196 in the Advanced Stage.

Speaking generally, the results in the Elementary stage have been the most satisfactory, the drawing, as a rule, being far better than in the Advanced stage, whilst it may safely be said that the largest per-centage of those drawing badly is to be found in the Honours stage. It appears as if many of the candidates who cannot draw, try to scrape through by means of the questions in the Advanced and Honours papers which only require written answers. To remedy this it would be advisable not to count the written answers unless a certain standard is reached in the drawing questions.

DESIGNS.

The per-centage of worthless designs was decidedly lower than in previous years, but this was no doubt chiefly due to the alteration in the system. Some of the best were very fully worked out for the time at command.

NAVAL ARCHITECTURE (Examiner, Mr. W. J. Luke.)

ELEMENTARY STAGE.

The work done in this stage is quite satisfactory.

ADVANCED STAGE.

The work done is, on the whole, of fair quality, but numerous failures in "Laying Off" and "Calculations" occur: greater attention should be given to these sections by candidates in this stage.

HONOURS.

There is an increase in the number of candidates in this stage, but the number of good work papers is not large.

The failures occur principally in "Laying Off" and "Calculations": with regard to the latter section many of the papers showed that the candidates had no intelligent comprehension of the work.

Teachers would do well to discourage all but thoroughly good pupils from attempting the examination in Honours.

The work done in the practical examination in this stage was generally satisfactory.

MATHEMATICS (Examiners, Rev. John F. Twisden, M.A., Mr. A. R. Willis, M.A., D.Sc., and Mr. P. T. Wrigley, M.A.):—

FIRST STAGE.

The work is, on the whole, better this year than it was last year.

SECOND STAGE.

The results in the second stage show a rather larger proportion of highly-marked papers than last year.

THIRD STAGE.

On the whole the work in the third stage was more thorough and the style of answering better than last year.

HONOURS.

In Honours the work is, on the whole, distinctly good. The best papers are much more highly marked than the best papers of last year; though this is, perhaps, partly due to the paper of this year containing rather more questions, which the students had seen before, than the paper of last year, still the work is probably better than usual.

FOURTH STAGE.

The bookwork in Plane Geometry had been very carefully gone through.

The work in Solid Geometry was not so good as in Plane Geometry.

The questions in Descriptive Geometry were on the whole well answered.

In Geometrical Conics the bookwork was well done, but the riders were seldom attempted.

HONOURS.

Ten papers were sent up, three of them were very good, six fairly good, and one not quite good enough for a pass.

SIXTH STAGE.

The results are much like those of last year, but there are a few more highly-marked papers.

SEVENTH STAGE.

Five papers were sent up; three of these were fairly good, the two others were not quite up to the standard for a pass.

HONOURS.

There were two papers worked; one was very good and the other was fairly good.

THEORETICAL MECHANICS (Examiner, Rev. John F. Twisden, M.A.) :—

As compared with last year there is a falling off in the number of examinees in each division of this subject; but it is very small and is less than two per cent. of the number of last year. On the other hand, in both divisions, the results of this year show a distinct improvement on those of last year. This improvement is by no means limited to the work in the first stage. It is, however, more marked in some schools than in others.

HONOURS (SOLIDS).

There are fewer candidates for Honours this year than there were last year; but the work is distinctly better, and is, on the whole, very fairly good, though some of the papers were weak.

HONOURS (FLUIDS).

The work in Honours was, on the whole, good, and in a few cases it was very good.

APPLIED MECHANICS (Examiner, Prof. T. M. Goodeve, M.A.) :—

Elementary Stage.

The papers worked in this stage show a slight improvement, but the sketches are not so good as they were a few years ago. The proportion of students who show an intelligent acquaintance with the workshops is less than it should be, and there is still a great want of precision of language in giving definitions or in stating principles.

Advanced Stage.

This paper was very well answered on the whole, and appears to have been quite within the capacities of the students, especially those from the larger centres. It was encouraging to find many papers gaining equally good marks for both the practical and theoretical portions of the paper.

SOUND, LIGHT, AND HEAT (Examiners, Prof. A. W. Rücker. M.A., F.R.S., Prof. W. G. Adams, M.A., F.R.S., and Mr. R. T. Glazebrook, M.A., F.R.S.) :—

Elementary.

This paper was done about as well as that set last year. The answers to questions requiring descriptions of experiments were generally very weak. It was evident that in many cases the candidates had not seen the experiments or apparatus which they attempted to describe.

Advanced Stages.

These papers were generally done satisfactorily. Few of the candidates who took the Heat paper were able to give an adequate description of an air thermometer at constant pressure.

Honours Stages.

In the cases of Sound and Light there was a very distinct advance in the work of previous years. The Heat papers were not quite so satisfactory. A large number of candidates qualified in all three subjects, and were examined in practical work. The experimental work was very good, especially that done by the candidates for Honours in "Sound."

ELECTRICITY AND MAGNETISM (Examiners, Prof. A. W. Rücker, M.A., F.R.S., Prof. A. W. Reinold, M.A., F.R.S., and Mr. R. E. Baynes, M.A.) :—

Alternative Elementary Physics.

The answers to the questions in Voltaic Electricity were on the whole the best.

MAGNETISM AND ELECTRICITY.

Elementary.

The general standard of attainment of the candidates who take the elementary paper has certainly improved.

Advanced.

This paper was very well done with the exception of the Voltai Electricity.

HONOURS.

The Honours paper was well done, and a larger number of candidates were examined in practical work than on any previous occasion. The great majority of them showed that they were accustomed to the use of instruments, and the work of several of the candidates was excellent.

CHEMISTRY (Examiners, Prof. T. E. Thorpe, B.Sc., F.R.S., Prof. W. A. Tilden, D.Sc., F.R.S., and Prof. W. N. Hartley, F.R.S.):—

INORGANIC CHEMISTRY.

FIRST STAGE OR ELEMENTARY EXAMINATION.

The papers sent in were of very uneven merit, indicating the relative values of the teaching in different schools.

HONOURS EXAMINATION.

The papers of some few candidates were very creditable, but the majority displayed an insufficient real knowledge of the subject.

The result of the practical work in the Elementary Stage was more satisfactory than that of the written paper, and as a rule showed that the candidates had been well exercised in laboratory practice.

ADVANCED STAGE.

The laboratory work was in a large number of cases well executed, and the written descriptions in tabulated form were good. Nevertheless there was evidence of very defective teaching in many of the schools. A most serious error, and one of very common occurrence, was a failure to recognise calcium and magnesium phosphates, both of which were returned as aluminium oxide. The confirmatory tests known to the candidates were quite inadequate, and even those who worked with care and discrimination were found to go astray.

HONOURS EXAMINATION.

The large number of papers in this subject and the insufficient knowledge of quantitative analysis displayed by the majority of the candidates showed that they had not been educated up to the requirements of the Honours Stage. Qualitative analysis ought properly to be considered as an exercise in examining, ascertaining, and describing the properties of substances, but candidates appear to regard it as a sort of puzzle accompanied by a description of its solution.

ORGANIC CHEMISTRY.

HONOURS EXAMINATION.

Though few in numbers, these papers were undoubtedly the most satisfactorily answered.

PRACTICAL ORGANIC CHEMISTRY.

FIRST STAGE OR ELEMENTARY EXAMINATION.

On the whole the practical work was fairly well done, and the reports fully written out. It appears that teaching is conducted by tables drawn up so as to exclude all absolutely unnecessary examination of substances not contained in the syllabus, and that the instructions so given are too blindly followed.

SECOND STAGE OR ADVANCED EXAMINATION.

HONOURS EXAMINATION.

The qualitative work was well done but with scarcely sufficient judgment. Candidates too frequently note "no definite result" after performing experiments with a definite result, as, for instance, when water is added to a solid and dissolves it, the result shows that the substance is soluble in water a point which occasionally is of importance in ascertaining its composition. Few candidates were unacquainted with the proper methods of determining chlorine in organic compounds.

GENERAL REMARKS.

On the whole the examinations in chemistry showed an improved system of teaching to prevail. A large number of schools afford good instruction in the main facts of chemistry, but a satisfactory knowledge of elementary theory which offers a broad and comprehensive view of these facts is less conspicuous. Consequently in the Advanced Stage, questions which cannot be answered by quoting statements from text books or lecture notes, but require a little careful thought, are not generally selected. In practical work it is very gratifying to note that fictitious or "bogus" tests are very infrequent, and suspicious answers suggestive of copying altogether rare.

There is but little indication of pupils having received the advantage of distinct courses of advanced instruction; this is shown by deficiencies in knowledge of manufacturing processes and scanty information concerning the chemistry of the metals.

(Examiner, Mr. W. Topley, F.R.S.) :—

The more general questions were most frequently answered; those referring to special branches of geology, mineralogy, petrology, and palæontology were much more rarely attempted. Only elementary knowledge, fully covered by the syllabus, was required in these questions.

Taken altogether the elementary papers show a decided advance on those of former years. The new regulations have evidently worked well in shutting out a good proportion of inferior papers.

ADVANCED.

In this division we may note the absence of absolutely bad papers.

As regards the teaching generally, it seems evident that blackboard illustrations are more frequently given than has been the case in former years; but there is still room for improvement in this respect, both as to the extent to which the board is used and as to the clear connexion between the drawing and the verbal explanation describing it.

HONOURS.

A fair number of the papers are good, but not one is of very high merit.

The honours papers too often show a mere text book acquaintance with geology; subjects which are not yet the common property of text-books being often passed over or very inadequately answered. These remarks do not apply to the better papers, many of which show a fair knowledge of current geological literature.

MINERALOGY (Examiner, Mr. F. Rutley, F.G.S.) :—

The teaching in the Elementary Stage appears on the whole satisfactory, the weakest papers seeming to be those of either very young or abnormally stupid pupils, for, in the classes in which such papers occur, quite passable and occasionally good ones are to be met with.

The Honours papers have, for some years past, been far from satisfactory in this subject, but, in the present series, there is a decided improvement.

HUMAN PHYSIOLOGY (Examiners, Professor Michael Foster, M.D., Sec. R.S., and Mr. A. Sheridan Lea, D.Sc., F.R.S.) :—

This year a decided and substantial improvement has taken place in the papers sent up in the Elementary Stage. The Assistant Examiners were quite unanimous in this opinion, which is fully confirmed by a comparison of their results, as a per-centage, with those of last year. The style of the answers as a whole was very different from that of previous years, evidencing greater care and thoughtfulness, and giving the general impression that the candidates had written about what they understood rather than what they had learnt by heart. The length of the answers was as a rule much greater than usual, and it was satisfactory to find that the increased length did not generally imply, as it frequently did in the past, an increase in incorrect or uncalled for information.

In the Advanced Stage the work sent up was inferior to that of last year.

Of the 20 candidates who presented themselves in the Honours Stage four only did well enough in the written paper to justify their being called up for the practical examination. Of these four, one, whose written paper was very good, did exceedingly well, and was placed in the first class. Two did very creditably indeed, and were placed in the second class. The fourth was rejected on account of the inadequacy of his practical work.

GENERAL BIOLOGY (Examiner, Prof. L. C. Miall, F.R.S.) :—

With respect to Elementary Biology, as a whole, it was found that a fair and often quite accurate *verbal* knowledge was possessed by most of the candidates, but that many had little experience of the concrete facts.

ADVANCED STAGE.

A respectable knowledge of the types was exhibited, and a large proportion of the candidates had evidently worked for themselves. The teaching is more thorough and real than in much of the Elementary class work. Candidates who pass in the Advanced Stage are apparently well started with their subject, and can carry it on with advantage, even without a teacher.

ZOOLOGY (Examiner, Professor L. C. Miall, F.R.S.) :—

ADVANCED STAGE.

A good deal of real and practical knowledge was shown by the better candidates, and the methods of instruction are evidently much better than in the case of the Elementary Classes.

HONOURS STAGE.

Four candidates offered themselves, of whom one broke down in the paper. Of the other three, two exhibited a creditable knowledge of the subject.

BOTANY (Examiners, Professor S. H. Vines, M.A., D.Sc., F.R.S., and Mr. D. H. Scott, M.A., Ph.D.) :—

General Remarks.—The Examiners wish to draw special attention to the importance of thoroughly grasping the nature and extent of the questions. In very many cases it was clear that the candidates had omitted to do this, with the consequence that the answers were imperfect and failed to obtain a due proportion of marks.

It is desired also to again draw attention to the importance of describing the specimen, given in the examination, only in so far as it can be *actually observed.* It is not uncommon for structures to be described which are not present in the specimen provided, with the result that an unfavourable impression of the whole description is produced. Further, more care should be taken in ensuring that pupils clearly understand the meaning of the technical terms used in describing plants; at present it is very common to find that contradictory terms are used in different parts of the same description.

FIRST STAGE OR ELEMENTARY EXAMINATION.

The number of candidates in this stage was considerably less than it was last year, but the quality of the answers sent up was (as shown by the numerical results) very much higher.

SECOND STAGE OR ADVANCED EXAMINATION.

The quality of the answers sent up in this stage is very markedly below the level attained last year, on the whole, though some of the papers individually are very good.

PRINCIPLES OF MINING (Examiner, Mr. H. Bauerman, F.G.S.):—

Although the total number of papers is nearly the same as that of last year, or 2,253 against 2,236, there is a considerable change in the proportion of the different classes making up that total; the Advanced papers having increased from 686 to 775, and the Honours from 137 to 203, while the Elementaries have diminished from 1,416 to 1,275.

Notwithstanding the decrease the number of passes in the Elementary Examination is considerably in advance of that of last year, and the results show a decided improvement in this stage.

In the Advanced Examination the proportion of passes has also increased, namely, from 16 to 18·58 per cent. in the first, and from 58·6 to 60·80 per cent. in the second class.

In the Honours Examination the standard of last year has not been maintained, the number of first class, namely, 16, being one more than last year, while those in the second class have only advanced from 32 to 44 with a total increase of nearly 50 per cent. in the number of papers. This is largely due to injudicious work in answering, unnecessary and often uncalled for details being lavished upon single questions leaving the remainder to be dealt with in six or eight lines each; while the disuse of sketches in illustration of the answers is becoming very general.

METALLURGY (Examiners, Prof. W. C. Roberts-Austen and Mr. W. Gowland):—

The evidence afforded by the examinations in Subject XIX., Metallurgy (Theoretical and Practical), which have just been concluded, indicates that the teaching of this subject throughout the country is conducted generally in a satisfactory manner. In a few of the classes, especially in the Elementary Stage, greater attention appears to have been given to the teaching of details of processes and methods rather than to the principles on which they are based, a system of teaching which is not to be commended; but this is exceptional, and it is interesting to note that even in the cases of the candidates who have failed there are comparatively few who do not display a considerable acquaintance with the elementary principles of the subject, inaccuracy rather than ignorance being the cause of the majority of the failures.

In the Advanced and Honours Stages, both Theoretical and Practical, the excellence of the course of training followed in some of the chief schools is really remarkable.

In the Practical examination the candidates often show less intimate knowledge of Practical than of Theoretical Metallurgy, and this is doubtless owing to their having had an insufficient amount of laboratory work, but in one or two instances the faulty methods employed would seem to indicate defects in their training rather than their want of ability.

There is certainly far less tendency than in the past to suggest that methods which are only suitable for the chemical laboratory should be employed for extracting metals from their ores.

NAVIGATION (Examiner, Rev. J. B. Harbord, M.A.):—

The total number of papers sent in this year is less by 93 than those received last year, but the proportion of Honour and Advanced papers to the Elementary is greater. The answering may be considered satisfactory upon the whole, showing good teaching and improvement generally.

NAUTICAL ASTRONOMY (Examiner, Rev. J. B. Harbord, M.A.):—

The numbers of papers this year are four more than were sent in last year, and a larger proportion are in the Advanced and Honours stages, viz., 41 per cent., against 31 per cent. in 1893.

Elementary.—Of the total number of papers, viz., 82, there are 29 failures or about one third; but nearly all these occur in three packets. Excluding these inferior papers the rest of the work is, as a general rule, exceedingly good, both in theory and practical problems.

Advanced.—The results I consider on the whole satisfactory, and there is much evidence of good teaching. Of the 53 candidates eight have obtained a first class and four have failed.

Honours.—Of the four papers sent in this year two are very poor indeed, and of the other two, one attains the standard of a first class.

STEAM (Examiner, Prof. T. M. Goodeve, M.A.):—

ELEMENTARY STAGE.

Regarding the papers as a whole, there was an improvement on the answers of last year. But they were irregular. Some batches of papers being remarkably good, while others were deplorable. Evidently in the latter case the subject was taught without the use of models, diagrams, and proper appliances. It is considered most important that students should be able to make accurate hand sketches, roughly to scale, of parts of machines; and in order to learn to make such sketches they must have materials to work upon.

ADVANCED STAGE.

Rather a higher per-centage than usual obtained marks enough for a "pass," but "first class" papers were decidedly fewer in number. From the character of many papers it is inferred that students are being entered for the advanced stage who are only up to the elementary standard.

PRINCIPLES OF AGRICULTURE (Examiners, Prof. H. Tanner, M.R.A.C., F.C.S., and Prof. R. Warington, F.R.S.):—

ELEMENTARY STAGE.

In the Elementary stage a sound and valuable course of instruction is being given upon the Principles of Agriculture, especially when viewed from an agricultural standpoint. The character of the work done in this stage is commendable, and a steady progress to a higher efficiency is generally observable.

ADVANCED STAGE.

The general character of the papers seems to indicate a lack of definite teaching, and especially of a quantitative handling of the subjects taught.

HONOURS STAGE.

The instruction given in the preparation for this stage is greatly inferior in character, and far less ably carried out than has been observed in previous examinations.

HYGIENE (Examiner, Prof. J. L. Notter, M.A., M.D.):—

The work of this year has, in some cases, been a decided improvement, though there are still evidences of defective teaching, and it was evident that in some cases the candidates were totally unprepared for the examination.

ELEMENTARY HUMAN PHYSIOLOGY.

The replies to the questions in Elementary Physiology were on the whole unsatisfactory. There appeared to be a marked deficiency of good papers in this subject. Some of the candidates made grossly inaccurate statements and distinctly showed that they had little knowledge of the subject. In almost every case in which a candidate failed in Physiology the answers to the questions in Hygiene were equally poor, if not actually bad. In this section of the examination distinct retrogression, it is regretted, is shown.

ELEMENTARY HYGIENE.

The results accord very much with those of last year.

ADVANCED HYGIENE.

The papers were decidedly below the average standard of the last two years. Many candidates have attempted the advanced who were totally unprepared and who would probably have failed in the elementary stage.

HONOURS.

The results of the examination were satisfactory, and, compared with the years 1892 and 1893, decidedly better; the answers were more precise and far more accurate.

Some of the pa in this stage are quite equal to answers which are sufficient to satisfy the examiners in the Public Health examinotions of London, Cambridge, or Manchester.

GENERAL.

Looking at the general character of the whole of the papers sent in, and to the increased number of candidates who present themselves for examination, there can be no doubt that much good work is being done by the dissemination of sound knowledge in regard to the prevention of disease, and as a larger number of qualified teachers will in time be available throughout the country, there is every reason to hope that the instruction will become more thorough and practical, and that the standard of knowledge will be raised, of which, even now, compared with former years, there is distinct evidence.

School Fees.

7. *School Fees.*—The table at p. 80 in Appendix B. gives the fees paid by students in the various Science Schools. They amounted, irrespective of those which were included with the Art School fees, to 36,096*l.* 19*s.* 5*d.* The previous year they amounted to 26,797*l.* 7*s.* 10*d.*

Training Colleges.

8. *Training Colleges.*—The number of Training Colleges examined in 1894 in Science (including Geometrical Drawing) was 50, and the number of separate classes in different branches of Science was 246. Some general remarks from the Examiners

reports are given below, the full reports having been communicated to the Colleges.

Extracts from Examiners' Reports.

PRACTICAL PLANE AND SOLID GEOMETRY (Examiner, Mr. G. Selwyn Edwards) :—

In Section I., Geometrical Drawing, there were only 51 papers examined. The correct division and figuring of scales is again a weak point, and the questions in Solid Geometry are not well answered. A less clumsy use of instruments is shown by the improvement in neatness of most of the drawing.

In the Elementary Stage there is a large increase in the number of papers over last year's examination, the total number examined being 2,052.

A considerable number of papers show evidence of excellent teaching, but there is still, on the whole, much to be desired, many of the answers of large batches of papers exhibiting a want of thorough grounding, particularly in those questions referring to the projections of lines. There is, however, satisfactory improvement in the answers to the question in scales.

MATHEMATICS (Examiners, Rev. J. F Twisden, M.A., and Dr. A. R. Willis, M.A.) :—

Division I.

The general character of the work is very much what it usually is, *i.e.*, not much of it is very bad, a good deal is fairly good, but not much is very good.

Division II.

The work of four of the students is very good, and that of four more is fairly good ; most of the remaining nine students showed some acquaintance with, at least, a part of the Course.

THEORETICAL MECHANICS (Examiner, Rev. J. F. Twisden, A.) :—

DIVISION I.—SOLIDS.

Stage I.

The number of Students who have taken up this subject this year is larger than it was last year, and their work seems to be better than the work of last year. This appears from the fact that more students get high marks this year, and fewer get low marks.

Stage II.

In this Stage, too, the number of students who take it is larger this year than it was last year ; and their work seems to be on the whole better.

Honours.

One of the students sent up fairly good papers ; his answers to four questions are very good ; his other answers show his limitations. The work of the other two students is not satisfactory.

DIVISION II. (FLUIDS).

The number of students who have taken the first stage paper is larger than it was last year, and their work seems to be better on the whole than the work of last year. The best work was quite distinctly good, but a great deal of it came from students in three schools.

SOUND, LIGHT, AND HEAT (Examiners, Prof. W. Grylls Adams, M.A., F.R.S., and Mr. R. T. Glazebrook, M.A., F.R.S.) :—

The Examiners report that while much of the work sent up was very fair in quality certain grave defects were revealed by the examination. There was throughout a great want of exactness and an absence of knowledge of experimental work.

Several questions were set specially to draw out the experimental knowledge of the candidates; the questions were simple in their character, but it was possible to judge in most cases from the answers whether the candidates had seen the experiments described or were endeavouring to reply from book knowledge only. In a very large number of cases the experiments described in the answers were impossible to carry out. The Examiners are aware that it is difficult in the case of the June examinations to insist on experiments being performed before the class by the teacher, though they are aware that this is done in the case of some classes. They venture to think, however, that in the case of the training college examinations it is somewhat different, and to express the hope that it may be possible to call the attention of the teachers even more forcibly than is done at present to the extreme importance of an experimental treatment of the subject.

SOUND—ADVANCED.

More than 100 candidates took the paper on this subject. The greater part of the paper was fairly well done.

LIGHT—ADVANCED.

In this subject there were very few candidates. Some of the answers were creditable, but here again the want of experimental knowledge was plainly shown.

HEAT—ADVANCED.

The paper was not satisfactorily done.

MAGNETISM AND ELECTRICITY AND ALTERNATIVE ELEMENTARY PHYSICS (Examiners, Prof. A. W. Reinold, M.A., F.R.S., and Mr. Robert E. Baynes, M.A.):—

ALTERNATIVE ELEMENTARY PHYSICS.

This paper was on the whole well done.

ELEMENTARY.

The general average was satisfactory.

ADVANCED.

The paper was not well done. Weakness was exhibited in all three branches, Magnetism, Frictional, and Voltaic Electricity. The knowledge shown was in many cases not above the level of the Elementary stage.

INORGANIC CHEMISTRY—THEORETICAL AND PRACTICAL (Examiner, Prof. W. A. Tilden, D.Sc., F.R.S.):—

As regards the Theoretical work the papers in the Elementary Stage are about up to the usual standard; they are neatly written and generally free from the defects noticeable in many of the papers sent in at the May examinations. On the other hand, the answers to the questions in the Advanced Stage are, for the most part, very unsatisfactory. It is clear that this is due to the inefficiency of the teaching. The same strangely erroneous ideas run through entire schools, and are therefore not attributable to the mistakes of the individual students.

The examination in Practical Inorganic Chemistry is almost equally unsatisfactory, for although the great majority of the candidates detected the constituents of the salts supplied to them the methods by which they were detected were bad in principle. The answers to the questions connected with the practical work were as usual very weak.

HUMAN PHYSIOLOGY (Examiners, Prof. M. Foster, M.A., M.D., Sec. R.S., and Mr. A. S. Lea, M.A., D.Sc., F.R.S.) :—

ELEMENTARY STAGE.

The papers seemed on the whole not so good as those of last year; but this has arisen in part at least from a larger number of the Colleges sending up unsatisfactory papers. The papers sent up by certain of the Colleges were, on the other hand, most excellent and deserve great praise.

ADVANCED STAGE.

The candidates in this Stage obviously prepare for the examination to a large extent by learning various statements by heart; they reproduce these statements in their answers in many instances in such a way as to leave the Examiners in doubt whether the writers really see the bearings of what they write, though the statements themselves are correct. A very large number of the marks have been gained in this way; and this is the reason why, though relatively few candidates have been rejected, few, very few indeed, have done well. The majority (over 70 per cent.) obtained less than half marks. This examination ought to mean that the successful candidates had convinced the Examiners that they possessed a real knowledge of physiology; it only means, in as regards at least some 70 per cent., that the candidates had written answers to which the Examiners were bound to give marks.

BOTANY (Examiners, Prof. S. H. Vines, M.A., D.Sc., F.R.S., and Dr. D. H. Scott, M.A.) :—

FIRST STAGE OR ELEMENTARY EXAMINATION.

In spite of the fact that the average number of marks obtained by the candidates is exceptionally high, many of the answers were unsatisfactory, showing, as they did, a certain amount of information, but relatively little knowledge of the actual things themselves. This criticism applies more particularly to the descriptive questions; the answers to these questions frequently consisted merely of a diagram, with the corresponding names, but little or no *description* of the various structures, a mode of answering which cannot be too strongly condemned.

PRINCIPLES OF AGRICULTURE (Examiner, Prof. Henry Tanner, F.C.S.) :—

This examination has once again maintained the reputation of previous years. In the Elementary Stage from amidst a series of good averages, one college has distinguished itself with results which are specially excellent. In the Advanced stage the work justified the award of a full average of marks. In some colleges it has been observed with regret that careless and indifferent teaching has been more general than for many years past. Happily this is well contrasted by the splendid work done in other colleges—especially in two of them.

HYGIENE (Examiner, Prof. J. Lane Notter, M.A., M.D.) :—

The examination in Hygiene varied somewhat in the batches of papers examined. Some were excellent, well and clearly illustrated, and gave evidence of care with which the instruction was given, and of the intelligence shown by the students. Unfortunately this does not apply to all the papers, which in many cases showed distinct evidence of old teaching, and a want of up-to-date knowledge on the part of the instructors. This may possibly be accounted for by the fact that Hygiene is a new subject for examination in the Training Colleges, and that the scope of the examination is therefore not well understood. The instructors should give teaching based on scientific proof, and not merely give instruction on popular "Hygiene" often embracing many fallacies.

Payments in Training College.

The payments on results of Science Examinations held in 1894 in Training Colleges amounted altogether to 10,248*l*., or at the rate of 2*l*. 1*s*. 7*d*. for each student under instruction in Science. The corresponding figures for the previous year were 7,934*l*. and 1*l*. 16*s*. 2*d*. respectively.

Buildings, Fittings, and Apparatus Grants.

9. *Grants for Buildings, Fittings, and Apparatus.*—Building grants were made in 1894 to Science Schools at Batley Rochdale, Gravesend, High Wycombe, Skipton, Rochester, Battersea, Aston Manor, King's Lynn, Tiverton, Banbury and Darwen, amounting to 5,314*l*. The grants for fittings and apparatus, which are now only made to schools in Ireland, amounted to 126*l*. 7*s*. 5*d*. The grants in the previous year being 2,251*l*. 12*s*. 6*d*. for buildings, 333*l*. 13*s*. for fittings, and 93*l*. 17*s*. 9*d*. for apparatus.

Exhibitions and Scholarships &c.

10. *Royal Exhibitions, National Scholarships, and Free Studentships.*—There were 180 competitors for the 7 Royal Exhibitions, 22 National Scholarships, and 6 Free Studentships to the Royal College of Sceince, London, and the Royal College of Science, Dublin. These are awarded on the results of the May examinations. A high standard was attained, as in former years by the successful competitors.

Local Exhibitions and Scholarships.

11. *Local Exhibitions and Science and Art Scholarships.*—Sixteen Local Exhibitions, Science—towards which the Department provides 25*l*. per annum, on the locality contributing a similar amount—were awarded last year, being two more than in the previous year. These are tenable at any institution where advanced Science instruction is given. Of the 16 exhibitioners, 7 elected to study at the Royal College of Science, London; 3 at the Owens College, Manchester; 2 at the Yorkshire College, Leeds; 1 at the Mason College, Birmingham; 2 at Glasgow University; and 1 at the University College, Liverpool. For the *Science and Art Scholarships*, which are awarded to pupils of Elementary Schools and of Organised Day Science Schools under 16 years of age, a local contribution of 5*l*. a year is necessary; this the Department supplements by a grant of 4*l*. in the first year, 7*l*. in the second, and 10*l*. in the third year. 197 first year scholarships were awarded in 1894; 111 Scholarships were renewed for a second year, and 55 for a third year, or a total of 363, being 10 less than in the previous year.

Whitworth Scholarships and Exhibitions.

12. *Whitworth Scholarships and Exhibitions.*—The first competition under the present scheme for these scholarships was

held in 1888, when four scholarships of 125*l.* a year, tenable for three years, 20 exhibitions of 100*l.*, and 10 of 50*l.*, tenable for one year, were given. In 1894 the competition was for four Scholarships of 125*l.* a year, tenable for three years; and 30 Exhibitions, of 50*l.*, tenable for one year. The number of competitors was 107, as compared with 88 in 1893. Of these, 80 as compared with 58 in 1893 passed in the qualifying subjects. The successful competitors continue to show a high standard of attainment.

Aid to local Teachers of Science.

13. *Aid to local Teachers of Science.*—Arrangements were made, as in previous years, at Owens College, Manchester; Firth College, Sheffield; Mason College, Birmingham; the Yorkshire College, Leeds; University College, Nottingham; University College, Bristol; the Durham College of Science, Newcastle-on-Tyne; University College of Wales, Aberystwyth; University College, Bangor; University College, Cardiff; University College, Dundee; and the University of Aberdeen, to aid Science teachers in the country to attend the classes and laboratories in those institutions for advanced instruction in Science. 78 teachers were selected to attend various courses of instruction, three fourths of their fees, for day classes, and one half, for evening classes, being defrayed by the Department.

Further details with regard to Science instruction during the year 1894 will be found in the Report of the Director for Science—Capt. Abney—in Appendix B. (page 56).

(*b.*) *Advanced Scientific Instruction.*

Royal College of Science, London.

14. *The Royal College of Science, London, with which is incorporated the Royal School of Mines.*—The Report of the Dean and Council of the school for the session 1893–94, is given at page 230, 294 students were under instruction in the various divisions of the school during the session, a decrease of 10 on the previous year. Of these 158 were Government students—Royal Exhibitioners, National Scholars, Local Exhibitioners, Free Students, and Teachers in Training—and 136 were private students paying fees. The attendance at the several classes was as follows:—Chemistry, 143; Physics, 100; Astronomical Physics, 75; Mechanics, 71; Mathematics, 130; Metallurgy, 58; Biology (including Botany), 33; Geology (including Mineralogy), 74; Agriculture, 3; Mining, 30; Mine Surveying, 27. These are the gross numbers of both terms, but of individual students the numbers are respectively 114, 91, 75, 61, 130, 42, 23, 68, 3, 30, and 27. The number of Teachers-in-Training was 23 in Chemistry, 14 in Physics, 14 in Mechanics, 11 in Biology, 19 in Geology, and 1 in Agriculture and Agricultural Chemistry, 1 in Mining. The term and session examinations of the College were conducted under the joint examinership of the Professors and external examiners.

Teachers-in-Training.

Summer courses for Teachers.

15. The summer courses for teachers, which last about three weeks, were in the Principles of Agriculture and Agricultural Chemistry, Astronomical Physics, Chemistry, Electricity, Mechanics, Mining and Physiology. They were attended by 243 teachers.

Lectures to working men.

16. The lectures to working men were given by F. Rutley, Esq., F.G.S., on "Minerals used for cutting, grinding, polishing, and the fabrication of tools"; J. B. Farmer, Esq., M.A., on "Plant "Structure, considered in relation to the Environment"; and Prof. T. E. Thorpe, F.R.S., on "Forms of Gas." They were delivered in the Lecture Theatre of the Museum in Jermyn Street. The numbers of tickets issued for the three courses were respectively 255, 177, and 298.

It will be seen from the Reports of the Dean and Council that, as in previous years, a considerable amount of original work has been carried on in the College.

Dublin Royal College of Science.

17. *Dublin Royal College of Science.*—The reports of the Dean and Council and of the Secretary are given in the Appendix, pages 311 and 314. The number of students attending the College was 111 in the past, as compared with 113 in the previous year.

18. Of these 111 students, 29 were going through the full three years' course for the associateship, 15 of these being Government students, *i.e.*, 8 Royal Exhibitioners, 5 Royal Scholars (1 being specially allowed an extra year), and 2 Local Exhibitioners. The number of occasional students was 81. In the previous year the total number of students was 113. Of these, 34 were entered for the associateship, 14 being Government students, and 79 occasional students.

II.—ART DIVISION.

AID GIVEN TOWARDS THE PROMOTION OF INSTRUCTION IN ART.

(*a.*) *Drawing in Elementary Schools and in Training Colleges for Elementary School Teachers; and Manual Instruction in Elementary Schools.*

Elementary Schools.

19. *Elementary Schools.*—During the year ending 31st August 1894, 20,206 elementary schools, with 2,155,311 scholars, were taught Drawing and examined under the regulations of the Department. 872 of these schools were in Scotland, 81 in Ireland, 42 in the Isle of Man, and 18 in Jersey. This was an increase of 329 schools, and of 74,365 scholars, as compared with the numbers in 1892–93, when 19,877 schools were examined in which 2,080,946 scholars were taught Drawing.

Besides the scholars who were taught in the Drawing Standards, 16,842 pupil-teachers and ex-standard scholars were examined in Drawing, of whom 7,473 were successful.

Evening Continuation Schools.

The numbers given above include 559 Evening Continuation Schools, in which 15,887 scholars were examined in Drawing, the grants earned by them amounting to 1,147*l*. In the previous year the number of Evening Continuation Schools taking Drawing was 485 with 18,497 scholars, the grants amounting to 1,261*l*. 18*s*.

Special Drawing Certificate to Teachers.

As stated in our previous report, we decided in May last to issue a Special Certificate to the older Teachers of Elementary Schools who did not hold the Elementary Drawing Certificate, but who had taught Drawing in schools which have obtained two or more good reports since August 1891, and had been recognised by the Education Department as Elementary School Teachers for seven years previous to 1st September 1891, when Drawing was made a compulsory subject of instruction for all boys in schools for older scholars. The number of such Certificates which have been issued up to the present time is 3,417.

Grants, &c for Drawing.

20. The grants for Drawing in 1894 amounted to 159,072*l*.; in 1893 to 152,860*l*.; and the number of schools gaining the awards Fair, Good, and Excellent, respectively, was as follows :—

—	Fair.	Good.	Excellent.
In 1894 - - - -	1,799	13,462	4,926
In 1893 - - - -	3,007	11,439	4,937

The payment per scholar in average attendance in 1893 and 1894 respectively was as follows :—

—	1893.	1894.
	s. *d.*	*s.* *d.*
England and Wales - - - -	1 8·1	1 8
Scotland - - - - - -	1 8·7	1 7·6
Ireland - - - - - -	1 5·3	1 5·4

Manual Instruction, &c.

21. Classes for Manual Instruction have now been established in connexion with 1,021 elementary schools, an increase of 381 on the previous year; 575 of these schools were examined in the year ended 31st August 1894, and earned grants amounting to 8,041*l*. on account of 30,059 scholars.

Full statistics relating to drawing and manual instruction in elementary schools are given in a Supplementary Volume to this Report; and a summary of the totals for the last 10 years as regards Drawing, and for the last 4 years as regards Manual Instruction, is given in Appendix B., at p. 226 of this Report.

Training Colleges and Teachers of Elementary Schools.

22. *Training Colleges and Elementary School Teachers.*—The Annual Art Examination for the students in Residential and Day Training Colleges was held in 1894 at 59 Colleges. At the annual examination in October and November 1,961 students took Freehand Drawing, of whom 696 obtained 1st class; 2,704 took Model Drawing, and 1,036 obtained 1st class; 1,813 were examined in Drawing from Models with Chalk on the Blackboard, and 532 obtained 1st class; 1,988 took Drawing in Light and Shade, and 800 obtained 1st class. The total number of individual students examined was 4,484; in 1893 the number was 4,145. The Elementary Drawing Certificate (1st class) was gained by 491 students. The grants for drawing earned by these Colleges amounted to 2,658*l.* 10*s.*, as against 2,318*l.* 10*s.* in 1893.

A list of the colleges examined, with the statistics for each college, is given at page 213.

(*b.*) *Art Instruction in Local Schools of Art and Art Classes.*

Schools of Art and Art Classes.

23. The number of Art Schools and Classes (including 112 Science Schools) examined in Art in 1894 was 1,758 as against 1,909 (which included 97 Science Schools) in 1893, showing a decrease of 151. The number of students under instruction was 135,807 in 1893, as compared with 136,324 in 1894. Of these, 130,939 were of the industrial class as defined in the Science and Art Directory. Of the 291 Art Schools and branch classes and 1,455 Art Classes examined last year 244 Schools and 1,282 Classes were in England and Wales, 28 Schools and 118 Classes in Scotland, and 19 Schools and 55 Classes in Ireland. The number of students who sat for examination was 75,932 in 1894, or 2,204 more than in 1893, when the number was 73,728.

Examinations.

24. In 1894, 135,261 exercises were worked by students of Schools and Classes. Of these exercises 111,851 were in Elementary stages and 23,108 in Advanced stages, or in subjects having no stages, the number successful in each stage being respectively 47,718, or 42·66 per cent., for Elementary stage, and 14,193, or 61·42 per cent., for Advanced stage, while in the Honours division 302 exercises were worked, of which 99, or 32·78 per cent., were successful. But in addition to the papers worked by these students 11,706 papers were worked by external candidates, and candidates from classes not receiving payments on results, of which 4,865, or 41·56 per cent., were successful.

25. In 1893, 128,845 exercises were worked, of which 107,597 were in Elementary stages and 21,001 in Advanced stages, or in subjects not divided into stages, the number successful being in the former 46,651, or 43·35 per cent., and in the latter 10,309, or 49·09 per cent., while in the Honours division 247 exercises were worked, of which 120, or 48·58 per cent., were successful. But in

addition to the papers worked by these students, 12,736 papers were worked by external candidates, and candidates from classes not receiving payments on results, of which 5,073, or 39·83 per cent., were successful.

Tabular statements of the results in 1894 are given at p. 72.

Works submitted for examination.

26. In 1894, 97,943 works executed in the Schools during the session by 22,358 students were submitted for examination at South Kensington. In 1893, 93,397 works by 21,535 students were sent up.

Scholarships and Exhibitions.

27. *Local Scholarships (Art), Royal Exhibitions (Art), National Scholarships (Art).*—There were 248 competitors for the 20 Local Scholarships and the 10 Royal Exhibitions. Of these Local Scholarships 8 are being held at the National Art Training School, 3 at the School of Art, Leeds, 2 at the Kensington School of Art, Bristol, 2 at the School of Art, West Bromwich, 1 at the Hastings Street School of Art, Leicester, 1 at the Municipal School of Art, Birmingham, 1 at the Technical College School of Art, Bradford, 1 at the Municipal School of Art, Manchester, and 1 at the School of Art, Brighton. The 10 Royal Exhibitions are being held at the National Art Training School, to which 10 new National Scholars were also admitted.

28. *Local Exhibitions (Art).*—Three Local Exhibitions, towards each of which the Department provides 25*l.* per annum on the locality contributing a similar amount, were awarded last year. These are being held at the National Art Training School.

Payments on results.

29. The payments on results amounted to 56,746*l.* as against 52,528*l.* in 1893. The average payment per student under instruction in 1893 was 7*s.* 8¾*d.*, while in 1894 it was 8*s.* 3¾*d.* The payment per student examined in 1893 was 14*s.* 2¾*d.*, and in 1894, 14*s.* 11¼*d.*

County Council Scholarships.

30. *County Council Scholarships.*—The County Council for the County Palatine of Lancashire has awarded seven Scholarships, the County Councils for the West and North Ridings of Yorkshire have each awarded two Scholarships, and the County Councils for Essex, for Norfolk, and for Durham have each awarded one Scholarship, the fourteen Scholarships being held at the National Art Training School, London.

Art instruction in the Colonies and Dependencies.

31. Works have again been submitted to the Department for examination from South Australia, New Zealand, South Africa; and the Isle of Man, Jersey and Guernsey. As the Vote for the Department does not apply to these places, the expenses of examination are borne by the local authorities. The results for these are given in a table at p. 212.

Art Class Teachers' &c. certificates.

32. The number of Art Class Teachers' certificates issued during the year was 369, besides 94 Art Masters' certificates of the first group, 15 of the second group, 4 of the third group, 3 of the fourth group, and 12 of the sixth group.

A table showing the results of the Examinations of Schools and Classes of Art throughout the United Kingdom in connexion with the Department in 1894 is given in the Appendix B., p. 80.

Reports of Examiners on Art Examinations.

33. Extracts of general interest from reports by the Examiners on the personal Examinations in Art are given below. The full reports which contained, in addition, criticisms on the works of individual students have been circulated to the schools :—

FREEHAND DRAWING OF ORNAMENT.—*Examiners: Mr. S. B. Carlill and Mr. W. Hepworth.*

In the Elementary Stage, the subject being less elaborate than last year, there are fewer unfinished drawings; but the general quality of the work can hardly be said to be higher than that of former years.

In the Advanced Stage the drawings show, this year, a more uniform character of moderate efficiency. That fewer are definitely good is, no doubt, to be attributed to the fact that all the candidates were equally unpractised in the subject of their drawings, as distinguished from the condition of former years, when various and known casts were used.

Very few drawings show a correct sense of the projection and solidity of the cast, and generally, the subject has been treated too much in the manner of an incision on a flat surface, or, as if the various parts of the cast were not in relief, but cut out of paper and stuck on the flat surface. Even drawings that are in other respects the best show deficiency here.

MODEL DRAWING.—*Examiners: Mr. Paul F. Maitland and Mr. Martin A. Buckmaster.*

(*Elementary Stage.*)—The greater uniformity attained this year in the arrangement of groups set for examination enables the work of candidates to be judged more in accordance with the actual merit in every instance than could on former occasions be done, when in each case allowance had to be made for the amount of difficulty or facility of execution that the particular group set might afford the student.

Some candidates seem to be very deficient in or even devoid of knowledge of perspective.

(*Advanced Stage.*)—Although work in the Advanced Stage has been executed this year by the candidates more conformably with instructions than at any previous time much remains to be desired in this respect.

The drawing-board on which the group of models rests continues to be an object on which inadequate attention is bestowed.

DRAWING IN LIGHT AND SHADE FROM A CAST.—*Examiners: Mr James Clark and Mr. Henry Bayfield.*

The Examiners desire to express very strongly appreciation of the many advantages resulting from the supply of casts of the same design for use by all in each stage of this subject.

The result of much good teaching is shown.

There are again many instances of badly arranged lighting. It might be observed that a pretty safe rule for securing a good disposition of light and shade on the cast, is to arrange that the rays of light fall upon it at an angle of 45 degrees.

PERSPECTIVE.—*Examiner: Mr. E. S. Burchett.*

Although some of the papers show a higher mark of excellence than last year, it is nevertheless evident that many students attempt the examination with very insufficient preparation.

DESIGN (ELEMENTARY AND ADVANCED STAGES).—*Examiners: Mr. Lewis F. Day and Mr. T. Erat Harrison.*

A greater number of exercises, both elementary and advanced, has been sent in than last year; and the impression conveyed by them is that the general level of accomplishment is higher. That is to say, there is less absolutely bad or incompetent work.

Still, there is plenty of room for improvement, and much that might very easily be mended.

This is especially the case with regard to faithful observance of the Examiners' instructions. Very many failures are to be attributed to the non-fulfilment of conditions—which, it cannot be too clearly understood, are laid down in order that they may be followed.

Great carelessness is shown, for example, in measurement—a simple thing, which demands only a little care on the part of the student; but he seems to be content too often with merely approximate accuracy, and sometimes he ignores it altogether.

The failing with regard to measurement is so universal that the Examiners feel bound this year to deal leniently with it, except in the case of certain exercises showing such wilful contempt of instructions that they could not pass it over. Another case in which conditions are more or less disregarded is, where drawings are executed practically in pencil, merely supplemented with a wash of colour. That is not the kind of water-colour drawing distinctly asked for. The pencil lines should count for nothing in the result.

Sometimes the apparent disregard of rules seems due less to wilfulness than to want of intelligence on the part of the student. It is probably for lack of understanding that the "reversible" pattern asked for is found frequently not to reverse, or that it forms a design complete in itself.

Again, it is difficult to understand how anyone of ordinary intelligence can mistake, as some have done, a "geometric diaper" to mean a floral design set out on geometric lines. Geometric lines are already implied in the word "diaper."

Neither can the word "floral panel" be reasonably understood to mean a piece of ordinary Italian Renaissance ornament.

The Examiners would like to see the *purpose* of the design more generally kept in view than is the case, especially in the advanced stage. Designs are described as for *velvet* which would work out more satisfactorily in *damask*, and *vice versâ*. *Drawer fronts* are most often designed without sections, elevations, or other working details of handles; sometimes without regard to the placing of the handles at all, and in about one case out of four with a keyhole either absurd in size or placed in a very unbusiness-like position.

This point of *workmanlikeness* is one which should be much more strongly insisted upon than it seems to be in many schools. The very small number of designs submitted for *glass* may point either to the students' unfamiliarity with its technique, or their not caring to grapple with the conditions of "Gothic." But it happens that there is singularly little response to the other sections of Question I. (advanced). The greater part of the *Moresque diapers* sent in are scarcely recognisable as such, and there is only one Henri II. panel out of the two or three sent up which comes anywhere near the mark. These very few and inadequate exercises in *Historic style*, point either to the neglect of the subject, or distaste for it on the student's part. The Examiners are of opinion that, without some acquaintance with historic ornament, the education of the designer is most incomplete.

Referring to the *execution* of designs, it is frequently quite as good as one could expect, whether in the advanced or elementary section; but a good deal of work is sent up which is not carried far enough.

It is satisfactory to note that there is great care shown in many drawings, and that it is only occasionally that a drawing is dirty and pretentious.

Neither are there, happily, so many drawings as before which aim essentially at picturesqueness, it is *working drawings* which are wanted.

There is further cause of congratulation in the rather better taste displayed this year than last. If the colour scheme is seldom very original, the tints are not often crude or harshly contrasted. There seems to be a general seeking after graceful line. That there is seldom any very strong character in the design may be accounted for by the praiseworthy desire to keep within the bounds of good taste. Only very rarely does a drawing otherwise not without merit shock one by its tastelessness. On the other hand, a drawing, tasteful in effect, sometimes proves on examination to be incoherent in design. It is to be regretted that in some cases drawings which would rank fairly well lose their place through carelessness of execution, and that some designs which seem to promise, are disqualified through absolute incapacity of workmanship. This is an exercise in *design*, but some measure of adequacy in execution has of course to be insisted upon.

A certain appreciation of *style* in design is shown by many students. Faults of style occur mainly in two opposite directions. On the one hand, neat and careful drawings are apt to be small in scale and triflingly elaborate; on the other, bolder designs are often unfinished and empty of detail, or are finished in a pretentious way. The artistic mean lies between these two extremes.

The Examiners are not, on the whole, at all dissatisfied with the work. If their remarks refer mainly to shortcomings and defects, it is because there is less to be said about good work (which speaks for itself), and because it is by pointing out wherein the student fails that they think they can best help him to do better.

Design, Honours.—*Examiner: Mr. F. J. Shields, A.R.W.S.*

By way of general remark upon the papers submitted for examination it appears much to be desired that the students should seek to cultivate a more delicate and acute sensibility to the beauty of the antique examples set before them in the shape of fine casts, &c.

But it is still more to be deplored that in the vast majority of these papers there has been little previous reflection, the incident selected for illustration has not been conceived in the mind's eye, and the issue is in mere vacuous scrawlings. These are as destitute of any evidence of sensibility to the subjects set for examination as they are of any sign of receptivity of the Standard Models of Ancient Art, which are presumed to have been subjects of earnest study with candidates for this examination.

Students sometimes complain that they lack efficient masters. These papers constrain one to say that the masters may reasonably complain that they have few intelligent and earnest pupils.

The most enthusiastic master chills when he is confronted day after day with stolid dulness. But there are a few of the designs which are more encouraging.

The impression of want of general culture prevalent among the students represented, which the Examiner received upon a previous occasion, is renewed, for whether the subjects selected be taken from Greek or Hebrew history, many of the candidates betray an ignorance very discreditable to them. For example, some of the designs represent Jonathan, some David also, as old and grey-headed, and others of them outrage the most imperative conditions of a foot-race, Greek or otherwise.

Anatomy.—*Examiners: Professor Arthur Thomson, M.A., M.B., and Professor Robert Howden, M.B.*

Professor Arthur Thomson reports:—

There is a steady increase in the number of Candidates entering for this examination, due, no doubt, to the altered character of the test.

Unfortunately many of the Candidates display such a lack of anatomical knowledge that it can only be premised that they never seriously attempted to prepare themselves for the examination. Such a class of candidates should be discouraged.

The average results compare favourably with last year's, though on this occasion there are no papers of such outstanding excellence as those to which special reference was made in 1893.

Professor Robert Howden reports:—

Taken collectively the papers sent in form a good average, while in some cases the sketches were of high merit and the knowledge of anatomical relations and details remarkable.

Some of the drawings, however, showed the candidates' knowledge of the relation of the skeleton to surface outline to be very defective.

ARCHITECTURE.—*Examiner: Professor T. Roger Smith.*

The general quality of the work of those candidates who have done well is extremely satisfactory—more so than usual; but, on the other hand, the work of many of those who have either failed to pass or passed by a narrow margin includes a good deal that is by no means of an encouraging character. It is of course quite possible for work which is not carried far to be yet thoroughly satisfactory as far as it goes; but many of these candidates have aimed at a great deal more than their knowledge or their power of drawing justified them in attempting, and have consequently done little, if anything, really well.

The work of this year is, it is gratifying to report, conspicuous for good draughtsmanship.

The opportunity afforded to candidates, by one of the questions, of drawing from recollection a feature of some architectural work which they have personally studied, has been the means of eliciting a great amount of really excellent work; a result which shows that in many of the Schools of Art the attention of the students has been wisely directed to the study of actual buildings of good architectural character as the best objects from which to learn. The same remarks apply to a great extent also to the drawings illustrating an entire building; but that is a more difficult task to accomplish with success in a limited time, and to a small scale.

The Examiner was much struck by the absence of indications of anything approaching a wide knowledge of architecture. Several questions intended for advanced students who studied the subject in something of a liberal spirit have been avoided by almost every candidate. Questions on Roman decorative work, on the French architecture of the early Renaissance, and even on Italian Renaissance have elicited remarkably few answers. These are subjects upon which every moderately well-educated student of architecture might be expected to be well informed, and it is regrettable that they should apparently not have been sufficiently studied by even the advanced students for them to be prepared to select the questions relating to them as subjects for their answers. It appears that this points to a narrowness in the system of teaching which, if possible, it would be well to correct.

ARCHITECTURAL DESIGN.—*Examiner: Professor T. Roger Smith.*

That the numbers have diminished may of course be entirely due to accidental circumstances. This competition under the new syllabus has, however, very possibly not been quite so attractive to ambitious students, as under the old arrangements, which approximated more closely to the conditions of actual public competitions as usually conducted by persons requiring designs for public or other buildings. However this may be, the competition this year has, in my judgment, been the means of obtaining a great deal of good and solid work, and less that is either extravagant on the one hand, or trivial and poor on the other hand, than has been submitted in some former years.

The problem set was the architectural treatment of the staircase for a public building. There was no limitation as to style, but practically all the good designs were in some form of Renaissance. Gothic was tried by a few candidates, but none of them showed much proficiency in the adaptation of that style to secular purposes. No design in Greek architecture was submitted. In many instances pure Italian Renaissance has been attempted, and in others one of the transitional varieties, such as Jacobean. These varieties are for the most part better managed this year than they were last. The style adopted has been in most cases consistently and intelligently adhered to, and the many opportunities which the subject offers for showing skill and good training have been understood and made use of by many of the candidates.

The draughtsmanship of all the designs which have obtained high marks is good, in some cases it is extremely good. In a few instances colour has been introduced by candidates.

These satisfactory general results reflect credit on the students and on the teachers under whom they have studied, and appear distinctly better as a whole than those of last year, and of some previous years.

Several students have given details of mouldings or other parts of the architectural treatment to a large scale, and have given them well.

Principles of Ornament.—*Examiner: Professor G. Aitchison, A.R.A.*

In the elementary stage there is a great improvement in the knowledge of geometry. The most common errors in the answers to geometrical questions are making an acute angled triangle with only one instead of three acute angles the confusing of the rhomboid with the rhombus, and the angles of the cutting plane in conic sections, and the mistaking of a sector for a segment of a circle.

The names and shapes of the forms commonly used in Ornament are better known than last year, and the drawing has improved. There is, however, still much to be desired in the candidates' knowledge.

The greatest ignorance shown is in the profiles of the classic mouldings, few being certain as to which are Greek and which are Roman.

One of the greatest objects in teaching is to train the faculties so as to make what would otherwise be drudgery into an interesting occupation.

After the common names and forms are learnt, and ornament is separated into its main component elements, and while the eye and hand of the student are both being trained by drawing or modelling, his powers of observation should be specially cultivated too.

Advanced.—The best of these make very creditable drawings of articles that are ornamented with floral and animal forms, and a few give a good account of the principles involved. Amongst those who attempt the geometry there is a very fair knowledge of conic sections, but very few attempt the spirals.

The attempts at drawing from memory former masterpieces of ornament have not been very successful.

The flowers and plants drawn from memory are, as a rule, highly satisfactory, and in some cases admirable; but in making abstracts from them for conventional ornament the candidates are by no means so successful. This subject should be specially taught, by students being shown good examples of conventional ornament, and having the plants from which they have been abstracted pointed out to them, and then making paraphrases. The gift of making good abstractions is necessarily rare, but without it the student is not fit for an ornamentalist. The mere dragging of natural foliage into the shapes wanted is not ornamenting. The plant's object is to get light and sustenance; the ornamentalist's to adapt floral and animal forms so as to add interest to some article, and this ornamentation should show as much of the mind of the ornamenter as of the suggestions got from nature.

There is a great want of knowledge of harmonic proportion, and in complex solids of the proper shapes, sizes, and sequence of the forms.

Good drawings of human figures and animals as parts of the ornamentation of various things are less frequent than on some former occasions.

Attention is drawn to the mistake candidates make in covering the whole of any article with ornament of nearly the same weight and value; no matter how good the ornament may be, it wants plainness, as a foil, to set it off. If the Saracens did frequently err in this respect, they were careful to make their ornament of different weights, so that when seen at the proper distance some parts seemed merely roughened; and they were not the greatest masters of ornamental art. The Greeks were very chary of their ornament, and thus enhanced its value; for the plainness not only gave value to the ornament by contrast, and made it precious by its rarity, but proclaimed it to be precious.

Painting from Still Life.—*Examiners: Mr. W. F. Yeames, R.A., and Mr. E. F. Brewtnall, R.W.S.*

The Examiners consider the average of the work is on a level with that of former years; that the amount of sound work is well on the increase while the absolutely bad is rarer: on the other hand, the performances of the highest excellence are fewer in number.

PAINTING ORNAMENT IN MONOCHROME.—*Examiners: Mr. Lewis F. Day and Mr. G. McCulloch.*

All things considered the work was probably quite up to the mark. If few have shown sympathy with the Byzantine original, or preserved the flavour of the style, and if some have been puzzled by the problem set, others have risen to the occasion and have shown both taste and ingenuity in adapting the rather rudely carved original to brush treatment. It is satisfactory to notice that candidates have more generally observed the rules laid down for them than heretofore. Only here and there has anyone spoilt his chance of success by disobedience. Though many have painted in a colour not by any means either "in harmony with the ground or in gentle contrast to it," few have wilfully painted in the positively bright colour prohibited.

There were fewer attempts this year to impose upon the Examiners the slovenly, slapdash work which used to be so common. It is to be hoped that another year this kind of thing will have ceased altogether to be sent up.

The scale prescribed has been more generally adhered to than before.

The quality of work distinguishable as "excellent" depends, probably, more upon the individual capacity of the students than upon the teaching of the master, and is not to be reckoned upon with certainty; it is always to some extent an accident.

DRAWING FROM THE ANTIQUE.—*Examiners: Mr. W. F. Yeames, R.A.; and Mr. E. Crofts, A.R.A.*

The Examiners found no falling off in this exercise, but an increase in fair work, extending specially through the lower marked drawings.

The angular system adopted in some schools, and the blocking out of the shadows in others, giving the figure the look of being roughly hewn out of stone, has become a dangerous and objectionable mannerism.

DRAWING FROM THE LIFE.—*Examiners: Mr. W. F. Yeames, R.A., and Mr. E. Crofts, A.R.A.*

The Examiners from long experience in drawing from the living model were perfectly aware that the pose given by the Department to the schools would entail rests and many of them. In spite of this apparent drawback, they found no deterioration this year in the bulk of the work; on the contrary, the drawings bore a pleasanter aspect than heretofore, and they came to the conclusion there was an advance on the preceding year's performance.

As year by year the examiners notice a small but steady improvement in this exercise, they think it proper and to the advantage of the student that more varied and difficult poses should be set before him. This will of necessity entail frequent rests for the model and more rapidity and certainty on the part of the student, enabling him to make greater progress and derive the chief advantage offered by this exercise, namely, a vigorous and life-like representation of the living model.

The Examiners would rather see less completeness in the attempt to render a difficult action than have fair drawings from a commonplace pose, such as the pose must necessarily be when the model is given one that he can easily keep throughout the sitting.

They are gratified to see that the black and overshaded drawings are rapidly diminishing, and a better style pervading the schools throughout.

DRAWING THE ANTIQUE FROM MEMORY.—*Examiners: Mr. W. F. Yeames, R.A., and Mr. E. Crofts, A.R.A.*

The Examiners were pleased to see the number of works submitted to them in this exercise increasing year by year, and hope it will continue doing so, as in their opinion the practice of memory is of the greatest importance to the student who desires eventually to give play to his imagination in the pursuit of his Art, whatever the branch may be that he devotes himself to.

Among the drawings were many deserving of commendation, though still leaving much to be desired. The superior ones showed a very fair recollection of the proportions, actions, and characters of the Faun and Germanicus. The failures only confirm the Examiners in the view that, when such misrepresentations of the originals are given, the student, when drawing from them, did not attempt to impress on his mind and memory the points in the statue, which, once thoroughly grasped by him, would always after serve him in his work as an artist.

The manner adopted in drawing and shading, with very few exceptions, was considered suitable to the exercise.

HISTORIC ORNAMENT.—*Examiner: Mr. J. H. Pollen, M.A.*

The papers on Historic Ornament show a material advance this year. The sketching is of a higher order; indeed the sketches of the decorative features of classic architecture are, in several instances, so good that they might serve, as they are, for good book illustrations on their proper subjects. The same may be said of the sketches of prehistoric ornament.

It would be well if one could speak in the same terms of the sketches of objects in metal work, ivory, jewellery, furniture, &c. They are decidedly better than they were two years ago, but there is still great room for improvement.

Local and other Museums in connexion with the Department, the examples in the several schools of art and the circulating collections of objects of all kinds, original or reproduced (equally good for sketching), do not seem, so far as the examinations papers on Historic Ornament can be taken as proofs, to attract students to spend part of their leisure time in sketch-book studies of those beautiful things.

How else is it that the general run of students fail too often to draw correct outlines of things of which their written answers show their just appreciation?

While the hand is pliable, such an exercise seems to promise well. Nothing stores the memory with correct images like the practice of sketching definite objects, or parts of their ornamental detail.

MODELLING DESIGN (ELEMENTARY AND ADVANCED STAGES).—*Examiner: Mr. Lewis F. Day.*

ADVANCED STAGE.

A choice of three subjects was given; but little advantage was taken of the choice allowed. The design for a tray, for example, tempted only some half dozen students.

Nor were the instructions given followed with great intelligence. It seems in many cases not to have been realised what was meant by "Strapwork," which is such a marked feature of French, and our own English, Renaissance carving.

Mouldings seem still to puzzle the great majority of students, which should not be. Some omit the mouldings altogether, and lose marks accordingly. Many who have attempted them fail to run them with any approach to right lines.

Then with regard to the fitness of design to its purpose. The works placed highest conform to this necessity, and are adapted to woodcarving or embossing in leather; but, for the rest, anything like suitability of design is often very far to seek.

Some students appear to have been thinking about modelling only, and not at all about design. It seems as if they had been taught to think more of light and shade than of form, more of the clay they were manipulating than of the wood or what not in which their model was to be carried out; some of them also were evidently thinking what very clever fellows they were; perhaps they will be surprised to find that the kind of bravura in which they indulge is not approved of by the Examiner. The point is insisted upon because in some cases possible powers seem to be wasted for want of a little modesty.

It is satisfactory to notice that only in comparatively few cases has the student adopted a feebly naturalistic manner altogether devoid of style.

It seems a pity that some sort of proper discrimination should not be exercised as to the stage which a student attempts. Some 80 or so of those who entered themselves in the advanced section should have tried *at most* to pass in the elementary division.

ELEMENTARY STAGE.

In the exercises sent in the average work is distinctly good. There is less that struck one at once as hopeless than was the case last year, or than is the case this year in the advanced section. Moreover, there is good work by candidates who would probably have passed well in the advanced stage. Generally the subject is approached with more modesty than is shown by some candidates in the advanced stage, and with corresponding success. This is shown in the care given to mouldings. Not but what there is plenty of room for improvement in this respect; but there is on the whole an amount of attention paid to them which argues well for the future. Marks have in all cases been given for mouldings. On the other hand, those students who, in defiance of instructions, have indulged in relief of $\frac{3}{4}$ of an inch or so, have lost what chance they may have had of passing.

Here, again, the latitude of choice allowed has not been taken advantage of. Few have attempted the frieze, fewer still the very simple panel with more important mouldings.

On the whole, as before said, the work in this class is most praiseworthy; that is to say, there is a good amount of work above what one might fairly look for. After that it falls off rather suddenly, but not below what was to be expected in an elementary stage. Three works obtain full marks.

MODELLING DESIGN (HONOURS).—*Examiner: Mr. E. Onslow Ford, R.A.*

The designs submitted are by no means creditable as a whole. As regards the modelling, with one or two exceptions the work is untidy, careless, and wanting in charm or beauty of any kind. In most cases the mouldings are neglected altogether, and there are only a few of them on which care has been bestowed at all.

Most of the sketch designs for chimney-pieces drawn on paper to show the position of the relief in the chimney-piece are of very indifferent and scamped draughtsmanship, and appeared to be merely recollections of the very ordinary and commonplace forms of chimney-pieces.

In some cases the models and the drawings are very crude. Students cannot begin too soon to try to design, and should therefore by all means be encouraged in such subjects as are usually set for examination. But merely having tried is not necessarily a qualification to sit for such an examination as this.

MODELLING FROM THE ANTIQUE.—*Examiner: Mr. T. Brock, R.A.*

Although the number of candidates at the examination in this subject largely exceeded that of previous years, the quality of the work done was fully up to the average. Indeed a few of the models appeared to possess rather exceptional merit. Many, however, were feeble to a degree, showing clearly that the candidates had not been sufficiently prepared for examination.

MODELLING FROM THE LIFE.—*Examiner: Mr. T. Brock, R.A.*

With very few exceptions the modelled reliefs from the Life failed to reach the standard attained last year.

It is, however, gratifying to find, by the large increase in the number of models submitted this year, that the importance of this examination is recognised.

At the same time the work of many of the candidates (quite 15 per cent. of the whole) was of the poorest description. These candidates should not have been presented for examination.

Speaking generally, the figures lacked character, and were indifferently drawn, especially about the extremities.

National Competition.

34. *National Competition of Schools of Art and Art Classes, 1894.*—The works submitted for the National Competition were examined by the following gentlemen, under the general superintendence of the Director for Art, T. Armstrong:—G. Aitchison, A.R.A.; H. H. Armstead, R.A.; E. F. Brewtnall, R.W.S.; T.

Brock, R.A.; Alan S. Cole; Hon. John Collier; E. Crofts, A.R.A.; Lewis F. Day; W. DeMorgan; E. Onslow Ford, R.A.; A. C. Gow, R.A.; Arthur Hacker, A.R.A; H. Graham Harris, M.I.C.E.; T. G. Jackson, A.R.A.; G. D. Leslie, R.A.; W. Morris; F. Shields, A.R.W.S.; J. J. Stevenson; Hamo Thornycroft, R.A.; Stephen Webb; W. F. Yeames, R.A.

The number of Works selected for the National Competition was 3,605.

Examiners' award.

The names of the students to whom Gold Medals were awarded are given at p. 225, Appendix B. A complete list of the awards has been issued to the Schools. They consisted of 9 Gold, 56 Silver, and 177 Bronze Medals, and 379 Prizes of Books gained by general students; together with honorary awards of 3 Gold, 18 Silver, and 54 Bronze Medals, and 90 Book prizes obtained by Free students of the National Art Training School.

Extracts from Examiners Reports.

The complete reports of the Examiners on the works having been sent to the schools, it is only necessary to give here such extracts as are of general interest.

MODELLING.—*Examiners: Mr. H. H. Armstead, R.A.; Mr. T. Brock, R.A.; Mr. E. Onslow Ford, R.A.; and Mr. Hamo Thornycroft, R.A.*

Modelling the Figure from the Antique in the Round.—The Examiners notice an improvement over last year's work, but regret to find a want of that complete finish which they expect to see in this class of students' work from the antique.

Heads from the Antique.—The works in this subject are fully up to the average. The Examiners are pleased to see studies from Florentine (15th century) work.

Modelling Figure from Life in the Round.—The Examiners had before them a very good show of models, in which they were glad to see good earnest work.

From the National Art Training School a good set of works is submitted, quite up to the highest average touched in previous competitions.

Reliefs from Life, Figure.—The works submitted are of a very low order, and the Examiners feel conscious that a large proportion of the competing students were not sufficiently advanced to submit works in this subject.

Busts from Life, in the Round.—There is an excellent competition amongst the works in this subject submitted by general students, the quality of them being exceptionally high.

A much lower standard of quality is noticed in the busts submitted by students in the National Art Training School.

Heads from Life in Relief.—There is but a very weak competition in this subject.

Anatomical Studies.—Very few works in this class are submitted, but the Examiners consider them to be very satisfactory, great care having been taken in their execution.

Modelling Drapery.—The Examiners regret to see so few studies of drapery.

Fruit and Flowers from Nature.—In many of the works in this subject the arrangement is too little considered, resulting in confused effect and loss of clear expression.

Modelling Ornament from Drawings or Photographs.—A very good set of works is submitted in this class, and the Examiners think that the selection of subjects is better than usual.

Modelling Ornament from the Cast.—The Examiners are very much pleased with the careful way in which the works in this subject have been carried out.

Design with Figure.—The Examiners consider that the competition in figure design is an extremely good one, and that the works show a distinct advance in quality over those of last year. They are much pleased with the increase in the number of works which are suitable, and good enough, to be put to the special purpose, or rendered in the particular material for which they have been designed.

The Examiners are much pleased with the figure designs submitted by students of the National Art Training School.

The Examiners note several works which are are merely groups of figures and animals, and are not therefore " Figure Compositions and ornamental designs " with figures, as applied to decorative or industrial Art."

Design of Ornament without Figure.—No originality is shown in the designs for plates. The students appear to be aiming at imitating the designs and worn surfaces of old work rather than getting their inspiration from nature.

The Examiners are pleased to note that in several instances the designs submitted by students of the National Art Training School are evidently based upon a careful study of nature. They regret that this is not the case with designs for plates and cups submitted by students of other schools.

Ornamental Arrangements to fill given spaces.—The designs in this class show great want of originality, though in most cases the spaces are well filled.

PAINTING FROM THE LIVING MODEL, DRAPERY, AND IN MONOCHROME FROM CAST, FIGURE, &c., ANATOMY.—*Examiners: Mr. W. F. Yeames, R.A.; the Hon. John Collier; and Mr. A. Hacker, A.R.A.*

Painting Figures from Life.—The Examiners note a distinct improvement in the paintings from the living model sent from the National Art Training School.

Painting Heads from Life.—The Examiners regret that they do not see improvement in the painted heads sent from the National Art Training School.

Painting the Figure in Monochrome from the Cast.—The Examiners would like to see more of these paintings done from the complete figure.

Anatomy.—Some of the drawings submitted show too much elaboration and too great a desire to make pretty drawings rather than clear scientific diagrams.

Drawings of Drapery arranged on the Antique Figure.—There is a good show of work in this class, and more taste than heretofore also is displayed in the arrangement of the drapery.

Drawings of Drapery arranged on Living Model.—The Examiners see here also a decided improvement in the cast of the drapery on the model and in the students' method of rendering folds.

ANTIQUE FIGURE, DETAILS, &c.—*Examiners: Mr. W. F. Yeames, R.A.; Mr. E. Crofts, A.R.A.; and Mr. A. Hacker, A.R.A.*

Antique Figures.—The Examiners are gratified with the general aspect of the drawings in this class owing to their lighter treatment compared with that in former years.

A generally good set of drawings in this class is submitted from the National Art Training School, the bulk of the drawings showing decided improvement both as regards the rendering of the action of the figures and in the methods of execution.

Two drawings for which gold medals might have been awarded are not according to regulations as to size. Silver medals are awarded for them.

Drawings of Heads, Features, Hands, Feet, &c.—The Examiners are glad to see a slight improvement generally in this class of work, but still notice in the treatment that forced blackness which has been disapproved of in previous years.

The Examiners are surprised to see so few works in this subject sent up from the National Art Training School. Those presented are of inferior quality.

DRAWING FROM THE LIVING MODEL.—*Examiners: Mr. W. F. Yeames, R.A.; Mr. A. C. Gow, R.A.; and the Hon. John Collier.*

The Examiners wish to impress upon the students the necessity, when studying from a model, of working with perfect sincerity, and that no attempt should be made to alter or idealise the subject.

Drawings of Figures from Life.—On the whole, the Examiners consider the work in this class fairly good, and they note with pleasure the general absence of overdark shading and elaborate stipple.

In the drawings sent in from the National Art Training School, the Examiners see a continued improvement in the work generally, but regret that none of the drawings come up to the high standard which should be expected from this school.

Time Sketches from Life.—No one set of sketches from life presented to the Examiners reaches the standard touched last year.

A general improvement is noted in the sketches from life submitted from the National Art Training School; more awards have been made, but no set is worthy of so high an award as was made last year.

Heads from Life.—As a class, the work shows improvement on that of last year, but the Examiners still have to deplore extreme blackness in many of the drawings, which is perhaps due to striving after the effect of tone rather than precision of drawing.

A very poor set of drawings of heads from life is submitted from the National Art Training School.

Drawing Hands and Feet from Life.—The Examiners regret to see so few works in this subject, and these are mostly very poor in quality.

DRAPERY; PAINTING FROM STILL LIFE.—*Examiners:—Mr. G. D. Leslie, R.A.; Mr. W. F. Yeames, R.A.; and Mr. E. F. Brewtnall, R.W.S.*

Drapery on Antique Figure, from the National Art Training School.—There is a decided improvement in the casting of the draperies from which the students of the National Art Training Schools have worked.

Paintings in Oil Colours from Groups of Still Life.—As a class, the work in this subject sent from the National Art Training School is satisfactory.

Paintings in Water Colour from Groups of Still Life.—The Examiners are sorry that none of the works in this section submitted by students of the National Art Training School rise to the level of a silver medal award. The students are obviously working with little sympathy with, and interest in their subjects.

Painting Flowers and Still Life without Backgrounds.—As a whole this class of work keeps up to its high standard, and it is one which the Examiners, especially as regards flowers, consider to be very valuable.

The Examiners regret that only two specimens of work in this subject—flowers without background—were submitted from the National Art Training School.

Interiors. Tone Studies.—The Examiners are very well pleased to see a good honest endeavour in some of the works submitted to them to carry out the requirements of this competition as expressed in their report on works submitted in 1881, where they suggest that a "medal may be offered for a "study in light and shade, treating a number of objects with especial "reference to 'tone' and the true expression of their relative force in light "and shade, and their position in the picture.

Views of Buildings.—Awards were made for some careful drawings, which are interesting as records of old buildings.

PAINTING ORNAMENT IN MONOCHROME; STUDIES OF HISTORIC ORNAMENT.—*Examiners: Mr. Lewis F. Day; Mr. Frederic J. Shields, A.R.W.S.; and Mr. Stephen Webb.*

Monochrome Painting on coloured ground from the Cast or the Flat.—The Examiners would like to see more students submit work in this subject.

Historic Ornament.—The Examiners object to the students copying any blurred appearance of an original pattern, by which the design is confused.

They again complain of the great waste of time in, for example, completing with great elaboration a design one-sixteenth of which would fully explain all that is to be learnt from it.

A gold medal is awarded.

The Examiners regret that more intelligent use of the Museum is not made by students of the National Art Training School, who frequently copy an object without showing any appreciation of its beauty; a matter, surely, of primary importance.

Subjects 14 *and* 22.—A book prize is awarded for a very good sheet from Adelaide, South Australia. It is satisfactory to find such work coming from the colonies.

The Examiners have again to point out the debased character of the lettering commonly used in designs sent to the National Competition.

DESIGNS, TEXTILES, HANGINGS, LACES, CARPETS, &C.—*Examiners: Mr. W. Morris; Mr. Lewis F. Day; Mr. Stephen Webb*; *and Mr. Alan S. Cole.*

Printed Hangings.—In this class there are several good attempts at bold patterns; but in each of them there is some defect serious enough to spoil its chances of a silver medal.

Cotton Prints.—This is a very disappointing show of designs after those in former years, which have been fairly good.

It is noticeable that the same sheet often contains, together with fairly good designs, others of distinctly inferior character, which goes to show a want of discrimination and taste on the part of the student.

Lace.—A considerable class of work submitted, no specimen of which reaches any great excellence, being indeed rather poor in style and lacking in invention.

Embroidery.—The embroidery designs submitted are not very good, and do not seem to show that the students producing them possess much sense of the capabilities which lie in this art.

Damasks.—The designs for damask show no appreciation of the quality of the material which should be broadly treated, and not broken up into multitudinous detail.

Carpets.—The designs for carpets this year show a great improvement upon those submitted during the last few years. Several of them, though lacking completeness, show considerable invention and a seeking after the right style.

DESIGNS, WALL PAPERS, INTERNAL DECORATIONS, STAINED GLASS, ENAMEL.—*Examiners: Mr. W. Morris; Mr. Frederic J. Shields, A.R.W.S.; and Mr. Lewis F. Day.*

Wall Papers.—The designs for wall papers compare very favourably with those of last year. They show distinct effort in the direction of invention. Definiteness of form and structure of patterns seem to have attracted the students' attention.

Painted Panels.—The Examiners regret not to be able to give more awards in this class. The works submitted to them are in all respects below the mark.

Figure Panels.—There was some promise in many of the decorative figure designs; but none of them showed that their designers had been sufficiently trained, and the quality of work was not such as to justify awards. The Examiners desire to impress upon the schools the necessity of carrying out decorative designs, which include figures, sufficiently far, both as to drawing and colour, to allow them to take their place as actual decoration, and not to be mere hints at decoration. Even designs which show most invention fall under this censure.

Internal Decorations, Furniture.—The Examiners find that this section of design attracts very few students of any talent. The designs are quite commonplace, having no originality on the one hand, nor on the other do they show any study of examples of good style.

Stained Glass.—All the designs in stained glass which have any merit in them show considerable promise in decorative figure design, but shortcomings both in drawing and in technical treatment. There is not sufficient design about the detail of the drawing. The draperies, as a rule, are very defective in this quality, which in stained glass demands so much attention.

The Examiners wish to call the attention of the students to the inadequacy of the ornamental borders in the stained glass designs. It looks as if the students have had but little training in the study of ornament. As much attention should be given to ornamental borders, as part of the design, as is given to the heads of figures and to their drapery.

As to the cartoons in general, they look rather more like enlarged drawings for book illustrations than cartoons for stained glass. The students ought to pay more attention to the recognised methods of producing working drawings for stained glass workers.

This is all the more necessary as it appears from the cartoons that students hardly understand the method of painting on glass, the foundation of which should always be firm clear strokes given by the long brush used by the glass worker.

Mosaics.—The designs for mosaics, though few in number, are generally good, and show a fair appreciation of the necessities of the materials. Some are very prettily coloured, and none of them are bad in this respect.

Metal Work.—A gold medal is awarded for a sheet of designs for scent bottle, chatelaines, needlecases, &c., designed with much delicacy and feeling, and in a manner suitable to such small objects. It is very satisfactory to see so much real care and design applied to this class of objects.

Emamels.—The designs for enamel are not very good.

Design.—Tiles, Ironwork, Book Illustrations.—*Examiners: Mr. W. Morris; Mr. Lewis F. Day; and Mr. W. de Morgan.*

Tiles.—Only a few of the numerous works submitted in this class rise to a high level of design; but in several of them which show invention, and good arrangement of colour, there is also evidence of an insight into the requirements of the process. The defect in respect of sympathy with the material rests rather with the pencil or brush work. There is little choiceness of line. Some clever sketch-designs come from the National Art Training School, but Examiners cannot undertake to make awards on mere suggestive sketches.

Pottery.—The whole class is rather poor; the work has either very little originality of design, or else is marred by deficiencies in drawing. The students in many cases appear to be misled by pleasant effects of ordinary water colour, which could not be rendered in pottery.

Ironwork.—With regard to designs for Wrought-iron Work, there is not a great deal of merit shown, and what merit there is, is principally shown in dealing with a rather late style. The Examiners think that students should extend their study to earlier and stronger work.

Book Covers.—There are very few works submitted in this branch of design The Examiners think there should be more.

ARCHITECTURAL DRAWINGS AND DESIGNS.—*Examiners: Professor G. Aitchison, A.R.A.; Mr. T. G. Jackson, A.R.A.; and Mr. J. J. Stevenson.*

Class of Architectural Sketches, Freehand.—Fewer exhibits attain excellence this year than last.

Class of Measured Drawings of Actual Structures.—In this class the Examiners would call attention to an absurd waste of time and pains in mere mechanical processes and idle repetition.

Some geometrical drawings are accompanied with explanatory sketches, a practice which is highly commendable.

The Examiners think the conventional way of representing ornament by outlines should be discouraged, the effect of ornament depending entirely on light and shade.

The Examiners further remark that as plaster ceilings, friezes, and architectural carving are essential parts of architecture, their separation into a distinct study has been one of the most potent influences in the deterioration of modern architecture.

Class of Design.—The Examiners consider that though there are, perhaps, fewer designs exhibited this year that are wholly bad, still those to which the higher awards are given are inferior to the best exhibits of last year.

The Examiners wish to repeat a remark they have already made as to the desirability of discouraging the use of half timber work as a mask in front of the real construction. Half timber construction, if employed at all, should be real.

The general impression left on the minds of the Examiners is, that the teachers do not lay sufficient stress on the study of good proportion and accurate draughtsmanship.

MECHANICAL DRAWINGS.—*Examiner: Mr. H. Graham Harris, M. Inst. C.E.*

There are several sets of drawings dealing with the design of a combined punching and shearing machine. All of these are more or less satisfactory, and all display intelligence and general appreciation of what is required. A problem such as this when worked out by a student is of great educational value to him, and this irrespective of whether he is successful in obtaining a prize or not.

Local fees.

35. The amount of the fees received from students by Schools of Art and Art Classes in the last three years has been as follows:—

Years.	Schools of Art.			Art Classes.			Totals.		
	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*
1892 - - -	33,276	4	8	14,757	10	9	48,033	15	5
1893 - - -	34,515	2	1	12,900	7	11	47,415	10	0
1894 - - -	40,384	4	3	13,837	14	6	54,221	18	9

National Art Training School.

36. *National Art Training School.*—There were 37 students in training during the session ending 27th July 1894, 3 Pupil-teachers, of whom 1 was unpaid, and 17 National scholars. Five Schools of Art have been supplied with trained masters, and 8 National scholars have left the school, having completed their course of instruction. 194 students have attended the schools without payment of fees, and 14 at half fees, these privileges having been gained by success in their studies. A total of 540 students attended the schools, viz.:—294 females and 246 males

a decrease of 18 on the previous year. The fees amounted to 1,675*l.* 17*s.*, a decrease of 204*l.* 15*s.* 11*d.* on the previous year.

37. Thirty-eight Art Master's certificates were obtained by students of the School as well as nine Art class teacher's certificates and 4 Elementary Drawing certificates. The prizes gained comprised 4 gold, 34 silver, 61 bronze medals, and 117 book prizes in the National competition and school examinations, and 27 Queen's prizes in the Art examinations. Three travelling scholarships of 50*l.* each were awarded after competition among the free students in the School.

The report of the National Art Training School is given at page 227.

Summer courses for Art Masters, &c.

38. Summer courses of instruction for Art Masters and students were again given in the Study of Ornament and Design, Modelling and Drawing from the Life, and Casting and Moulding. There were 245 applicants for admission to these courses, of whom 96 were given permission to attend. 48 attended the course of instruction in the Study of Ornament and Design, under Mr. R. Lunn. The classes for Modelling from the Life, numbering 24, and for Drawing from the Life, 24, were instructed by M. Lantéri and Miss E. M. Moore and by Mr. Morton and Miss Henniker respectively. For the first time since these courses of instruction were instituted there were separate classes for modelling and Drawing from the living model for female students. A course of lectures by Mr. Lewis F. Day on Practical Design *in its relation to trade and manufacture; present day design, style, originality, modernity; the teaching of Design, and especially Technical teaching, the process of pattern design and the way a workman sets about Designing*, and Demonstrations in casting from gelatine and in piece moulding by Signor E. Cantoni were attended by all the selected applicants. Mr. Miller was in charge of the detailed arrangements. The regularity of attendance and conduct of those attending the classes were entirely satisfactory.

Grants for buildings, fittings, &c.

39. *Grants for Buildings, Fittings, Examples, and Apparatus.*—Building grants were made during the year 1894 to the following Schools of Art, viz.:—Colchester; Batley; Gravesend; High Wycombe; Skipton; Rochester; Battersea; Aston Manor; Darwen; amounting to 3,459*l.* 10*s.* Grants for casts and examples were made to 3 schools or classes amounting in the whole to 6*l.* 3*s.* 9*d.* The grants amounted in the previous year to 2,484*l.* 5*s.* and 213*l.* 4*s.* 6*d.* respectively. The grants for apparatus and examples are now abolished except in Ireland.

Further details with regard to Art instruction will be found in the tables in Appendix B., page 72.

III.—SOUTH KENSINGTON MUSEUM AND BETHNAL GREEN BRANCH MUSEUM.

40. The Directors report that the number of visitors during 1894 was 1,057,279 at South Kensington and 591,302 at Bethnal Green, making a total of 1,648,581. This shows a decrease of 116,704 as compared with the year 1893. Returns of the numbers since 1857 are given on pages 262 and 263.

41. *Art Museum.*—In forwarding the usual annual statements by the various Museum Officers in the Art Museum, Dr. Middleton, the Director, reports as follows :—

"A great deal has been done towards the better arrangement of the objects in the Museum, especially by devoting one large Court to the magnificent collection, which, with so much generosity has been lent to the Department by Mr. George Salting, and also by the formation of an Oriental Section in the new Cross Gallery on the other side of the Exhibition Road.

'The Museum has, however, gained less space than had been hoped for owing to the great extension of the Circulation Department.

"The acquisition of the most desirable portions of the Peyre Collection in Paris, with regard to which the Museum owes so much to Mr. Armstrong, having only just been completed and all the objects not as yet received, it will be necessary to defer any full description till next year. But I cannot refrain from referring to it here, as it is long since so important an addition has been made to the Museum.

"Captain W. de W. Abney, C.B., may, I think, be congratulated on the success of his method for preventing pigments fading, by the admission of light through alternating strips of blue-green and yellow-orange glass fixed in the outer skylight. This valuable invention has been applied to the skylight above the Gallery of the Raphael Cartoons. Captain Abney has suggested a few trifling improvements, which I hope will allow of the extension of this invention to other galleries in the Museum."

Mr. C. Purdon Clarke, Assistant Director and Superintendent for Arrangement, also refers to the considerable changes that during the past year were made in the arrangement of the Museum Collections owing to the transfer of the Oriental Collections from the Museum to the new Cross Gallery.

He points out that the Saracenic, Persian, Chinese and Japanese collections now being arranged in continuation of the Indian Section (formerly the East India Company's Museum) form an Oriental Museum, which for richness and extent is unequalled in any country.

Very little additional space, however, has been gained in the Museum, the principal gallery, formerly occupied by the Oriental collections, having been cut off from the Museum, and fitted up as store rooms and offices for the Circulation Department, removed from the Old Cromwell Road Buildings to make way for the extension of the Science offices.

The transfer of the Maudslay Collection of Casts of Antique Mexican stone sculptures to the British Museum, referred to in our last Report, afforded some relief to the congested condition of the East Architectural Court—where many of the most important Italian Renaissance Casts were too closely placed; and the return of the loan collection of Lord Pelham Clinton Hope's pictures has slightly helped the Water-colour Drawings—which are still inconveniently crowded.

The Raphael Cartoon Gallery has been re-opened after re-roofing, and the arrangement of the New Tapestry Court and of the Gallery of Antique Casts completed.

42. Mr. A. B. Skinner, the Keeper of the Art Museum, reports that the number of objects acquired for this division by purchase, gift, or bequest was 933, of which 20 were for the Indian Section, and he furnishes the following list of the principal acquisitions by purchase during the year 1894:—

	£	s.	d.
A dagger of richly chiselled steel, bearing the Medici arms -	60	0	0
Two Chinese *cloisonné* vases, formerly the property of the late General Gordon - - - - - -	134	10	0
Two very interesting painted panels from a screen in St. John's Chapel, Maddermarket, Norwich - - -	50	0	0
A selection of jewellery and silversmiths' work from the Zschille Collection, which had been brought to England for sale - - - - - - - -	675	15	0
A Sicilian stole of the 12th century in a fine state of preservation - - - - - - - -	50	0	0
An iron key and a purse-mount with Gothic ornamentation of the 15th century - - - - - -	150	0	0
An Italian terra-cotta bust of a monk, bought in Paris -	69	11	11
A Venetian glass goblet, and a box overlaid with pierced Gothic work in lead, acquired in Rome - - -	78	17	3
A fragment of Flemish tapestry of the early 16th century -	63	13	4
A beautiful Etruscan gold cup, c. 5th century, B.C. - -	175	8	9
A "verdura" tapestry, bought in Rome - - -	100	0	0
A fire-place and panelling from a room in the old Palace at Bromley-by-Bow, now pulled down - - - -	225	0	0
An enamelled terra-cotta relief, attributed to Andrea Della Robbia - - - - - - -	216	12	2
Two brass salvers, made by Moslem workmen at Venice, and damascened with silver - - - - -	160	0	0
A collection of Italian works of art and a Persian carpet, acquired from Signor Bardini - - - -	1,600	0	0
Special mention may be made of the marble relief of the Virgin and Child, attributed to Pietro Lombardi.			
A cup of translucent coloured enamels with gold framework made by Monsieur F. Thesmar - - - -	71	10	10

	£	*s.*	*d.*
A varied collection from Siam, including sacrificial vessels, arms, and cinerary urns - - - - -	365	12	0
The fragments of a magnificent silk velvet cope of Persian workmanship, enriched with gold and silver thread -	420	0	0
This wonderful work of art was probably made in the reign of Shah Abbas the Great towards the end of the 16th century for the Armenian community.			
An English gun of the early part of the 18th century, elaborately decorated with silver inlay - - - -	120	0	0
A 16th century carpet of Persian workmanship - -	300	0	0
A collection of medals and plaquettes by Monsieur Oscar Roty, purchased from the artist himself - - - -	159	4	1
An old Italian banner, painted in tempera, with the Crucifixion on one side and two Saints on the other - - -	89	5	0
A collection of illuminations from old MSS., including an initial letter "M" by Girolamo dai Libri - - -	190	10	10
A choice collection of early textile fabrics, chiefly from Palermo and Lucca - - - - - - -	298	1	10
Some fragments of an old Flemish tapestry of the early 16th century from Huntingdon - - - - -	150	0	0

The principal gifts received during the year were :—

A kneeling figure in plaster of the late Prince Consort, executed and given by John Bell, Esq.

A Japanese red lacquer screen, given by T. W. Bacon, Esq.

A Swedish braid loom, given by the Countess Hamilton.

Fragments of sculpture from an Egypto-Roman temple at Koptos, given by Professor Flinders Petrie, D.C.L.

Portions of a ceiling from Damascus, given by J. Vincent Robinson, Esq., C.I.E.

An embroidered coat and breeches of the end of the 18th century, given by Mrs. F. A. Hart.

The "Barbor" jewel with an onyx cameo portrait of Queen Elizabeth, miniature portraits of William Barbor, and Miss Elizabeth Barbor, given by Miss M. Blencowe.

A stained glass window from Cairo, given by Dr. J. H. Middleton.

A collection of earthenware, chiefly painted by Lessore, bequeathed by the late Dr. Medwin.

A Venetian lace flounce, bequeathed by the late Mrs. de Merle.

The reproductions acquired in 1894 comprised 47 in plaster and 30 in metal.

Plaster Casts.—Part of the tabernacle erected by Andrea Orcagna in the church of Or San Michele, Florence, in 1359; a recumbent female figure from a tomb in the Brera, Milan; an altar-piece by Andrea della Robbia in the church of Santa Croce, Florence; a pulpit by Benedetto da Maiano in the church of Santa Maria Maddalena, Florence; and panels in low relief from the tomb of S. Antonio in the church dedicated to that saint at Padua. Casts of the carved oak framework of several windows in an old house at Delft, Holland, dated 1537; stone crosses at Ruthwell, Dumfriesshire and Nigg, Ross-shire; part of a carved oak pulpit at King's Langley Church, Hertfordshire, and a recumbent effigy of a woman from the same church.

Reproductions in Metal.—A collection of Greek and Roman coins; the silver-gilt shrine said to contain the body of St. Simeon in the cathedral of Zara, Dalmatia, and other reliquaries from the same place; and various Italian vessels in repoussé copper of the 15th and 16th centuries.

43. *Indian Section.*—In the course of the year the long store room on the west side of the Indian section was partially cleared

to receive a portion of the collection of plaster casts, made by A. P. Maudslay, Esq., in Central America, and formerly exhibited in the Architectural Court of the main Museum.

The number of visitors during the year 1894 was 173,522, as against 288,710 the previous year. The large number of visitors in 1893, was due to the fact that many people were attracted to the neighbourhood by the exhibition of the wedding presents of the Duchess of York at the Imperial Institute.

Mr. H. E. Acton, the Keeper in charge, reports:—

During the year 13 objects were purchased at a cost of 113*l.* 6*s.* Six cannon were transferred from the India Stores Depôt, and 18 books were presented by the India Office. A Burmese gold Order was presented by Mrs. [illegible].

Loans were received from Surgeon-Colonel J. B. Hamilton, M.D., R. Gordon Smith, Esq., Col. the Hon. Stapleton-Cotton, Mrs. John Evans, and Capt. D. Webb, A.S.C.

44. *Art Library.*—The attendance of readers in the Art Library continues to increase steadily; the average daily number during the year having been 83, as against 74 in 1893, and the total number 25,976, as against 22,951.

Mr. Weale, the Keeper, reports as follows:—

The opening of the Middle Room, announced in my previous report, has proved a great boon to students. No less than 531 permissions to use water-colours for from one to six days have been granted. On several occasions every seat in the room has been occupied.

Three more volumes (down to ROM) of the general Reading Room catalogue, embodying in one alphabetical series all the books acquired before September 1890, are now at the disposal of readers.

During the past year 1,881 books and pamphlets have been added to the library; 1,266 works and articles have been catalogued, and 1,885 slips printed and inserted in the Card Catalogue. The titles of fresh acquisitions have been printed regularly every week, and these weekly lists posted up in the library, so that readers are informed of and can consult any book at the latest on the Saturday of the week following that in which it is acquired.

The new general Card Catalogue of works and articles acquired or re-catalogued since August 1890, now consists of 18,728 slips (15,781 titles and 2,947 cross-references).

The first of the new Class Catalogues—Ceramics—has been placed in the Reading Room. It contains the titles of over 2,500 works and articles relating to Earthenware and Porcelain, their manufacture, ornamentation, and history. Those in each section are arranged chronologically, and added to weekly. Readers can now see at a glance what works the Library contains on any particular subject relating to this important branch of Industrial Art. An octavo edition of this catalogue is now in the press. The Catalogue of Books on Heraldry will shortly be in the printers' hands.

It is a matter of great regret that with the present insufficient staff it is quite impossible to make anything like satisfactory progress with the Class Catalogues. The slips prepared for these now number many thousands and are being added to daily, but many years will pass away before they can possibly be made available for general use.

871 prints and 576 drawings have been added to the library collections. The second portion of the Japanese Catalogue (loose prints and drawings) is now in type and will shortly be published. A catalogue of the German prints has been commenced, and 577 titles and 172 cross-references are now in type. Henceforth all prints and drawings will be catalogued as they are acquired.

3,680 photographs have been added during the year to those already in the Library, the number of which is, I am told, between seventy and eighty thousand and must have cost at least 12,000*l*. There is no catalogue and the indexing of them is as yet insufficient and incomplete.

The re-arrangement and classification of the contents of the bookcases is progressing but very slowly, as it is but seldom that I or the Assistant-Keeper, Mr. G. H. Palmer, can spare time to attend to this matter.

45. *Dyce and Forster Collections.*—Mr. Weale reports that during the past year (1894) the number of readers' visits amounted to 826; the issue of books and Manuscripts to 2,988, and of prints and drawings to 129. Compared with the previous year, these figures show a decrease of 215 in the number of readers, but an increase of 737 in the number of works consulted.

46. *Pictures in the South Kensington Museum.*—Mr. T. Armstrong, the Director for Art, furnishes the following report on the Pictures in the South Kensington Museum, with special reference to those recently acquired:—

The pictures and drawings under my charge are in good condition, and every precaution has been taken, as heretofore, for their preservation. Among the more important additions made by purchase to our collection the following may be mentioned:

The design in oil on canvas made by William Dyce, R.A., for a fresco to be painted at the east end of All Saints Church, Margaret Street;

a very fine early work in water-colour by Mr. Carl Haag;
a good example of the late Thomas Collier's work;
a large and highly finished drawing in water colour by Sir John Tenniel;
a landscape by Mr. G. P. Boyce;
a moonlight view of the Ponte Vecchio, Florence, by Mr. Holman Hunt;
a very interesting series of small cartoons for stained glass, six in number, representing scenes in the history of St. Oswald, by the late Ford Madox Brown.

There have been, as usual, a considerable number of gifts and bequests, and I have again to name Mr. James Orrock as one of the benefactors to the Museum. He has this year presented an oil painting by Henry Dawson, of whose work we had no specimen. Mr. Orrock has also given two drawings of cattle by R. Hills and a good example of his own work in water-colour.

We have also received useful gifts from a Committee formed for the purchase and distribution of cartoons by the late Ford Madox Brown.

By the bequest of the late Mr. John Hill, of Streatham, the Museum collection has been enriched by three landscape pictures and a number of framed sketches in oil by Karl Heffner, a landscape by the late Vicat Cole, R.A., and a water-colour by Mr. H. S. Marks, R.A.

The process of examining in turn all the pictures belonging to the Museum, which was recorded in the last annual report, has been continued and all those which had need of lining, varnishing, cleaning, or repairing have had the necessary attention, and I think it may be said with truth that they are generally in a good state, clean, and not likely to deteriorate rapidly.

During this process of examination of the oil paintings, those by old masters, which from time to time have come into the possession of the Department, for the most part by bequest, were put aside to be inspected by Mr. Poynter, R.A. From among them he chose a certain number which he thought suitable for the National Gallery. Of these, the most notable are the large fresco by Perugino, and a head of St. Dominick ascribed to Gentile Bellini, which latter came to the museum as part of the Soulages Collection. It has been arranged with the Trustees of the National Gallery that we have in exchange for this loan a certain number of important water-colour drawings by De Wint, Cattermole, Louis Haghe, and Turner, and twelve slight sketches by Turner.

The pictures which require attention in the Bethnal Green Museum are in their turn being now sent to South Kensington, in order that they may be cleaned or relined in our workroom under my direction.

The famous Hope Collection has at last been removed from our museum, where it has been for some years an object of attraction. Its removal will enable us to restore the small room it occupied to the historical collection of British Water-colours which, from over-crowding, has not been exhibited in a manner suitable to its importance, but the extension to be obtained from the lapse of this room to its original purpose is far from satisfying the needs for increased space.

The appearance of the Raphael Cartoons has been greatly improved by the removal from the spaces between their frames of copies of the pilasters in the Loggie and other paintings in the Vatican. I think the experiment made under Captain Abney's directions in the use of coloured glass for the skylight in order to intercept those rays which act injuriously on pigments, may be considered quite successful so far as regards the aspect of the cartoons under the mixed light.

47. *Science Museum.*—Major-General Festing, F.R.S., the Director for the Science Museum forwards the usual annual reports by the various Keepers.

48. *Machinery and Inventions Division.*—Mr. Last, the Keeper, reports as follows:—

During the year 1894 the collection in this division has been increased by the addition of 44 objects, chiefly on loan. Amongst the more interesting of these acquisitions may be mentioned:—

The original model of Murdock's oscillating engine made in 1785.

Model of Brandreth's "Cyclopede," a horse velocipede entered to compete with the "Rocket" at Rainhill in 1829. Presented by Admiral Sir Thomas Brandreth, K.C.B.

Model of the sewing machine patented by Thomas Saint in 1790. Presented by Miss Wilson, Camden Road, N.W.

A duplex combing machine and a ring-spinning frame. Presented by Messrs. Dobson and Barlow, Bolton.

Model of a large centrifugal pumping plant, by Messrs. J. & H. Gwynne.

Haag's water motor.

Model of a manual fire engine, partly in section.

Model of Bailey's hot air engine.

Model of an electric locomotive by Messrs. Beyer, Peacock & Co.

Models of Joy's radial and fluid pressure valve gears.

Several models of agricultural machines and a sectional example of a corrugated fire box, made by Messrs. Richard Garrett and Sons, Leiston.

Sectional model of a Galloway boiler.

Model of Mansfield's oil-gas producer.

In the workshop of the division, in addition to the primary duty of repairing and maintaining the various exhibits, two new models have been constructed. The first is a working model of the "Old Bess" pumping engine erected in 1777 at the Soho Works of Boulton and Watt. Portions of the old engine have for many years been in the Museum but without the model the general arrangement could not be understood. The engine pumped water on to a water wheel which drove the factory shafting, 10 years before rotary motion was directly obtained from the steam engine. The second is a model of Murdock's steam carriage of 1781. This was by permission of the owner, Mr. A. Lea, copied from the model lent by him three years ago, but recently withdrawn.

Further additions have been made to the number of models shown in motion or capable of being started by the public, the total number now so arranged being 43.

A new edition of the descriptive catalogue of the collection having become necessary, it was considered, owing to the increase in the size, that it would be better to issue it in two volumes. Volume I. was published in September last and as it treats of steam engines, railways, pumps, dynamos, and similar machines of general use, it includes the most interesting portion of the collection. Volume II., which embraces the machines used in special industries, such as mining, printing, weaving, metal working, &c., is in course of preparation.

49. *Naval and Marine Engineering Section.*—Mr. Last, the Keeper, reports :—

During the year 1894 35 objects were added to this collection, including a most interesting series of nine fully rigged models of the principal Cunard Mail Steamers, from the " Britannia " of 1840 to the " Campania " of 1893. Amongst the other recent acquisitions may be mentioned :—

Whole model of H.M.S. " Albion " (1842).
Whole model of P.S. Adder " (1890).
Whole model of the yacht " Kingfisher " (1776).
Whole model of a five-keel " Cumberland " yacht (1780).
Half block model of the steam yacht " Wanderer " (1878).
Whole model of a Burmese junk.
Whole model of the twin-screw hopper dredger " Gefion."
Whole model of a ferry steamer with elevating deck.
Whole model of a seamless steel boat.
Whole model of Green's steam lifeboat with hydraulic propulsion.
Working model of gear for letting go sheet anchors. Presented by Dr. C. Gage Brown.
Models of steel castings employed in naval construction.
Sectional model of the Harrison steam-steering gear.

50. *Collections for Scientific Instruction and Research.*—A portion of the new Cross Gallery referred to in our last Report has been allotted to these Collections, and is now occupied by the Chemical and Metallurgical Apparatus, and specimens heretofore shown in the Western Galleries. This has given an opportunity of re-arranging and more thoroughly displaying the Biological and Physiographical Collections, which had become much crowded.

Mr. A. C. King, the Keeper, reports as follows :—

Recent modifications in the Syllabus printed in the Directory of the Department for the Science Subjects comprised under Physics having made a revision of the elementary apparatus desirable, the numerous duplicate examples lent for exhibition by various manufacturers and dealers for some years past have been returned to the owners, and their place is filled by sets illustrating the courses of instruction now prescribed by the Department in elementary and advanced stages of Sound, Light, Heat, Magnetism, and Electricity.

A series of large and elaborate diagrams illustrating 50 years' work on the Experimental Farm at Rothamsted, prepared by Sir J. B. Lawes and Sir J. H. Gilbert for the Chicago Exhibition, have been lent by those gentlemen to the Museum, for a limited period, and are exhibited in the new Cross Gallery.

The number of visitors to whom special facilities for examining the apparatus have been afforded during the year is 4,058 ; this is 254 more than in 1893, and 912 more than in 1892. The rooms available for Science classes accompanied by teachers have been in great demand, especially on Saturday afternoons.

A Catalogue of the Physical Apparatus has been issued during the year—that of the apparatus, models, &c., comprised under Physiography is nearly ready.

The following are the chief additions to the Collections :—

Mechanics and Mathematics :—

1. An Atwood's Machine with electrical connexions for time recording. Made by the Cambridge Scientific Instrument Co.
2. Sets of Standard Troy and Avoirdupois Weights and Measures of Capacity. Verified by the Standards Department of the Board of Trade.
3. Models designed by Professor Perry, to illustrate the teaching of Theoretical Mechanics.
4. Professor O. Henrici's Harmonic Analyser.
5. Water Clock of the 17th or early 18th century.

Physics :—

1. Apparatus used by H. Tomlinson, F.R.S. in his researches on the "Coefficient of Viscosity of Air," and "the Influence of Stress "and Strain on the Action of Physical Forces." Lent by the Government Grant Committee of the Royal Society.

   A Toluene Thermometer for measuring low temperatures, and two other thermometers for reading minute differences. Made by Tonnelot of Paris; verified by the Bureau International des Poids et Mesures, Sèvres.

Chemistry :—

1. A Model, on a scale of ½ inch to a foot, to illustrate the manufacture of carbonate of soda, by the Leblanc process. Made by B. L. F. Potts.
2. Various pieces of apparatus used by the late Thos. Graham, F.R.S. in his principal researches between the years 1834 and 1866. Lent by Professor W. Chandler Roberts-Austen, C.B., F.R.S.

Physiography, Navigation, and Nautical Astronomy :—

1. 13 Sun-dials, &c., chiefly of the 17th and 18th centuries.
2. Collection of Instruments, lent by the Meteorological Office, including Mill's Barograph, Bate's Barometer, Galton's and Lind's Anemometers, and Campbell's Sunshine-recording Bowls.
3. Magnetarium for reproducing the phenomena of Terrestrial Magnetism. Presented by H. Wilde, F.R.S.

The eight-foot mural Quadrant from Kew is now set up in this Gallery.

Geology :—

1. Models of Brachiopods, by B. Stürtz, of Bonn.
2. Set of models of crystals, by Dr. F. Krantz.
3. Relief models of I. of Elba, I. of Vulcano, I. of Ischia, Mount Etna, Mount Vesuvius, and the district around Naples. Prepared by Amedeo Aureli, Modeller to the Italian Geological Survey.
4. Apparatus for micro-chemical analysis, arranged by Professor H. Behrens.
5. Relief Map of Palestine and Lower Egypt. Prepared by J. B. Jordan. Presented by the Duke of Sutherland.

Hygiene :—

1. Models illustrating efficient and inefficient systems of drainage. Lent by C. Campbell, of Sheffield.
2. A set of models and diagrams to illustrate the teaching of Hygiene. Published by Chapman & Hall.

Agriculture :—

Diagrams illustrating 50 years' work by Sir J. B. Lawes and Sir J. H. Gilbert, on their experimental farm at Rothamsted, St. Alban's.

51. *Science and Education Library.*—Mr. A. C. King, the Keeper, reports :—

1,989 volumes have been added to this Library in 1894, of these 321 relate to pedagogy. The purchases numbered 879, the gifts, including those from scientific and other societies, 937, and loans for exhibition from publishers, 173. The total number of volumes in the Library is 77,161.

The number of readers has been 16,[illegible], an average of [illegible] for each of the 311 days on which the Library was open. In a Table in the Appendix, page 261, is given the number during each of the last 10 years. As was pointed out in last year's report, the diminution shown in this table is probably to be mainly accounted for by the almost exclusively scientific character the Library has assumed, which renders it less attractive than formerly to the general student.

1,725 volumes were issued for the use of Professors and Assistants in the Royal College of Science during the year.

The most important recent acquisitions are under the head of Journals and Transactions of Scientific Societies, in which this Library is now exceptionally rich.

A Supplement to the Catalogue of Scientific Books, showing the additions to the Library during the last four years is ready for publication.

52. *Heating, Lighting, &c.*—Major-General Festing, F.R.S., reports that the "Cross" Gallery has been taken over from H.M. Office of Works during the year. The floor space amounts to 19,100 superficial feet. The gallery is not at present opened to the public in the evening; no arrangements have therefore been made for lighting it. The heating is effected by steam supplied from the boilers of the Imperial Institute. For this 300*l.* a year has to be paid to that body.

The working expenses (including repairs) of the electric lighting in those parts of the South Kensington Museum so lighted (about 109,000 superficial feet) amounted during the past year to 1,178*l.* The consumption of gas for lighting the rest of the Museum (about 30,000 superficial feet) is at the rate of 8,000 cubic feet, costing 1*l.* 3*s.* per hour, the hours of lighting having been only 650, a smaller number than usual on account of the comparative absence of fog. The total consumption of gas in the whole premises (including the schools) has been 17,340,100 cubic feet, costing 2,640*l.* The expenditure on coke for the heating apparatus of the various buildings at South Kensington, with a total superficial space of about 530,000 feet, was 961*l.*, and on labour and repairs of apparatus 685*l.*

The mean temperature of the permanent buildings of the Museum while artificially heated was 60·05°, that of the outside air having been 46·91.°

The following table gives an abstract of the records for the whole year of the temperature in certain parts of the Museum and out of doors:—

—	Diurnal Variation.		Temperature.		
	Max.	Mean.	Min.	Mean.	Max.
	°	°	°	°	
Competition Gallery - -	9	2·93	48	60·37	76
New Sheepshanks Gallery -	7	2·50	53	61·88	77
Raphael Gallery - - -	5	2·44	55	60·54	64
Western Gallery - - -	13	4·84	46	61·50	78
North Court (Centre) - -	9	3·12	54	61·39	75
South Court (East side) - -	8	2·72	53	61·39	74
South-east Court - - -	5	2·36	49	60·59	73
On Screen, out of doors - -	28	10·75	15	51·34	84

The working expenses of the electric lighting apparatus at the Bethnal Green Museum have amounted to 603*l.*, the floor space being 53,500 feet. The expenditure on coke for heating this Museum has been 51*l.*, and on labour 25*l.*

53. *Circulation.*—Mr. H. M. Cundall, Keeper in charge of this section, reports that the applications from the authorities of provincial Museums for the loan of objects steadily increases. During the past year the total number of such Museums assisted by loans, changed annually, has risen from 43 to 50.

The following eight institutions received such collections for the first time :—

Aberdeen.—Art Gallery and Museum.
Carlisle.—Public Library, Museum and School of Art, Tullie House.
Dover.—Corporation Museum.
Dundee.—Free Library, Museum and Art Gallery, Albert Institute.
Ipswich.—School of Science and Art, Museum and Free Library
Poole.—School of Science and Art, Free Library and Museum.
Portsmouth.—Corporation Museum, the Old Guildhall.
Rotherham.—Corporation Museum, Clifton Park.

A collection has been temporarily removed from the Blackburn Free Library and Museum, in consequence of its being closed for the erection of additional galleries.

The Department invites the authorities of the provincial institutions to specify the nature of the objects they desire to have on loan, but owing to the increasing number of these Museums and the long period for which the collections are lent, it is yearly becoming more difficult to meet the special requirements of each locality.

Nineteen temporary Exhibitions were assisted with loans of objects during the year. At four of these, viz., Brighton, Cheltenham, Ipswich, and Manchester, a selection of the works by students, which gained prizes in the National Art Competition, were lent for short periods.

The details of the loans to provincial Museums and to temporary Exhibitions are given in Table 1, page 248.

The number of objects, paintings, books, &c., lent to Schools of Art and Art Classes for the purpose of study, is shown in Table 2, page 250.

The Catalogue of books available for loan, which, as mentioned in the last Report, had been issued to Schools of Art, appears to have been of service to the Schools, as the number of books applied for and issued during the year has been nearly double that of the previous year. Additional books have been transferred from the National Art Library for this purpose and a revised Catalogue is being printed.

The number of Science Schools receiving loans of scientific apparatus was 37, the details of which are given in Table 3, page 254.

The total number of objects, &c., on loan at Museums, Exhibitions, Schools of Science and Art, and Art Classes for various periods during the year was 28,884, being an increase of 610 over the previous year.

54. *Grants in Aid to Provincial Museums.*—Four Museums received grants in aid from the Department towards the purchase of objects. A return showing the manner in which the grant was allocated is given in Table 5, page 256.

55. *Branch Museum, Bethnal Green.*—Mr. C. H. Derby, who joined the South Kensington Museum in 1866, and who has been the resident officer in charge of this branch Museum since 1890, has lately retired under the age clause of the Order in Council of August 1890. No permanent arrangement has yet

been made for filling his place. The officer at present in charge has furnished the following particulars :—

> The total number of visitors for the year amounted to 595,422, making a grand total since the opening of the Museum in 1872 of 12,702,374, and exceeding the 1893 return by 4,348.
>
> During the year 7,347 persons, and as usual most of them children from the neighbouring board schools, made notes or sketches, preference being given to the collection of humorous drawings by the late George Cruikshank.
>
> Two small collections of Spanish enamelled earthenware and glass were received on loan from the Señor Juan F. Riano. A collection of ecclesiastical vestments, brocades, and other textiles, was lent by Captain Myers.
>
> Several additions, notably some old Japanese bronzes, were made to the Massey-Mainwaring loan-collection. An oil painting by Dudley Hardy entitled " Homeless," was also received, temporarily.
>
> Numerous dried foliage specimens have been added to the food collections, prepared from cuttings of spices and other economic plants supplied by the Royal Gardens, Kew.
>
> A collection of compressed tabloids of tea and various narcotic and digestive agents were presented by Messrs. Burroughs, Wellcome & Co.
>
> Sprays of ornamental featherwork, from Rio de Janeiro, were given to the animal products collection by Mrs. E. Watt.
>
> 1,054 new and revised labels were added to the food and animal products collections.
>
> 262 applications to inspect the Doubleday collection of Lepidoptera were received: this shows a slight increase on the previous year, and brings the total to 16,060 since it was received here in 1876.

IV.—OTHER MUSEUMS IN CONNEXION WITH THE DEPARTMENT OF SCIENCE AND ART SUPPORTED BY THE STATE.

Museum of Practical Geology.

56. *Museum of Practical Geology, Jermyn Street.*—From the Report of the Director of this Museum, Sir Archibald Geikie, F.R.S., it appears that considerable improvement has recently been effected in the arrangement of the building and ornamental stones in the hall of the Museum. New cases have been introduced for the display of stones showing a fissile structure, rendering them serviceable for paving and roofing, such as flagstones and tile-stones. A collection of bricks, manufactured in this country, with samples of the clays used in their production, is in course of formation and has already acquired considerable proportions. A large collection of mineral phosphates, used in the preparation of manures, has been lately presented, and is arranged in some new cases in the gallery of the Model Room. Several geological photographs, with explanatory keys, have been mounted in the upper gallery. A general handbook to the Museum has recently been prepared and other handbooks are in progress. Lists of donations to the Museum are given at page 299.

57. The Curator of the Museum, Mr. Rudler, reports that the number of visitors during the year was 45,504, viz., 30,848 in the mornings and 14,656 in the evenings. The Museum is now open free on every week day, the old restriction whereby it was closed on Fridays having been recently removed. Further details will be found in the Report of the Director at page 267.

58. *Edinburgh Museum of Science and Art.*—During 1894 the Museum sustained a great loss in the sudden death in March of the Curator, Mr. Alexander Galletly, who, since the very commencement of the Museum in 1855, had been one of its most zealous and efficient officers. The vacancy thus caused was filled by the appointment of Mr. David J. Vallance to the post of Curator.

Many additions were made in the course of the year to the Museum Collections, the most important of which was Professor Heddle's rich collection of Scottish Minerals comprising upwards of 7,000 specimens, acquired partly by gift and partly by purchase, as explained in the Director's Report, page 301. Among the other gifts may be noted, woods and herbarium specimens collected by Dr. Aitchison, C.I.E. in Kashmir in 1893; Siamese collection of silver-mounted weapons, silver personal ornaments, obsolete and current money, stone cetts, &c., by F. H. Smiles, Esq., Bangkok; Eskimo rayak fully equipped, and other native objects from Lancaster Sound, given by W. Livingstone-Learmouth, Esq., Parkhall, Polmont; and among the purchases, a model illustrating the application of the Leblanc process to the manufacture of carbonate of soda and the production of other chemical substances, scale ¼ inch=1 foot; a gold enamelled and jewelled dagger, shiraz work, of the beginning of the 19th century; a silver-gilt dessert bowl, decorated with gadroons and repoussé floral devices, English, *circa* 1771; two water-colour drawings of Edinburgh at the beginning of this century, attributed to P. Nasmyth; a Gothic casket with iron cover; a gilt and engraved metal casket (German), with fitted drawers; an original wax medallion, in relief, portrait of Thomas Carlyle, by the late Sir Edgar Boehm, Bart., R.A.; and plaster casts of a long frieze in the Great Hall of Xerxes, and two figures in relief from doorways in the Palace of Darius, Persepolis.

Casts were successfully taken of the richly sculptured Runic cross at Ruthwell, Dumfriesshire, and of the Celtic sculptured cross slab at Nigg, Ross-shire.

In the gallery of Scottish Geology and Mineralogy considerable progress was made with the arrangement of the Heddle Collection, and its incorporation with the previous collection of Scottish minerals, the greater portion of which had been presented to the Museum by the late Mr. Patrick Dudgeon, of Cargen.

In the Natural History section the arrangement and labelling of the exhibited collection of birds has been completed, and maps illustrative of the geographical distribution of each family have been placed in the cases. Twelve coloured drawings of birds extinct within comparatively recent times have been suspended in the gallery. Maps to show geographical distribution have also been prepared, and placed throughout the collection of Mammalia. Many additions have been made to the collections, both by donation and purchase.

The number of visitors to the Museum during 1894 was 377,397 as compared with 349,689 in the previous year. The Report of the Director, Major-General Sir R. M. Smith, K.C.M.G., will be found at p. 301.

59. *Dublin Museum of Science and Art.*—The Report of the Director, Dr. V. Ball, C.B., F.R.S., will be found on page 318, and that of the Board of Visitors at page 341.

The attendance at the Museum has risen from 367,645 in 1893, to 483,010 in 1894, or nearly half a million. This represents a daily average for 363 days of 1,330·6 persons.

The average Sunday attendance has slightly increased from 979 to 982·6. The highest week-day attendance was 4,222 on the 15th August, and the highest Sunday attendance was 2,024 on the 14th January.

Some parts of the building are, the Director reports, becoming overcrowded, and the question of additional space for the expansion of the Museum will soon have to be seriously considered if the collections of Industrial Art are to be properly exhibited.

60. *Art and Industrial Department.*—In this section there have been numerous additions in the ordinary way besides which the remainder of the collections belonging to the Museum of Irish Industry have been transferred from the Royal College of Science.

The Ethnographical collection has been enriched by a very extensive loan of weapons from the South Sea Islands (Cook collection) and other localities, deposited by the Board of Trinity College. Since their arrival these objects have all been identified and labelled. The general collection which has been thus added to is now one of the most extensive in the United Kingdom.

61. *Royal Irish Academy Collections.*—Good progress has been made in the arrangement of the above collections—and a number of additional specimens, acquired by the Academy, were transferred to the Museum during the year.

62. *Natural History Department.*—The block of buildings, containing besides the old theatre of the Royal Dublin Society the offices of the Natural History Museum, having been demolished, in order that a new lecture theatre might be erected on the site, new offices have been erected for the Natural History Department.

There have been some important changes in the arrangement of the invertebrate collections, by the preparation of diagrammatic keys, which, it is believed, will afford facilities to students who desire to instruct themselves in the structure of the lower orders of animals.

63. *Geological and Mineralogical Collections.*—The former, under the general direction of Sir A. Geikie, F.R.S., have been further arranged and are now about to be provided with a descriptive guide, which will to some extent be a handbook to the Geology of Ireland.

Some valuable additions to the Mineral collections, including presentations from the British Museum, have been made during the year.

64. *Herbarium.*—Some important contributions to this section were also received from the British Museum, and from several well-known Irish Botanists during the year. The economic collections continue to prove attractive to visitors.

65. *Royal Botanic Gardens, Glasnevin.*—These gardens have been maintained in excellent order; but attention is again called to the want of special houses for the succulent plants and the tropical ferns.

There has been a falling off in the attendance of 16,329, as compared with 1893, the numbers having been respectively 409,028 in 1893, and 392,699 in 1894; but the latter is upwards of 15,000 higher than that of 1892, and the larger attendance in 1893 may probably be attributed to the exceptionally fine summer season of that year.

The average Sunday attendance was 5,386·5 in 1893 and 5,176·6 in 1894. The highest attendance on Sundays was on the 25th November, when 9,600 visited the gardens, chiefly attracted by the chrysanthemums then in bloom. The lowest Sunday attendance, 29, was on the 13th of May.

66. *National Library.*—The revised rules for the management of the Library which had been approved were put in operation during the year.

There was a considerable increase in the attendance of readers which rose from 113,888 in 1893 to 119,500 in 1894, the daily average being respectively 388 and 403·7.

67. *Metropolitan School of Art.*—There is evidence of continued improvement in almost every department of the school. Some changes which have been made in the teaching staff have acted satisfactorily in leading to increased activity and energy in the classes. Payments are no longer made on results in the school, but it is noteworthy that the last payment was more than double what it was ten years ago.

The School did well in the successes achieved and the prizes carried off by its students at the last annual examination. These were given to the students at a public distribution which was held in January.

The total number of students was 482, or 23 more than in 1893; of this number 174 attended the Day and 308 the Evening Classes.

V.—GEOLOGICAL SURVEY OF THE UNITED KINGDOM, &c.

Geological Survey, England and Wales.

68. *England and Wales.*—From the Report of the Director-General of the Geological Survey it appears that the area surveyed amounts to 760 square miles, with 3,565 miles of boundary-line. A portion of the Staff is engaged in the centre and south of England upon a survey of the Drift deposits, and making also such revisions in the Solid Geology as are found necessary. The re-survey of the South Wales coal-field has made satisfactory progress, and that of the North Staffordshire coal-field has been commenced. Good progress has also been made with the mapping of the Isle of Man. The fourth volume of the general Memoir on the Jurassic Rocks of Britain has been published—"The Lower Oolitic Rocks of England, Yorkshire excepted," by Mr. H. B. Woodward; and great part of the fifth volume is in type. One sheet of Horizontal Sections (No. 148) has been published; this illustrates the geology of the Durham coal-field, and has been prepared by Mr. H. H. Howell and Mr. D. Burns. MS. copies of 22 six-inch Maps have been deposited in the Office for public reference.

Scotch Survey.

69. *Scotland.*—The total area surveyed during the year amounts to 584 square miles, with 4,222 miles of boundary-line. The field-work has been devoted mainly to the area of the Highlands, and the mapping has also been carried on in Skye and Raasay, in Islay, Jura, and adjacent islands. Some important revisions have been made of the Silurian uplands in the south-west of Ayrshire; and additional information has been obtained for the new edition of the one-inch map of the Fifeshire coal-field, Sheet 40, which has now been prepared for the engraver. Sheet 12 of the one-inch map, embracing the southern end of Cantyre, has been published. During the past year 817 slides of thin sections of rocks for microscopic examination, have been prepared; and now the total number of such slides of Scottish rocks, properly arranged and indexed, amounts to 5,951.

Irish Survey.

70. *Ireland.*—During the course of the re-surveys in Mayo and Galway an area of 117 square miles has been revised and 222 miles of additional boundary-line have been traced. The examination of the Silurian areas in Louth and County Down has resulted in the discovery of numerous fossils, some of them in localities that had not previously yielded any organic remains. Hence important data have been obtained for tracing the subdivisions of the rocks. A large amount of information has also been obtained respecting the Igneous rocks of Carlingford and Slieve Gullion. The preparation of duplicate copies of the original field-maps has been continued, and these copies of the six-inch maps are deposited in the Office for reference by the public. The whole of the field-work has also been reduced on

the general map of Ireland to the scale of four miles to an inch. One sheet of Horizontal Sections (No. 35) has been published. It illustrates the structure of the county of Donegal. The Handbook to the Geological Survey collections in the Dublin Museum of Science and Art, which has been prepared by Mr. W. W. Watts, with the aid of Mr. A. McHenry, is now in the press.

Further details are given in the Report of the Director General at p. 267.

THE COMMITTEE ON SOLAR PHYSICS.

Committee on Solar Physics.

71. In response to our invitation Sir G. G. Stokes, Bart., F.R.S., rejoined the Committee, accepting the position of its permanent Chairman.

The Committee report that they continue their work on the following lines :—

Sun observations.

(*a.*) The organisation of observations of the sun at various parts of the earth's surface.

Photographs.

(*b.*) The organisation of a system of daily photographs at various observatories, including Greenwich, on a larger scale than that hitherto attempted.

Early observations of Solar spots.

(*c.*) The collection and discussion of the earliest observations of solar spots since the employment of photography.

Actinometric observations.

(*d.*) The introduction of actinometric observations at great heights, and the discussion of the best means both of making and recording such observations.

Spectroscopic observations.

(*e.*) The spectroscopic observations of solar spots with reference to the chief lines widened in each.

Laboratory experiments.

(*f.*) Laboratory experiments in connexion with the observations made on the sun since the introduction of the new method.

Carbon spectra.

(*g.*) Observations and photographs of the spectra of different compounds of carbon, with the view of determining the true nature of the carbon which is known to exist in the sun's atmosphere.

Low temperature spectra.

(*h.*) Observations of spectra which are visible at low temperatures, and comparisons of the same with the spectra of certain celestial bodies.

Spectra of meteorites.

(*i.*) Experiments on the spectra of meteorites under various conditions, with the view of investigating the possible meteoritic origin of the sun, as well as of all other celestial bodies.

The sun's place amongst the stars.

(*k.*) Observations and photographs of the spectra of the various orders of celestial bodies, with the view of determining the true place of the sun amongst them.

Eclipse observations.

(*l.*) The organisation of eclipse observations, and the discussion of the records obtained by them.

Spectra of metals.

(*m.*) The construction of a new map of the spectra of metals, Rowland's photographic map of the solar spectrum forming the basis.

Sun-spot spectra, &c.

(*n.*) Discussion of sun-spot spectra in relation to the latitude of the spots.

(*o.*) Discussion of meteorological observations in relation to the observations of sun-spots and their spectra.

(*p.*) Photographs of the solar atmosphere by the spectroheliograph.

(*q.*) Photographs of sun-spot spectra.

A report to the Solar Physics Committee by Professor J. Norman Lockyer, C.B., F.R.S., appears on page 348.

72. *Royal Hibernian Academy of Arts.*—The annual exhibition of works was held from March to June. 142 season tickets were issued, as against 156 in the previous year. The day admissions at 1*s.* were 2,736, as against 2,544, and the evening admissions at 1*d.* were 8,408 as compared with 9,803 in the year 1893. During the nine Sundays that the Exhibition was open there were 1,877 admissions at 2*d.*, against 1,346 for the eight Sundays it was open in 1893. Further details are given in Appendix K., page 345.

Royal Hibernian Academy.

VI.—TECHNICAL EDUCATION.

73. The Return, somewhat modified from that of last year, relating to the application of funds by Local Authorities to the purposes of Technical Education (including Science, Art, Technical and Manual Instruction) is in preparation and will, it is expected, be presented to Parliament during the present session. This Return will show the amount actually expended on Technical Education during the year 1893–4, and the estimated expenditure during the year 1894–5, by Local Authorities in England and Wales, Scotland, and Ireland, out of funds derived from the residue received under the Local Taxation (Customs and Excise) Act, 1890, and from rates raised under the Technical Instruction Acts, 1889 and 1891, and under the Public Libraries' Acts. The Return will also include information with regard to the application of funds by Welsh Local Authorities to the purposes of Intermediate and Technical Education under the Welsh Intermediate Education Act, 1889.

74. Since the date of our last report 27 Minutes have been issued under Section 8 of the Technical Instruction Act, 1889, and 6 Minutes under Section 4 of the Technical Instruction Amendment (Scotland) Act, 1892, sanctioning various subjects of instruction on the representation of Local Authorities that they were required by the circumstances of the respective districts. The names of the Local Authorities which applied for these Minutes are given at page 3 of the Appendix. The total number of Minutes issued by the Department is now 309, viz.:—302 under the Act of 1889 and 7 under the Scotch Act of 1892 (the latter number not including any Minutes which may have been issued by the Scotch Education Department).

A list of the subjects which have been sanctioned since the Acts were passed, is given in the Appendix, page 1.

75. During the past year grants, amounting to 1,860*l.* 0*s.* 8*d.*, have been made to six schools in Ireland, in aid of Technical Instruction given under the regulations issued in 1892. These grants—a list of which will be found at page 4 of the Appendix—were on account of instruction given during the school-year 1893–4 in subjects other than those for which the Department

gives aid under the general rules of the Science and Art Directory.

76. Following the practice adopted in our 40th and 41st Reports, it may be well to record here a few of the decisions and opinions given during the past year on the more general questions which have arisen under the Technical Instruction Acts:—

(1.) Replying to an inquiry from a County Council as to the manner in which aid might be granted for instruction in Nursing (sanctioned by Minute for the district), having regard to the opinion given in § (11), page lxii of the 41st Report relative to the education of Nurses, it was stated that, in the opinion of the Science and Art Department, it would be a legitimate expenditure under the Technical Instruction Acts for the County Council to aid lectures or classes for general instruction in Nursing, open to all persons in the district who wished to attend. But that, in view of the restriction in Section 8 of the Act of 1889 with regard to teaching the practice of a trade or employment, the County Council could not legitimately apply funds—in the form of scholarships or otherwise—in the training of Nurses to act professionally.

(2.) With reference to communications received from several Local Authorities, urging that swimming, gymnastics, Swedish drill, and other forms of physical training, might be sanctioned as subjects of technical instruction, a reply was given that the question has been re-considered, and that the Department must adhere to its decision that those subjects do not fall within the definition of technical or of manual instruction in Section 8 of the Act of 1889.

(3.) A County Council having applied for a Minute authorising instruction in the "Science of common things" (one of the subjects of the Evening Continuation School Code), it was pointed out that it could scarcely be called a subject of technical instruction, but that if the instruction under that head were covered by the subjects of the Science and Art Directory, it would not require special sanction by Minute.

(4.) That the Department would be prepared to sanction a suggested course of instruction on the "Growth of the Colonial Empire," on the understanding that it be in the main Commercial History and Geography, and, as such, covered by Section 8 of the Technical Instruction Act, 1889.

(5.) With reference to a proposal made by a County Council (whose district includes a part of the coast where the fishing industry is carried on), for the establishment of a station for fish hatchery outside its district, an opinion was given that the establishment of such a station would not be of such assistance to the technical instruction of fishermen belonging to the district as to justify a grant being made towards its support; and that the proposed grant out of the funds at the disposal of the County Council would not be a legitimate expenditure under the Technical Instruction Acts.

(6.) In reply to an inquiry from the Secretary of a Technical School, whether admission to classes in Practical Plumbing and Carpentry, established under the provisions of the Technical Instruction Acts, could be restricted to persons who are apprentices to plumbers or carpenters, or are sons of *bonâ fide* plumbers or carpenters, or men actually working at the respective trades, he was informed, as had been stated in the House of Commons in answer to a question on the 18th May, 1893 "that the objections raised " by trade unions had considerable weight. It is not the " function of technical education, as understood in England, " to teach trades, but rather to supplement workshop " practice by a knowledge of scientific or artistic principles " connected with certain industries. That being so, it may " be reasonably held to be undesirable to admit to certain " kinds of technical classes those who have not the foundation of workshop practice. If a number of amateurs " were admitted to such classes, the teaching given would " have to be distorted, or even largely changed. It is " mainly a question of organisation for the governing " bodies concerned."

(7.) That there is apparently nothing in the Technical Instruction Acts to prevent a Local Authority from making grants to Central Schools or Classes, in aid of the instruction in technical subjects of Pupil Teachers employed in Elementary Schools.

(8.) That a Local Authority may legally award Exhibitions on a competitive examination in the "Science and Art of Teaching," if the subject has been sanctioned for the particular district by a Minute issued in accordance with Section 8 of the Technical Instruction Act, 1889. But that the Local Authority would not be justified in making such Exhibitions tenable by Queen's Scholars at Day Training Colleges and the Universities, for the purpose of giving the Scholars a general education.

(9.) That the proceeds of a rate levied by a Local Authority under the Technical Instruction Acts and the residue funds received by a Local Authority under the Local Taxation (Customs and Excise) Act, 1890, can legally be applied towards the erection of a School or College for the purposes of Technical Education.

(10.) That the restrictions applying to grants made by a Local Authority in aid of technical or manual instruction are contained in the Technical Instruction Acts, 1889 and 1891, and that (subject to compliance with Sub-section 1 (1) (*a*) of the Act of 1889) there is no limitation in those Acts with regard to the social position of students who may receive technical or manual instruction aided by the Local Authority.

(11.) That funds at the disposal of a County Council for the purposes of Technical Education might be applied in awarding prizes to students of a class aided or conducted by the County Council for proficiency in Science, Art, or Technical subjects taught therein. Prizes might, therefore, be awarded at competitions in agricultural processes if such competitions were confined to persons who had been taught by instructors appointed by the County Council. But the offer of prizes for manual dexterity at an agricultural competition apart from class instruction would not be a legitimate application of funds under the Technical Instruction Acts.

77. As we intimated in our last report, the increase in the Inspectorate has made it possible to offer a more active assistance to Local Authorities who adminster the funds placed at their disposal for the purposes of Technical Education. And with the object of securing co-operation between those bodies and the newly-appointed Inspectors, we addressed a Circular Letter in April, 1894, to the Council of each County and County Borough in England and Wales, and to each County Council in Scotland, notifying the appointment of the Inspector for the particular district. In the Circular Letter we asked whether it would be of service to the Council to receive extracts from the Inspector's reports upon Science and Art instruction when they related to Schools or Classes aided by the Council, and, further, whether the Council would wish that the Inspector should also inspect and report on the more purely technical work carried on in the Schools which he may be inspecting for the Department; at the same time stating that we were not fully prepared to extend the latter arrangement to every locality.

78. The offers then made have been accepted by the larger proportion of the County and County Borough Councils in England and some of those in Wales and Scotland; and during the session 1894–5 extracts from over 700 reports of Inspectors have been furnished to the Local Authorities which have asked for the assistance of the Department in this direction. We propose to continue in future to meet as far as possible the wishes of the Local Authorities in this matter, as there can be no doubt that the information thus placed at their disposal will assist them to satisfy themselves that their aid is judiciously given.

VII.—INSPECTORS' CONFERENCES.

[illegible] 79. In order to afford to the inspectors under this Department an opportunity for the discussion of their duties, together with certain general questions of administration, a conference took place at South Kensington on July 7th, at which all the inspectors were present. The work of the conference was directed chiefly to the consideration of certain questions proposed by the inspectors themselves or arising out of the inspection of schools and classes in their respective districts. Annual conferences should prove eminently useful for such purposes, and they will furnish means of obtaining local information which it would be otherwise difficult to obtain except by lengthened correspondence, and they afford a useful means for the interchange of ideas amongst the inspectors themselves.

VIII.—EXPENDITURE OF DEPARTMENT.

Expenditure of Department.

80. The expenditure of the Department during the financial year 1894–95 amounted to 698,522*l.*, which was apportioned as follows: expenses of administration, including central staff, office expenses, &c. 41,650*l.*; direct payments, prizes, &c. to encourage instruction in Science, 152,852*l.*; direct payments, prizes, &c. to encourage instruction in Art, 66,313*l.*; services common to both Science and Art instruction, 75,860*l.*, Institutions supported or aided by the State through the Department of Science and Art, 59,708*l.*; the South Kensington and Bethnal Green Museums, including the expenses of circulation of Science and Art objects to country institutions, 86,008*l.*; Payments for Instruction in Public Elementary Schools and Training Colleges in Drawing, 213,772*l.*; Grants in Aid of Local Museums 499*l.*; these grants being irrespective of objects lent from the Central Museum; and Grants in Aid of Technical Instruction 1,860*l.*

All which is humbly submitted to Your Majesty.

Signed this 27th day of June 1895.

(L.S.)

ROSEBERY.
ARTHUR H. D. ACLAND.

J. F. D. DONNELLY,
Secretary.

APPENDICES.

APPENDIX A.

Appendix A.

MINUTES, CORRESPONDENCE, AND REPORTS.

MINUTES, CORRESPONDENCE, AND REPORTS.

A LIST OF THE SUBJECTS WHICH HAVE BEEN SANCTIONED SINCE THE PASSING OF THE TECHNICAL INSTRUCTION ACTS, 1889 AND 1891, AND THE TECHNICAL INSTRUCTION AMENDMENT (SCOTLAND) ACT, 1892.

Agricultural engineering (including driving and working steam engines and machinery).
Agriculture (practice of) and agricultural processes (including demonstrations and experiments for agricultural instruction; practical farm work; vegetable and fruit growing; fruit storing; market gardening; glass houses; management of live stock; dairy work and cheese making; thatching; fence and mow-making; sheep-shearing; hedging; ditching; rick-making; shepherding; under-draining; stacking; ploughing).
Alkali manufacture.
Ambulance work.
Art needlework.
Baking and confectionery.
Banking (principles of) and financial science.
Bee-keeping.
Bent iron work.
Bleaching, dyeing and printing.
Boat-building.
Book-binding.
Book-keeping and commercial terms; office work.
Boot and shoe manufacture and repairing (including pattern cutting and clicking).
Bread-making.
Brewing.
Bricklaying.
Brick-making.
Cabinet and furniture making and design.
Carving in wood, stone, and other materials.
Carpentry and joinery.
Carriage building (road and rail).
Casting and moulding in plaster, gelatine, &c.
Cider and perry making.
*Civil engineering.
Coal tar products.
Commerce, principles of.
Commercial law, history, geography, arithmetic, and correspondence.
Cookery.
Designing for porcelain, pottery, and glass.
Designing for textile fabrics, silks, and calico.
Designing for printing and lace.
Designing for metal work and vases.
Designing for book-binding.
Domestic economy.
Dressmaking (including household sewing and cutting-out).
Economic science.
Elastic web manufacture.
Electrical engineering—electric lighting and transmission of power; electrical instrument making.
Electro-metallurgy.
Enamelling.
Engraving.
Entomology.
Etching.
Farriery
Fish culture, fishing, and subjects connected therewith (including the manufacture and preservation of nets, tackle, and apparatus for catching fish).

---

* Sanctioned under the Technical Instruction Amendment (Scotland) Act, 1892, only.

TECHNICAL INSTRUCTION SUBJECTS SANCTIONED—*cont.*

Forestry.
Framework-knitting and hosiery.
Fretwork and turning.
Fuel.
Gardening.
Gas manufacture.
General tool making.
Gilding.
Glass manufacture.
Goldsmiths' work, and manufacture of personal ornaments.
Hand-spinning and weaving.
Hat manufacture.
Horticulture and arboriculture.
Hosiery manufacture.
House painting and decoration.
Illuminating and heraldic painting.
Insurance.
Iron and steel, the manufacture and working of.
Iron and brass-founding.
Kindergarten, theory and practice of.
Lace-making and manufacture.
Laundry work.
Leather preparation and leather industries.
Manual and theoretical instruction in wood- stone- brick- metal- leather- glass- clay- basket- wicker- and fancy straw-work.
Marquetry work.
Mat and rug making.
Milling (flour manufacture).
Mechanical and architectural drawing.
Mechanical engineering.
Metal colouring and bronzing.
Metal-plate work.
Mine surveying.
Mining (including quarrying; raising, preparation, and dressing of ores) and prospecting.
Modelling in various materials.
Modern languages—French, German, Spanish, Italian, Portuguese, Norwegian, Swedish, Danish, Russian, Irish, Welsh.
Music—Singing and musical notation; instrumental and orchestral music.
Needlework, embroidery and crochet.
Netting.
Nursing.
Oils and fats, including candle manufacture.
Oils, colours, and varnishes, manufacture of.
Oyster culture.
Paper manufacture.
Pattern making.
Pharmacy.
Photography.
Plasterers' work.
Plumbing.
Political economy.
Pottery and porcelain manufacture.
Poultry-keeping.
Précis writing.
Principles of education as applied to the teaching of technical subjects.
Printing (including typography, lithography, &c.).
Repoussé work.
Road-making (principles of).
Rope-making.
Sail-making.
Sanitary science and engineering.
Seamanship.
Ship carpentry and joinery.
Silversmiths' work (including plate and plated wares).
Shorthand.
Sloyd.
Soap manufacture.
Spirit manufacture and rectification.
Sugar manufacture.
Surveying, levelling, and taking out quantities.
Tailors' work and cutting-out.
Teaching, science and art of.
Telegraphy and telephony.
Textile fabrics (spinning, weaving, and silk throwing).
Tools, use of.
Turnery.
Type-writing.
Upholstery.
Veterinary science.
Watch and clock making.
Wool, the preparation and treatment of.

Appendix A.

MINUTES, CORRESPONDENCE, AND REPORTS.

LIST OF LOCAL AUTHORITIES for which MINUTES have been issued during the year 1894–95, sanctioning special subjects of Technical Instruction under Section 8 of the Technical Instruction Act, 1889, and Section 4 of the Technical Instruction Amendment (Scotland) Act, 1892.

(1.) Technical Instruction Act, 1889.

ENGLAND.

Bedfordshire.
Bedford County Council (4th Minute).

Buckinghamshire.
Buckingham County Council (4th Minute).

Cheshire.
Chester County Council (5th Minute).

Cornwall.
Cornwall County Council (5th Minute).

Durham.
Durham County Council (4th Minute).

Gloucestershire.
Gloucester County Council (4th Minute).

Hampshire.

STATEMENT showing the grants made by the Department of Science and Art during the year 1894, in aid of Technical Instruction in Ireland.

School to which Grant was made.	Amount of Grant.		
	£	s.	d.
Dublin, Pembroke Technical School, Ringsend - -	437	0	0
,, Royal Irish Association for Promoting the Training and Employment of Women	300	0	0
,, City of Dublin Technical School - -	670	17	2
Belfast, Technical School - -	250	0	0
Cork, Crawford Technical School - -	148	3	7
Galway, City of Galway Technical Institute -	275	19	11
Total - - -	[illegible]	[illegible]	[illegible]

The amount of the grant in each case was equal to the sum contributed to the School by the Local Authority out of the rates under the Technical Instruction Acts, and expended on approved subjects of technical instruction during the school year 1893–94.

LIST OF SCHOOLS TRANSFERRED TO LOCAL AUTHORITIES since the passing of the Schools for Science and Art Act, 1891, to end of 1894.

Altrincham, Literary Institution.
Barnstaple, School of Science and Art.
Bath, School of Science and Art.
Birkenhead, School of Science and Art,
Bolton, Mechanics' Institute.
Brighton, School of Science and Art.
Derby, School of Science and Art.
Dover, School of Science and Art.

Hyde, Mechanics' Institute.
Newbury, Literary and Scientific Institution.
Rochdale, Technical School.
Rotherham, School of Science and Art.
Ryde (I. of W.), School of Science and Art.
Salisbury, School of Science and Art.
Stockport, Technical School.
Warrington, School of Art.

(*Circular issued to Schools.*)

CAPITATION GRANTS IN ORGANISED SCIENCE SCHOOLS.

SIR, November 1894.

I AM directed to acquaint you that a question having arisen as to the interpretation of that part of section 26 at page 34 of the Science and Art Directory (revised to June 1893) which requires that a student, in order to qualify for a capitation grant, shall pass "in one of the subjects of Science "laid down for his year in which he has not previously passed or obtain a "higher success in a subject in which he has already been successful," the Lords of the Committee of Council on Education have decided that a student of an Organised Science School who obtains the result "Fair" in a subject of Science included in the year's course to which he belongs, and in which he has not previously passed, shall be held to have satisfied the specified condition. This decision will also apply to section 27 of the Directory which refers to Night Organised Science Schools.

I am further to state that any supplementary claim for capitation grants which the above interpretation of the rule above referred to may necessitate will be considered if sent in, duly certified, on a supplementary copy of Form 51B in the ordinary course.

I am, &c.
(Signed) J. F. D. DONNELLY.

RULES FOR ORGANISED SCIENCE SCHOOLS.

1. An Organised Science School is one in which the instruction is carried on methodically according to one or other of the courses laid down in the following rules or according to a course which has been specially submitted to and approved by the Department. The work of the Organised Science School may be carried on either in day classes or in evening classes, but no Organised Science School will be recognised as such unless it has at least 20 students at its formation, nor will it continue to be recognised beyond two years after its formation unless it has a fair proportion of students taking the advanced course.

2. An Organised Science Day School must provide a thorough and progressive course of education in Science combined with literary or commercial instruction adapted to students whose education is such as would fit them to

enter Standard VII. of the English code for a Public Elementary School. The Committee of the Organised Science School will be required to certify that no payment is claimed on account of any student (*a*) who has not passed out of Standard VI. of a Public Elementary School in England or Scotland or the 2nd stage of the 5th class in Ireland, or (*b*) who has not received an education equivalent to the above in some other school before entering the Organised Science School.

3. The courses of instruction for students of an Organised Science Day School of either sex are given in sections 5, 6, 7, and 8. Some of the subjects specified are obligatory on all students; and some of the courses are alternative to suit different categories of students.

4. In the Organised Science Day School every student upon whom the variable grant (*see* section 12 (2)) is claimed must be presented in the obligatory subjects of Science, in the obligatory Art subject, in at least one language, and also in some literary or commercial subjects which have been approved in the time-table submitted to the Department. Not less than 13 hours per week must be allotted to instruction in the Science and Art subjects, and not less than 10 hours for the other subjects, including two hours for Manual Instruction.*

5. COURSE FOR MEN STUDENTS.

Elementary Course.

1. Elementary Mathematics (as in Stage I., Sub. V.).
2. Elementary Physics, including the fundamental principles of Mechanics (theoretical and practical).
3. Elementary Chemistry (theoretical and practical).
4. Freehand Drawing.
5. Elementary Practical Geometry.

Obligatory.

This course may extend over two years, which will afford sufficient time for such thorough and progressive instruction in that which must be looked upon as the basis of their future studies in Science as will fit the students for the advanced course.

Reasonable latitude will be allowed to the teacher as to the nature of the course he may pursue provided the instruction is sound, satisfactory in amount, and combined with proper practical work. The Practical Chemistry for the first year's course should include the setting up of apparatus, weighing and other chemical manipulations, the preparation of gases, the estimation of volume, and so on. Analysis should occupy a secondary position. The experimental work in physics and the principles of mechanics should be as far as possible quantitative in character, and should lead to numerical results. It should be simple in character and of sufficient variety to keep up the interest of the students. Further, it must be understood that the above course is the obligatory minimum, and that it is not to be taken as a limit; so long as these subjects are fairly taught there is no objection to their being added to or expanded. Thus besides Freehand Drawing may also be taken Model Drawing; and under Practical Geometry, Mechanical Drawing may be taken.

Advanced Courses.

6. On the completion of the elementary course the work of the students should be specialised in one or other of the following advanced courses which have been drawn up for the Physical, Chemical, Mechanical, and Biological Divisions. Other special advanced courses, such as for Mining and Agriculture, may be sanctioned, but they must be previously submitted to the Department for approval.

---

* This last condition will not come into force till after the commencement of the school year 1897.

Physical and Chemical.

1. Mathematics, Subject V., Stage 2, 3, or 4.
2. Geometry, Subject I., Advanced Stage.
3. *a.* Sound, Advanced Stage.
   b. Light, „ } Subject VIII.
   c. Heat, „
   d. Magnetism and Electricity, Subject IX., Advanced Stage.
4. Inorganic Chemistry, Subject X., Theoretical and Practical.

} Obligatory.

5. Theoretical Mechanics, Subject VI., Division I. or II.
6. Physiography, Subject XXIII.
7. Organic Chemistry, Subject XI., Theoretical and Practical, 1st Stage.
8. Subjects of Art Instruction (*see* syllabuses, pp. 262–290 of the Science and Art Directory).

It is only necessary that one of the four sub-divisions of Physics should be taken, but whichever sub-division is taken practical instruction in it must be given. The choice of one of the additional subjects, Nos. 5–8, is left to the school.

In Geometry, Subject I., the Elementary Stage may be taken provided that a fair proportion of the students are instructed in the Advanced Stage.

The Theoretical Chemistry must be the Advanced Stage of the Directory, but the Practical may be either the Elementary or Advanced Stage.

Mechanical.

1. Mathematics, Subject V., Stage 2, 3, or 4.
2. Geometry, Subject I., Advanced Stage.
3. Heat, Subject VIII.*c.* Advanced Stage (with Practical Instruction).
4. Theoretical Mechanics, Subject VI., Divisions I. and II.
5. Building or Machine Construction, Subject II. or III.

} Obligatory.

6. Applied Mechanics, Subject VIII.
7. Inorganic Chemistry, Subject X., Theoretical and Practical, as above.
8. Subjects of Art Instruction.

Biological.

1. Geometry, Subject I., Advanced Stage.
2. Physiology, Subject XIV., with practical work; or
   General Biology, Subject XV., with practical work.
3. Botany, Subject XVII., with practical work.
4. Inorganic Chemistry, Subject X., Theoretical and Practical, as above.

} Obligatory.

5. Magnetism and Electricity, Subject IX., Advanced Stage, with practical work.
6. Mathematics, Subject V., Stage 2, 3, 4.
7. Sound, Light, or Heat, Subject VIII.A, B, or C, Advanced Stage.
8. Hygiene, Subject XXV.
   In the Mechanical and Biological courses the same proviso as regards Subject I. will apply as in the Physical and Chemical course.
9. Subjects of Art Instruction.

7. COURSE FOR WOMEN STUDENTS.

If it be considered more desirable, one of the courses prescribed for men may be adopted for women in lieu of the following:—

Elementary Course.

1. Elementary Mathematics.
2. Practical Geometry.
3. Chemistry, Elementary, Theoretical and Practical.
4. Freehand Drawing.
5. Elementary, Physiology and Hygiene, or
6. Elementary Botany, or Elementary Physiography.

} Obligatory.

Appendix A.

MINUTES, CORRESPONDENCE, AND REPORTS.

The time-table must also include such subjects as Cookery, Household Management, Dressmaking, French, English Literature, History, and Geography.

8. *Advanced Course.*

1. Mathematics, Subject V., Stage 1.	Obligatory.
2. Geometry, Subject I., Elementary or Advanced Stage.	
3. Hygiene, Subject XXV.	
4. Physiology, Subject XIV., or Botany, Subject XVII., both with practical work.	
5. Physiography, Subject XXIII.	
6. Model Drawing and Shading from the Cast.	

In Physiology and Botany the Elementary Stage may be taken for the backward students provided that a fair proportion of the students are instructed in the Advanced Stage.

The time-table must also include besides the subjects of Science some such subjects as are indicated in the elementary course or others which are suitable for women.

9. Where the stage of the subject to be taken is not stated in the Advanced Courses for men and women, either the Elementary or the Advanced or the Honours stage may be taught: except in those subjects which form the Elementary Course. In these the Advanced or Honours stage must be taken in the Advanced Course unless where special exceptions are shown

10. The course of instruction for students who have completed one or other of the above courses must be submitted to the Department for approval. It must be in continuation of the course which the student has already followed. But the time devoted to literary subjects and Manual Instruction may be curtailed to 6 hours per week.

11. After the commencement of the school year in 1897 Manual Instruction must form part of the Elementary and Advanced Courses for men.

12. The payments to Day Organised Science Schools will be made partly on the results of inspection and partly on examination. They will be as follows :—

(1.) An attendance grant of 1*l.* 10*s.* per 400 attendances on all students who attend the full course of instruction and make not less than 250 attendances during the school year. The attendance grant will be calculated as follows :—The number of attendances of all students who make not less than 250 will be added together and the total will be divided by 400. The attendance grant cannot be claimed on account of scholars on the register of a school under the English or Scotch Education Departments, or the Commissioners of National Education, Ireland.

(2.) A variable grant on each student of 35*s.*, 30*s.*, and 25*s.* The award will be made on the school as a whole and the grant will be calculated on the number* of those students who, having earned the attendance grant, are presented to the Inspector at his annual inspection.† The award will be based on the report by the Inspector of his inspection of the obligatory science, literary, and other subjects of the authorised time-table.

(3.) A grant for practical work, which will not exceed in the Elementary course 30*s.* for Physics and 30*s.* for Chemistry on account of each student who earns the variable grant, and which will not exceed 50*s.* for Physics and 50*s.* for Biological subjects on account of each student in the advanced course who earns the variable grant.

The amount of the grant‡ will depend on the efficiency (1) of the laboratory, (2) of the equipment, and (3) of the practical instruction.

---

* In cases of absence of students from the annual inspection owing [illegible] grant.

† For the purposes of this award there will be at present a fixed Annual Inspection, which [illegible] estimate the eff[illegible] than one inspection during the year may be substituted for the fixed annual inspection

‡ Details as to this grant will be given in the Instructions to Inspectors.

(4.) Payments on the results of the examination of the Department in Science—when claimable—will be made on the following scale, and subject to the general conditions applying to the May examinations :—

(*a*.) 1*l*. 10*s*. for a pass in the Elementary Stage of any subject;

(*b*.) 3*l*., and 1*l*. 10*s*. for a first or second class respectively in the Advanced Stage;

(*c*.) 5*l*., and 2*l*. 10*s*. for a first or second class respectively in Honours; except :—

(*d*.) in Practical Inorganic and in Practical Organic Chemistry, and in Practical Metallurgy, the payments will be 2*l*. for a pass in the Elementary Stage, and 4*l*. and 2*l*. 10*s*. for a first or second class respectively in the Advanced Stage; and in Mathematics, 1*l*. 10*s*. for a pass in Stage 1, 2*l*. and 1*l*. 10*s*. respectively for a first or second class in Stages 2 and 4, 3*l*. and 2*l*. for a first or second class respectively in Stage 3, 4*l*. and 3*l*. for a first or second class respectively in Stages 5, 6, and 7, and 4*l*. and 3*l*. respectively for a first or second class in Honours.

(5.) Payments on the results of examinations in the Subjects of Art Group A. (except the Elementary Stage of Freehand) and in Perspective, in an Organised Science School, will be the same as those for Art Schools and Classes at the May examinations (*see* pars. 18 and 27 of the Science and Art Directory) and subject to the same conditions as apply to those payments with the exception that the general attendances of students will suffice to support claims for such payments. In respect, however, of Art Subjects other than those in Group A. and Perspective, attendances must be registered in the ordinary register (Form No. 486B), and the teacher of the Organised Science School must be qualified according to the Art rules for such other subjects before payments on results of examination in them according to the May rates, are allowed.

(6.) Payments on Manual Instruction will be on the scale laid down in Form 813, page 100, of the Directory.

13. Payments on results on the above scales and subject to the same conditions will also be made on account of students in the advanced and higher courses on the results of the May examinations. But payments will not be made on account of any one student in more than five subjects of Science instruction.

14. The attendance and variable grants are only payable for four years in all on account of any one student.

15. No student in the Elementary Course is required to sit at the May examinations, and no payments will be claimable on the results of the examination in May of such student. Any student on whom an attendance grant has been paid will be ineligible to earn payments in the Elementary Stages of the obligatory subjects of the Elementary Course on the results of the May examinations.

16. The school year is held to terminate on the 31st July for both Day and Night Organised Science Schools.

17. In the Organised Science Night Schools the course of instruction must be on the same lines as those prescribed for Organised Science Day Schools, but the teaching of literary subjects is not compulsory. It is not necessary that the student should take within the year all the subjects prescribed in the Day School course. The course for the Organised Night School should, as far as possible, be arranged to carry forward the instruction given in the Evening Continuation Schools of the district.

18. An Organised Science Night School may receive—

(1.) An attendance grant of 10*s*. per 60 attendances on account of each student who attends the full course of Science instruction in at least one Science subject in addition to Mathematics, Drawing, or Geometry, and makes not less than 40 attendances during the School year.

(2.) A variable grant of 13*s*., 10*s*., and 7*s*., on each student who having earned the attendance grant is presented for examination by the Inspector in the selected subjects of the year.

(3.) Payment for practical work as in 12 (3).

19. Payments on results at the May examinations both in the Elementary and Advanced Courses may be claimed on the students of an Organised

Science Night School on the same scale as that laid down for the Organised Science Day School. The attendance and variable grants may be earned for three years in each course. Payments are not made in these night schools on Manual Instruction.

Payments cannot be claimed in respect of the same student's attendance at a Day and also at an Evening Organised Science School.

20. In order that a school may be recognised as an Organised Science School it is necessary—(1) that an application be made on Form 122 before the 1st August in each year submitting a time-table of the school framed in accordance with the foregoing rules; that such time-table be approved by the Department; and that a copy of it be conspicuously exhibited in the class-room: (2) that a special register (Form No. 486*d*) be kept, in which not more than two attendances are counted for any one student on any one day, and (3) that the requisite hours of instruction per week are allotted to the literary subjects and to the subjects taken under the Science and Art Department.

21. The inspection of the Organised Day Science Schools will be conducted by one or more Inspectors of the Department between the beginning of May and the end of July, and of the Evening Schools somewhat earlier in the school year. Three weeks' notice of the date of inspection will be given. The mode of examination will be at the option of the Inspector and may be either partly or entirely *vivâ voce*, or by papers.

22. The co-operation of one of H.M. Inspectors of Schools may be requested in the examination of the literary subjects, or if provision is made for examination in these subjects by some public examining body for that particular school, the report of that examining body, if submitted, may be considered if the Department so decide in awarding the grant.

23. Reasonable latitude will be allowed for two years while the change is being made from the present to the new system.

24. If the Organised Science School be an Endowed School the grants to it will be liable to reduction under section 20, p. 32, of the Science and Art Directory.

Relaxation of rule as to Examination or Registration of Pupils in Elementary Schools receiving aid from the English or Scotch Education Departments.

(*Circular issued to Schools.*)

Sir, November 1894.

I am directed to inform you that the Lords of the Committee of Council on Education have had under their consideration the representations of certain schools as to the difficulties entailed upon them by the provisions of section 11, page 29, of the Science and Art Directory, which lays down that—

> "No pupil in an Elementary School receiving aid from the English "or Scotch Education Departments may be presented for examination "by the Department of Science and Art, or registered in any subject "of Science, unless he has *before 1st November preceding the* "*examination* been placed altogether in Standard VII. of the English "Code or has passed Standard VI. of the Scotch Code."

Their Lordships have decided to relax this rule for the present session and not to exclude from registration, or from the Science examinations of 1895, any pupil who on or before the 1st January 1895 "has been placed "altogether in Standard VII. of the English Code or has passed Standard "VI. of the Scotch Code."

This relaxation will apply to the Science examinations of 1895 only.

I am, &c.

(Signed) J. F. D. Donnelly.

Grants for Manual Instruction in Elementary Schools and in Organised Science Schools.

(*June* 1894.)

1. Grants are made by the Department of Science and Art towards the maintenance of classes for Manual Instruction, in connexion with Elementary

Schools in which drawing is taught under the Rules in Form No. 1294; or in connexion with Organised Science Schools.

2. These grants are subject to the conditions laid down in paragraphs 4, 5, and 21 of the rules in Form No. 1294, relative to grants for drawing in Elementary Schools.

3. The instruction must be—

(*a*) carried on continuously throughout the school year for two hours weekly;*

(*b*) in the use of the ordinary tools used in handicrafts in wood or iron;

(*c*) given out of school hours† in a properly fitted workshop; and

(*d*) connected with the instruction in drawing, that is to say, the work must be from drawings to scale previously made by the scholars.

The intention of the rule laid down in paragraph 3 (*a*) is that the Manual Instruction should be given continuously throughout the school year for two hours weekly, to all scholars in respect of whom a grant is to be claimed; and that scholars in respect of whom a grant is to be claimed, but who are in attendance on the ordinary instruction for a part only of the school year, should also receive manual instruction for two hours weekly throughout the whole period of their attendance on the ordinary instruction.

4. The instruction may be given by one of the regular teachers of the school, *or centre at which the Manual Instruction is given*, if he is sufficiently qualified; if not, he must be assisted by a skilled artisan, *and care must be taken to make such arrangements as will insure the maintenance of good order and discipline.*

5. The work of the class will be examined by an Inspector of the Department, accompanied, if necessary, by an artisan expert, on the occasion of his visit to examine in drawing.

6. If it appears that the School is properly furnished with plant for instruction, and that the instruction is good, a grant *at the rate of 2d. a lesson, with the addition of* 20 *per cent. if the instruction is* excellent, will be made for every scholar instructed, provided *that the Managers certify*—

(*a*) that he *has been placed in the 5th or a higher Standard of the Education Code;*

(*b*) that he has received manual instruction for at least two hours a week for *not less than* 15 *weeks* during the school year, *and while he was a scholar of the Elementary Day School attending that school with reasonable regularity;* and

(*c*) that a special register of attendance is kept and supervised by the managers of the school.

7. The grant may be reduced or wholly withheld at the discretion of the Department if it appears that the plant is insufficient or that the instruction is not good.

8. The managers of the school must inform the Department of Science and Art as soon as manual instruction is commenced in connexion with their school. (Apply for Form No. 620.)

9. If the instruction for which the grant is made be for a period other than a year, the grant will be increased or diminished by one-twelfth for each month more or less than a year. *But no grant will be made unless the instruction has been given continuously for at least 22 weeks, and then only for the first year in which manual instruction is commenced.*‡

10. In an Organised Science School the grant for manual instruction can only be earned on account of a student who has made 250 attendances, and been presented at the Science and Art examinations of the year.

---

* *The "two hours" may include half-an-hour weekly for the special drawing required under paragraph* (3) (*d*).

† This condition will be held to be satisfied if the time-table of the school shows that for every scholar in the school 20 hours in each week, irrespective of the time assigned to manual instruction for which a grant is claimed from the Department of Science and Art, are given to the other subjects prescribed by the Codes of the English and Scotch Education Departments.

‡ Rescinded by Minute of 27th November 1894.

CORRESPONDENCE RELATIVE TO PROPOSED REFORM IN TIME RECKONING.

COLONIAL OFFICE to the DEPARTMENT of SCIENCE AND ART.

Colonial Office, Downing Street,
June 26, 1894.

SIR,

I AM directed by the Marquess of Ripon to transmit to you to be laid before the Lords of the Committee of Council on Education a copy of a despatch from the Governor General of Canada enclosing a memorial from a Joint Committee appointed by the Canadian Institute and the Astronomical and Physical Society of Toronto advocating that the Astronomical and Nautical Days should be arranged everywhere to begin at Mean Midnight, and that this change should take effect on the first day of next century.

G. G. Gen. No. 163. 6 June '94.

I am, &c.
(Signed) JOHN BRAMSTON.

(ENCLOSURE.)

Canada, Government House, Ottawa,
June 6, 1894.

MY LORD,

I HAVE the honour to enclose a copy of a Memorial I have received from a Joint Committee appointed by the Canadian Institute and the Astronomical and Physical Society of Toronto, together with copies of a report drawn up by them, and dated the 10th May 1894, with reference to the Astronomical, Civil and Nautical days.

2. I trust that it may be found possible to give a favourable consideration to the recommendations as set forth by the Memorialists, and I would point out that on a former occasion a similar representation, in the form of a memorandum on time reckoning by Mr. Sandford Fleming, C.M.G., was referred to the Science and Art Department, whose officers are no doubt familiar with the various aspects of the question.

I have, &c.
(Signed) ABERDEEN.

The Most Hon,
The Marquess of Ripon, K.G.
&c. &c. &c.

(ENCLOSURE.)

To His Excellency the Right Hon. the EARL OF ABERDEEN, Governor General of Canada.

The Memorial of the Canadian Institute and the Astronomical and Physical Society of Toronto.

HUMBLY SHEWETH,

THAT whereas your Memorialists have long felt it to be a matter of common interest to the maritime nations of the world to have the reckoning of time simplified by carrying into effect the sixth resolution of the Washington International Conference of 1894, which reads as follows, viz.:—"The Conference expresses the hope that as soon as may be practicable the Astronomical and Nautical Days will be arranged everywhere to begin at Mean Midnight."

And whereas there is a consensus of opinion that this resolution should take effect at an important chronological epoch, such as the beginning of the new century, now close at hand, your Memorialists have, therefore, felt that as the Nautical Almanac is usually prepared four or five years in advance a general understanding to make the change should not be delayed.

And whereas your Memorialists, more than a year ago, appointed a Joint Committee specially to consider the subject in all its bearings and to obtain the opinions of the Astronomers of all nations respecting the proposed change.

And whereas your Memorialists have obtained the opinions of Astronomers of nearly all civilised nations, your Memorialists have the honour to submit to your Excellency the Report of the Joint Committee in respect thereto.

And whereas it appears to your Memorialists that there is a preponderating weight of opinion in favour of the proposed change.

Therefore your Memorialists humbly pray that your Excellency will be pleased to bring the matter to the attention of the Home Authorities with the view of modifying the Nautical Almanac in accordance with the proposed change which it is proposed should take effect on the first day of the new century.

Your Memorialists further pray that your Excellency will be pleased to invite Her Majesty's Government to take such steps as may be deemed advisable to obtain the assent of other nations to the proposed arrangement by which Civil Time will everywhere be substituted for Astronomical and Nautical Time.

And as in duty bound your Memorialists will ever pray.

(Signed) J. C. HAMILTON,
Vice-President, the Canadian Institute.

(Signed) ALAN MACDOUGALL, Secretary.

(Signed) JOHN A. PATERSON, M.A.,
Vice-President, the Astronomical and Physical Society of Toronto.

(Signed) G. E. LUMSDEN, Secretary.

UNIFICATION OF THE ASTRONOMICAL, CIVIL, AND NAUTICAL DAYS.

Report of the Joint-Committee of the Canadian Institute and the Astronomical and Physical Society of Toronto.

COMMITTEE:

Sandford Fleming, C.M.G., LL.D., C.E.—*Chairman.*

Arthur Harvey, Esq.	Charles Carpmael, M.A., F.R.A.S.
George Kennedy, M.A., LL.D.	John A. Paterson, M.A.
Alan Macdougall, M. Inst., C.E.	G. E. Lumsden, Esq.

The Joint Committee, appointed by the Canadian Institute and the Astronomical and Physical Society of Toronto, have the honour to report on that branch of the subject of time reckoning specially referred to them.

The unification of the reckoning of the day has long been under consideration. Sir John Herschell, in his "Outlines of Astronomy," alluded to the advantages which would result from bringing into agreement the Civil, the Astronomical, and the Nautical Days. He pointed out that the adoption of the Civil Day for Astronomical purposes would but slightly inconvenience Astronomers, and that in a question which concerns all other classes of men, Astronomers should resolve to act on general principles and cheerfully submit to a small inconvenience in view of the far wider interests which would be benefited. "Uniformity," he said, "in nomenclature and mode of reckoning " in all matters relating to time, space, weight, measures, &c., is of such vast " and paramount importance in every relation of life as to outweigh every " consideration of technical convenience or custom."

The Civil Day begins at midnight and ends at the midnight following. The Astronomical Day begins at noon of the Civil Day and continues until the following noon. The Nautical Day concludes at noon of the Civil Day, having commenced at the preceding noon.

It is obvious that any given date extends over, or into, three different days. Take, for example, Wednesday, June 13th. By Astronomical and Nautical reckonings, only half of this date in each case is on Wednesday; the first half of June 13, according to Nautical reckoning, is on Tuesday, June 12, while

Appendix A.
—
MINUTES,
CORRESPONDENCE
AND REPORTS.

the second half of the same date (June 13th), according to Astronomical reckoning, is on Thursday, June 14th, Civil Time.

In this we have the elements of confusion, and it is not surprising that the Washington International Conference of 1884 recommended that the Civil Day should take the place of the Astronomical and Nautical Days for all purposes. The recommendations of the Washington Conference must be held to carry weight, as this assembly comprised representatives of Science from 25 nations specially called together to consider questions of time reckoning. Among them were Astronomers of world-wide fame, as well as men who held high rank as navigators. They were unanimous in the opinion that as soon as practicable the Astronomical and Nautical Days should be arranged everywhere to coincide with the Civil Day.

The Civil Day is the reckoning used by the generality of mankind. It is the exact mean between the Astronomical and Nautical Days, and differs precisely 12 hours from both. To effect a complete coincidence, it is only necessary to shift Astronomical and Nautical Days each 12 hours, and this shifting will bring both to the Civil Day. Many ships have already abandoned Nautical Time and date their logs according to Civil reckoning; all ships would use the one reckoning only, if the Nautical Almanac and Ephemerides generally were arranged for Civil Time. There can be no doubt whatever that the marine of all nations would benefit by the change.

If we consider the subject simply in its relation to the Nautical Almanac and Navigation, the unification of time reckoning would simplify the calculations of mariners and reduce the chances of error. One correspondent (Dr. Johnston of McGill University) points out very truly "that the omission of " even a single step in an oft-repeated process of calculation has an obvious " advantage; when the simplification removes at the same time that most " dangerous source of error, an ambiguous expression, it becomes a great " gain." He says that the subject resolves itself unto a question of practical utility, viz., what is the greatest good of the greatest number? The Nautical Almanac, as its name implies, is for the use primarily of navigators, who are very numerous and yearly increasing. Compared with the men who guide the floating tonnage of the world, Astronomers are extremely few in number, and Astronomers as a class are skilled calculators; moreover, Astronomers can make their calculations under the most favourable circumstances, consequently with the least liability to error, as they are removed from the disturbing influences to which seamen are frequently exposed.

The Joint Committee considered it important to ascertain how far Astronomers generally would support the proposal which would practically abolish the Astronomical Day. On April 21st, 1893, a circular was issued to Astronomers of all nations, inviting replies to the following question, viz.: "Is it desirable, " all interests considered, that on and after the first day of January 1901, the " Astronomical Day, should everywhere begin at Mean Midnight?" The Circular was sent to every Astronomer whose name appears in the general list of Observatories and Astronomers prepared by Mr. Lancaster, of the Royal Observatory of Brussels, with the following result:—171 replies in all have been received, a complete list of which is appended; of these 108 are in favour and 63 are not in favour of the proposed change. Many of the former are strongly and earnestly in favour of the adoption of the Civil Day for Astronomical purposes, while the writers of some of the latter seem to have been under a misapprehension. They object to the adoption of the Civil Day on the ground that its division into two series of 12 hours, designated A.M. and P.M., would be inconvenient for Astronomers. It is obvious that this objection has no weight, as the 24 hour notation would remain associated with Astronomical reckonings as at present; moreover, indications are not wanting that the Astronomical practice of counting the hours in a single series from 1 to 24, will gradually win its way into general favour in civil life. The 24 hour notation has already been introduced into use over wide districts in Canada, in the whole of Italy, and throughout the Indian Empire, and there is a movement in Europe, in Australia, as well as in the United States of America, especially among railway men, to bring this mode of reckoning the hours into general use.

Appendix A.

MINUTES,
CORRESPONDENCE,
AND REPORTS.

In classifying the replies from Astronomers according to the countries from which they have been received, the votes for or against the change stand as follows:—

IN FAVOUR OF THE CHANGE.

Austria.
Australia.
Belgium.
Canada.
Colombia.
England.
France.
Greece.
Italy.
Ireland.
Jamaica.
Madagascar.
Mexico.
Roumania.
Russia.
Scotland.
Spain.
United States.

UNFAVOURABLE TO THE CHANGE.

Germany.
Holland.
Norway.
Portugal.

According to this classification of the Astronomers heard from, those of 18 countries are in favour and those of four are against the adoption of the recommendations of the Washington International Conference of 1884 with respect to the Astronomical and Nautical Days. If we compare the shipping of the countries thus classified (and the shipping has an important relation to the Nautical Almanac), we find that the first list, that is to say, the countries in favour of adopting the Civil Day for Astronomical purposes, represents $\frac{17}{20}$, or 85 per cent., of the tonnage of the world's marine.

Thus it appears that there is a preponderating weight of opinion among Astronomers themselves that a change should be made in the Astronomical Day. The Joint Committee, therefore, feel warranted in recommending that the Home Authorities be informed of the facts and that a respectful appeal be made to have the Nautical Almanac adapted to the change, proposed to take effect at the beginning of the coming century. The Joint Committee are of opinion that the proper course is to lay before his Excellency the Governor General a respectful memorial asking his Excellency to bring the whole matter to the attention of the Imperial Government in order that some common international understanding may be reached, by which all nations shall assent to the change; and in order that the Nautical Almanac which has to be prepared four or five years in advance may be made conformable to the change.

All which is respectfully submitted.

SANDFORD FLEMING,
Chairman,
Joint Committee of the Canadian Institute and
the Astronomical and Physical Society of Toronto.

Toronto, 10th May 1894.

Replies received to the following Question sent April 21*st*, 1893, *to the Astronomers of all Nations.*

"Is it desirable, all interests considered, that on and after the first day of January 1901, the Astronomical Day should everywhere begin at Mean Midnight?"

Admiralty to the Department of Science and Art.

Sir, Admiralty, July 30, 1894

I am commanded by my Lords Commissioners of the Admiralty to transmit herewith copy of a letter which has this day been addressed to the Colonial Office, in reply to correspondence in which it is advocated that the Astronomical and Nautical days should be arranged everywhere to begin at Mean Midnight from 1st January 1901.

I am, &c.
(Signed) Evan Macgregor

(Enclosure.)

Sir, Admiralty, July 30, 1894.

With reference to my reply of 11th instant, $\frac{\text{M.}}{4809}$ to your letter of 26th ulto. and its enclosure, in which it is advocated by a Committee appointed by the Canadian Institute and the Astronomical and Physical Society of Toronto that the Astronomical and Nautical days should be arranged everywhere to begin at Mean Midnight, the change to take effect from the first day of next century, I am commanded by my Lords Commissioners of the Admiralty to request that you will inform the Secretary of State that they cannot regard as authoritative a list of names of Astronomers and other gentlemen who have given an opinion on the question of changing the calculation of Astronomical time, which list omits nearly the whole of the names of leading Astronomers in the world.

My Lords would refer the Marquess of Ripon to a letter from this office to the Science and Art Department, dated *5th January 1886, copy of which is enclosed, and especially to paragraphs 12 and 13 thereof, observing that until their Lordships receive the official views on the proposed change of France, Germany, the United States, Austria, Spain, Portugal, Brazil, and Mexico, nations which publish Astronomical Ephemerides,—they are unable to consider the question of authorising alterations of the Nautical Almanac in the manner suggested.

I am, &c.

(Signed) Evan MacGregor.

The Under Secretary of State,
Colonial Office.

Appendix A.

Minutes, Correspondence, and Reports.

REPORTS OF INSPECTORS OF SCHOOLS AND CLASSES UNDER THE DEPARTMENT OF SCIENCE AND ART.

Mr. Gilbert R. Redgrave, Chief Senior Inspector, reports—

The changes in the inspectorate described in the report of their Lordships are now being gradually introduced, and they will involve the substitution of a permanent for a temporary staff. The alterations in question will extend over two years, and during this period there is in some cases a divided administration. I am pleased, however, to be able to report that almost without exception the work has been satisfactorily arranged, and the new staff has during the course of the past year zealously performed its duties. My own time has been mainly devoted to the training of the newly-appointed inspectors, and to the administrative details at headquarters involved by these changes. I should therefore prefer to postpone for the present my observations upon Science and Art teaching which has been largely dealt with by other members of the inspectorate.

Mr. F. B. Barwell, Senior Inspector, reports as follows on the Schools, and Drawing in Training Colleges—

The change being effected in the maintenance and management of Schools of Art is due to their gradual transference from the older committees to the various town or county councils throughout the kingdom. The latter naturally possess the command of funds considerably beyond the powers of the former, and can therefore support the schools without so much dependence on the grants of the Department. They have thus been able to build and open many important institutions of the kind much superior to those which preceded them.

The teachers whose anxious efforts were directed mainly to grant-earning, upon which their incomes largely depended, are now very generally paid fixed salaries, with, in some cases an added bonus or small per-centage of the grant on results, with a consequent change to the more healthy ambition of achieving honours at the National Competition.

Many of the new schools form part of a Technical Institution, and where this is the case the whole establishment gains, inasmuch as in far the greater number of handicrafts a drawing or a model, often both, is the preliminary step to manufacture. It might, indeed, be asserted with some truth, that without a School of Art a Technical Institute is altogether incomplete. Another advantage consists in the greater chance of attracting the bonâ fide artisan, and inducing him to take up drawing, for where the School of Art is isolated it has always been found difficult to ensure the attendance of such students. They are apt to look upon the Art School as intended for and attended by people belonging to higher social levels, and as not being sufficiently applicable to their needs. Branch schools nearer their homes are found to be more successful in this respect. The establishment of evening classes limited to handicraftsmen and apprentices above the age, say, of 17, may be recommended. It is extremely difficult to induce men in the building trades, such as joiners, masons, house painters, &c. to enter the Schools of Art in any numbers, yet where such lectures as are given, as for instance, by the Messrs. Busbridge and their assistants, they will attend freely.

One noticeable feature in Art Schools is the large proportion of women students, especially in the important towns.* They appear to be more industrious than the males, and more assiduous in attendance, a circumstance due, perhaps, to more regular habits. They contribute greatly to the National Competition, and, though generally outstripped by a few of the men in the higher branches of Art, their average of excellence is, I am inclined to think, above that of the male students.

A very large number of those attending Schools of Art throughout the country are teachers and pupil-teachers from elementary and other schools, seeking to acquire the lower certificates. The interests of these students are, in my opinion, better provided for in the Schools of Art proper than in those which have been established and controlled by a School Board.

Coming now to the drawing in Training Colleges, I may say that though the number of subjects taken precludes a high standard, there has, nevertheless, been a considerable improvement since my first acquaintance with these institutions. The teachers are, as a rule, better qualified than formerly, and the addition of Light and Shade has certainly given the students a greater interest in drawing.

Principals appear to be unanimous in thinking the blackboard drawing the most important of all the drawing subjects, an opinion I am inclined to agree with. It is a severer test of real drawing power than any subject in the present D. certificate and is the most backward.

Art masters continue to value highly the privilege of attending the summer courses at headquarters, and the practice of circulating a large proportion of the selected works from the National Competition is most useful, and should serve, among other things, to point out to some of the lady students in the provinces that there are many delightful branches of Art which they would find more serviceable for the adornment of their homes than painting bad pictures, or, still worse, copying chromo-lithographs.

Mr. C. A. Buckmaster, Senior Inspector, reports—

The present report covers a period of 16 months from January 1894 to the end of April 1895. During that time I have inspected nearly all the science schools in Norfolk and Suffolk, in the west, north and central districts of London, and have assisted the inspectors in the Scotch, North-Eastern, Manchester, Midland, Oxford, and South-West districts in holding examination enquiries, visiting some of the more important centres, or investigating the work of organised science schools. This variety of work presenting so many points of interest, and raising so many educational questions to which the answers have still to win general acceptance, renders the selection of topics for consideration in this report a most embarrassing one. I shall therefore confine myself to one or two subjects among the many which have been constantly under consideration during the recent developments of the Department's work.

One of the surest signs of healthy effort is to be found in the simultaneous existence and growth of different methods of teaching which have for their object the same educational result. In no branch of education is this more evident that in the numerous systems for manual instruction which are now in operation in various schools. So much of the value of any particular scheme depends upon the personal qualifications of the teacher that it is impossible to lay down any hard and fast rules lest they should unduly fetter the teaching of what is still a new subject in the school curriculum. There is sometimes a desire on the part of school authorities that the Department should publish an authoritative course which each school could implicitly follow and thus feel secure in the possession of the best that educational experts could supply. I have always felt that this would for many years to come be almost a confession of failure, and would certainly retard the development of manual instruction in its educational aspect. When we consider the comparative youth of this new claimant for admission into the crowded school curriculum, and compare it with subjects in which the teaching methods have been elaborated by the experience of generations, it would obviously be a fatal step to stereotype one particular system on so short an experience. There are, however, certain general principles applicable to the methods of manual instruction which may be usefully borne in mind in the framing of any particular course and to which I should like to draw attention. Having had many opportunities of seeing the work done in this subject for some years before it received any official recognition, and having examined a large number of schools in which the work has differed widely in character and material, I have become more and more convinced that for the inculcation of habits of neatness, order, accuracy, for the legitimate exercise of that constructive talent every healthy boy should possess, and most of all for the development of the reasoning power rather than of the mere knack of remembrance, manual

Appendix A.

MINUTES, CORRESPONDENCE, AND REPORTS.

instruction given under proper conditions is one of the best instruments in modern education. At the same time I should be disposed to trust for its adoption rather to the gradual growth of educated opinion in its favour than to any enactments rendering it compulsory.

That portion of manual instruction which has obtained the most widespread adoption in boys' schools is undoubtedly the working in wood. This is due to the evident suitability of the material, the readiness with which it can be worked, its cleanliness, and its comparative cheapness. The course of instruction, however, varies widely, almost every good teacher arranging for his own students a series of exercises which differs in some degree from that of any other. But these various systems can all be grouped under two main divisions which, although not in any way radically opposed to each other, yet are in some degree based on opposite methods. One of these systems has for its support a powerful association backed up by an increasing number of teachers who have been as pilgrims to the Mecca of Naas, and returned full of the educational enthusiasm that admirable institution never fails to evoke. The other system possesses neither of these claims. It has not even a name of its own by which it can be recognised from its competitor, which is known everywhere under the Anglicised name of Sloyd. Yet in spite of these drawbacks it will, I think, in time prove stronger than its imported rival, not merely because it is a home growth, nor on account of superior official favour, but solely on the ground of its superior adaptability as an educational instrument. The first essential in any form of manual instruction is accuracy; and here both systems appear to be on an equal footing, but the early introduction of curved surfaces into the Sloyd course renders this accuracy of dimension very difficult, and in practice a very moderate approximation is all that is usually obtained. As an example may be taken the hammer handle which forms an exercise in the usual Naas course. I have seen in many cases numbers of individual handles which for outline and finish were admirable, but when tested against each other were woefully at variance in dimensions although made at the same class under the same conditions. It is obvious that a child must be content in this exercise with a general approximation to the desired form rather than with the production of a finished article to given dimensions. A very powerful incentive to care and accuracy is given if a boy can test for himself in the simplest manner if his work is right or not, and this is always possible in the English system where flat surfaces bounded by straight lines are more usual. The question of the utility of the finished articles is, in my opinion, a subsidiary one. The Sloyd exercises are intended to emphasize the utilitarian aspect of the work, yet not one tenth of the articles made ever are utilized, nor could some of them ever be of any use in the average English artisan home. A third difference between the two systems is found in the tools employed. In the English courses the rule, saw, plane, chisel, and marking gauge are at first the only tools needed, and throughout all the woodworking exercises are always those to which greatest importance is attached. These, too, are the tools which would be found in active service in most of the constructive trades in which wood is employed, especially so in those where work to accurate dimensions has to be executed. Though Sloyd does not neglect the use of these tools, yet it puts into much greater prominence the Swedish knife, the spokeshave, and sand or glass paper, one of which is not used in English work at all, while another is resorted to only under exceptional conditions. To obtain great dexterity in the use of the Swedish knife is, no doubt, a good educational training of its kind, but it seems to me akin to a process of teaching a child to write with a brush and Indian ink during school life, when in after life he will be required to use the usual pen of civilisation. If the same educational effect can be obtained equally well in two ways, one of which has the advantage of being practically useful in after life, it would be waste of efforts not to give that one the preference. But there is yet a fourth difference between the two systems and one which has not yet received due consideration. I refer to the effect on health. Considering that manual instruction is as a rule given to a boy for only two hours weekly, this may appear at first sight a very minor question, yet in the face of the difficulties connected with the maintenance of proper health conditions in schools, it is surely undesirable to do anything which may without absolute necessity add to these difficulties.

There is a certain amount of danger attendant on the handling of tools under either system, but some 12 years' experience has shown me that this is generally of a very trifling character, while the knowledge gained in the workshop often guards the boy against more serious injuries in after life. But the extent to which sandpaper or glasspaper is used in Sloyd work seems to me a sufficiently serious matter to deserve consideration at the hands of educational experts. One school authority who has adopted Sloyd has given an abstract of the number of hours spent over each tool in the Sloyd course, and out of a total of 61½, no less than 7½ are devoted to the use of sand or glass paper, and 5½ to the file. Conceive the amount of wood dust mixed with the fine grit of sand or powdered glass when a dozen boys are simultaneously working their hardest with this material in a small room, such as I saw some time ago at a school in Bradford, the town where some of the most effective Sloyd teaching has been given by a very clever instructress who had been trained at Naas. Moreover, the position of the boy when working at some of the smaller exercises tends to facilitate the entrance of this fine mixed dust into the lungs, as any one can verify who will notice the attitudes of a class when doing the first four exercises in the Sloyd course. If a comparison is made between the appearance of two classes, one engaged at these early exercises of Sloyd and the other in the planing of a flat surface some foot in length—the usual commencement of the English system—I feel little doubt that the hygienic advantage would be seen to be on the side of the latter. Were the former of manifest educational superiority this advantage might be overlooked, but this certainly has not yet been proved to be the case.

I have dealt somewhat fully with the merits of these two systems because I have found that managers often adopt the one or the other without having the opportunity of seeing the points of difference between the two. Though it will be gathered that for several reasons I think the English system is a more useful and not less educational instrument than Sloyd, yet I should not be indisposed to see some modification of the latter course adopted in cases where the object in view is the production of a few elegant and daintily finished articles, without regard to time or educational effect.

Another matter of widely different character has been brought particularly under my notice by my recent inspections in the Eastern and home counties. I refer to the condition of the smaller Grammar Schools. As the Science and Art instruction at these schools is now generally conducted in connexion with this Department the capability of the school for giving this instruction effectively has naturally required consideration. Many of these schools have endowments so small in amount, and are situated in localities where the supply of students is so meagre, that their educational work is continually hampered. Secondary education can never be brought below a certain minimum of cost, and unless the average fee paid by students in these smaller grammar schools is supplemented by endowment or by grant from some external authority, no education worthy of the name, can be given. I have found in Norfolk and Suffolk some 10 schools none of them with more than 50 boys, all in a state of financial insecurity, able to make a decent struggle for existence so long as the headmaster can attract boarders, but doomed to decay if the supply falls off.

As the schools in the larger towns become more efficient and increase in number so does this stream of boarders gradually dry up, and I hear on all sides how much more difficult it is to obtain boarders now than it was 10 years ago. Fortunately the county councils have come to the aid of many of these schools, have equipped them in certain cases with chemical laboratories, have rendered their scholarships tenable at the aided school, and in certain cases made annual grants for the improvements of the teaching staff.

This last mode of giving aid is a most valuable one. The school secures the services of a man with some accredited science qualification, and the County Council obtains a resident in each district who can be utilized to some extent, in the promotion of their general educational work. This matter might cordially be recommended to the consideration of those councils which have not yet adopted it.

So much still remains to be done in the proper organisation of Science and Art work throughout the country that it is still too early to speak in general terms of the quality of the teaching. As, however, the instruction in the smaller towns and country districts must in the future, as in the past, be to a large extent dependent upon those who have been trained as elementary school teachers, it is most desirable that the Science work of the Training Colleges should be of such a character as to fit the students for this work; but I regret to say that the Science teaching in the majority of the colleges I have visited is certainly not of the type which is calculated to be of value to the future elementary school teacher. As it is probable that changes may be made which will partly remove this objection, it is unnecessary to pursue this subject at length. I will only say that the student should be taught how to experiment, and how to reason from experiment. Over and over again have I heard in the Science classes of the London Board Schools and elsewhere such remarks as "I will show you the experiments next time"—a phrase which betrays an utter inappreciation of the right methods of Science instruction, and which, moreover, is sometimes intended to conceal the small extent to which any experiments at all are shown to the luckless class. But all the responsibility for this lack of experimental work does not rest upon the teachers. Too frequently the governing body of the school or the headmaster forgets that experiments take time both for their preparation and for their removal, and consequently that a Science master ought not to be required to teach continuously throughout the school day, but should be given an adequate time for the due arrangement of those experiments which are necessary parts of the proper teaching of his subjects.

Mr. T. B. Shaw, Senior Inspector, reports on the North Western Division as follows—

As this is the first report, I propose to give a brief summary of the methods employed in the different counties and county boroughs, for distributing the funds at their disposal, and to report generally on the result and advances towards technical instruction that are being made.

LANCASTER COUNTY.—The county council "retains the control recognising "in practice the principle of dealing in the proportions of rateable value and "population."

The county is divided into 14 non-county boroughs, 98 local board districts, and 28 rural districts, and each of these receives a grant in proportion to its rateable value and population.

As a rule the local authority constitutes itself the technical committee for the district, and the clerk to the authority is secretary, and receives payment from the funds. In the rural districts special committees are formed. The distribution of money does not correspond with the amount of work that is being done in a district. In a great many of the local board districts and rural districts the committees have had very little experience in technical instruction and the money is expended more to suit the wishes of the inhabitants, than in a properly organized scheme of instruction. Further, the county and non-county boroughs having generally well organised schools instruct a large number of students from the surrounding local districts without receiving any payment from the county funds for them. In these rural districts and local board districts the money is principally expended in dressmaking and cookery classes, and in a variety of lectures principally attended by [illegible], and these can scarcely be regarded as tending towards real technical education.

There are only 10 classes in connexion with the Science and Art Department in the local board and rural districts in the part of Lancashire in [illegible].

In the non-county boroughs as a rule, considerable strides have been taken towards a good system of technical education. Nelson has levied a rate and just completed a fine Technical School and Art School; it was occupied this year, but is not yet fully equipped. The laboratory is not fitted and the course of instruction is not yet fully worked out. The purely technical work will include cotton weaving (several looms having been fitted up), plumbing and carpentry.

ACCRINGTON.—There is a new technical school in course of construction, and it is hoped it will be occupied for the ensuing session. The school here is progressing, and a wide range of subjects is covered and generally well taught.

SOUTHPORT.—The fine technical school is well attended, the instruction sound, and the school well equipped with apparatus and examples.

LANCASTER possesses a fine building, the Storey Institute, well equipped, but the classes are not so well attended as could be wished, and there seems to be a want of connexion between the elementary schools and the evening work of the local board districts.

WIDNES is now building a technical school in connexion with a new library, and this district, in the centre of the chemical industry, should be able to maintain an excellent technical school, the present chemistry classes being well attended.

In addition to the distribution of funds to these districts, the county council allocates 8,920*l* to exhibitions and scholarships, of the working of which I have not had any experience ; a certain sum is given towards agricultural work, which will be noticed under Preston. A special grant is made to the School of Mining at Wigan, and also towards a School of Horology at Prescot. This latter institution is at present rather contemplated than in actual existence. There is a large watch factory at Prescot, but the technical school is only represented by some classes in mathematics, and mechanics, and horology held in a temporary building and entirely lacking in apparatus and equipment.

It is in the County Boroughs, as is natural, that the best work in Science and Art and technical instruction is being done.

LIVERPOOL.—The funds at the disposal of the Technical Committee are distributed to classes in commercial subjects, Science and Art subjects, and technological subjects, generally a capitation grant for each student in attendance is given, and a sum of money for each subject in which a student is presented for examination, and is not shown to be entirely ignorant of it. The classes of schools aided are divided into continuation schools for ex-standard scholars ; evening continuation schools ; evening Science and Art classes ; evening technological classes ; secondary schools teaching approved commercial subjects. A sum is also allowed to guarantee covering of working expenses in two organized Science schools, one in connexion with the board schools, and one in connexion with the voluntary schools ; of these latter the school in connexion with Hope Street voluntary school has been given up owing to want of suitable equipment and accommodation, and the other, the Brae Street School, is working fairly well.

In addition to these grants a large sum is spent in exhibitions and scholarships, a grant is made to University College for evening lectures, and a sum is devoted to the Nautical College for the technical instruction of sailors. The general object of the scheme is to introduce a progressive system of education to carry youths on from the elementary schools to proper technical instruction, and to the University if they show ability.

Liverpool possesses no really suitable buildings in connection with either Science and Art classes or technical work. The various classes are scattered throughout the city and generally overcrowded. An immense amount of good work is being done, the instruction in Science and Art subjects being generally very good and well illustrated. But it could be much more effectively and economically carried on if suitable buildings were provided.

BURNLEY.—The technical funds are principally expended in connexion with the Mechanics' Institute, where most of the subjects recognised by the Science and Art Department are well and effectively taught ; technical subjects are also taught, cotton weaving, plumbing, and carpentry being taught in well-equipped premises. The premises are too small for the increasing number of students, nearly 2,700 attending the various classes. This school in connexion with the Mechanics' Institute is an excellent example of what good work can be done by a competent committee in touch with the requirements of the industrial population.

BLACKBURN.—The new technical school here has now been completed and makes a very fine and well-planned school both for Science and Art classes and technical work. The Science classes are not so well attended as might be expected, and the teaching staff at present is not so good as that in similar institutions. The cotton weaving shed is very complete. The whole of the funds are allocated to this school in addition to a local rate of 1*d*.

WIGAN.—The mining school here receives a special grant from the Lancashire County Council in addition to the funds from the county borough. The classes are large and well attended, the teaching generally sound and

Appendix A.
Minutes, Correspondence, and Reports.

practical; but regular courses of instruction for mining students need to be organized. Students at present selecting subjects for themselves.

Preston receives no money from the county borough for technical instruction purposes. The Harris Institute carries out a very large educational work, there being upwards of 3,800 individuals attending the classes in various subjects, the science subjects are generally well taught, and the accommodation is suitable in general, and the apparatus sufficient. A new technical school is being built, which will allow of the present building being devoted more exclusively to Science and Art subjects. The agricultural school is also worked by the institute. A class of 40 holding scholarships receive a scientific education in agriculture and science subjects bearing on it, with practical illustrations and experiments at the farm at Hutton. Dairy classes are also held at the farm. The large demands for education are exhausting the funds at the disposal of the institute, and much good work may be spoiled unless the local authorities are willing to contribute towards the technical classes.

Bootle.—A new technical school is to be built here and part of the funds are retained for this purpose. The present classes are increasing, they are well taught, and show every promise of success.

Barrow.—The classes here are successful and well taught, there seems to be a want of organization and some needless competition between the Science and Art School and Barrow Island.

Cumberland.—The technical committee give grants to Science and Art classes in connection with the Department, also to evening continuation schools. They also allocate a certain sum to scholarships. Authorities who levy a rate are given control of a certain sum, the only localities receiving these amounts are Carlisle and Millom, the grants to Art classes are a lump sum of 8*l.* and 5*s.* capitation grant, and to Science classes of 6*l.* and 2*s.* 6*d.* capitation grant, with the result that there are 23 classes out of a total of 48 Science and Art classes in the county which take only Art subjects, the liberal grants to evening continuation schools have given a great stimulus to the formation of these classes throughout the county. The county council employ two teachers for itinerant work and inspection, one in Art the other in agriculture and chemistry. The Science and Art classes are generally taught by the elementary school teachers in the various localities and there is a general lack of apparatus and practical teaching. There are very few advanced classes, and not much opportunity is afforded for any systematic course of science—a new laboratory has been fitted up at Tullie House, Carlisle, and there is here the nucleus for good central classes in Science subjects.

A good deal of attention is devoted to the teaching of agriculture; it is contemplated to form an experimental farm in conjunction with Northumberland and Westmorland; also to establish experimental plots throughout the county. Technical or scientific instruction in metallurgy and mining have not made much progress with the exception of a successful class in mining at Whitehaven.

Westmorland.—Grants are made to Science and Art classes, aid given to teachers for travelling fares. An amount is allocated for scholarships. Two permanent teachers are employed, who give courses at different centres. There are only 14 schools for classes in Science and Art, but they are generally efficient and well taught. At Kendal there is a very excellent central school, well equipped for the subjects taken up; considerable alterations have been carried out this year, and the laboratory has been much improved. A feature of the system is the excellent supply of text books and authorities on the various subjects taught; these are lent to the various teachers: all necessary apparatus can also be obtained at the central school, but this is a boon not sufficiently availed of. There is every opportunity afforded for teachers to improve themselves, which has generally been utilized. A lecturer is employed for instruction in domestic subjects, and also one in veterinary surgery: classes in agriculture held at various centres did not prove very effective, and the establishment of experimental plots and an experimental farm in connection with Cumberland is now contemplated.

General.

The systems of aid adopted by three counties in this district vary considerably, and the results have been pointed out. The greatest difficulty appears to be in dealing with rural districts, the allocation of small sums to districts, does not generally produce any useful result. Such localities are best served by some form of continuation school, with scholarships to the larger centres where further education can be obtained. Large and well equipped schools in suitable centres produce the best results. The influence of committees on the results of schools cannot be over estimated. A working committee, with the representatives of the industrial classes on it, who work hard to effect a good result almost invariably achieve it.

There is in many districts much apathy shown by manufacturers towards science and technical instruction. In some instances manufacturers are positively antagonistic, as they say they are afraid of trade secrets being revealed. The interest of manufacturers and their influence on their employees is of the first importance.

There is no doubt great progress evident yearly in science teaching and technical instruction. There seems to be an ever-increasing attendance at well-conducted classes, where confidence is felt in the teaching. The great fault in science teaching generally is the want of elasticity and adaptability by the teachers of the subjects to the technical subjects on which they bear. The general idea seems to be to enable the students to pass the examination of the Science and Art Department. The connexion between science teaching and technical work is not sufficiently insisted on, and the Department's syllabus is too closely adhered to.

The number of students who are either teachers or pupil teachers is very great, and their only object is generally to get a certificate, and this induces a system of cramming very detrimental to all concerned.

Dr. E. J. Ball, Inspector for the South Western Division, reports—

During the earlier part of the year 1894–1895, my time was largely devoted to familiarising myself with the schools and methods of teaching adopted in the various portions of my district, and in making the necessary preparation for the subsequent reorganisation of the work of the inspectorate.

Four Sub-inspectors of the second class joined in November 1894, and a conference was held at Bridgwater on the 8th and 9th of that month, at which all these sub-inspectors were present, together with the then newly-appointed Sub-inspector of the first class, who, however, left the district again immediately after the conference, and did not assume his duties until December 17th. At this conference I explained to the sub-inspectors the nature of their duties, and they accompanied me to several examinations and inspections. They then proceeded to their sub-districts.

The work throughout the year has proceeded without interruption, and from the commencement of December until the end of April, I received so much assistance from my staff that the total visits paid to Science and Art classes during this period numbered 224, while 626 examinations in Drawing were held at elementary schools, and in addition, 60 visits "without notice" were paid to elementary schools in which Drawing is taught. These latter totals do not include the examinations held in those portions of my district which are still under local inspectors.

With regard to the teaching of drawing in elementary day schools, it has to be remembered that the south-western district is a rural one, and that the small country schools are very numerous. Only about 1 per cent., or less, of the children examined are in Standard VI., and not more than about 5 or 6 per cent. in Standard V. Model Drawing is rarely well taught in small schools. Here, indeed, the teachers are frequently totally unqualified, and have only the most rudimentary knowledge of the subject they have to teach. Freehand Drawing is somewhat better taught than is Model Drawing, but even this is capable of very great improvement. Hitherto the "definitions" required have often been scarcely taught at all. The schools are frequently very badly supplied, and my attention has been several times drawn by my sub-inspectors to the very bad quality of the drawing paper used at many of the schools.

Drawing not being a "paying" subject, the teachers, as a whole, take but little interest in it. Another cause which severely affects the teaching of

Appendix A.

MINUTES. CORRESPONDENCE, AND REPORTS.

drawing is that the majority of the smaller schools, and many of the larger ones, are understaffed. Drawing is taught to girls in but few places, the teaching of cooking being compulsory when drawing is taken, preventing this. When taught drawing, girls appear to do the freehand work better than boys. With regard to the results of the examinations, the teachers say it would be of great value to them if they were informed when they receive the examination award, as to the subjects or standards in which their schools have shown weakness in the Drawing Examination.

With reference to the teaching of drawing in evening continuation classes, at present, relatively few of these apply for examination in drawing under the Science and Art Department. It is absolutely necessary in these schools to make the work attractive to the students, in order to insure their attendance at the classes. The kind of instruction in drawing which is suitable for elementary day schools, and for Science and Art classes, is not that which is adapted for evening continuation schools. Here the freehand drawing and shading of common objects, &c., should be not merely allowed but even encouraged, for a pupil will enjoy drawing a house and trees, dogs, horses, boats, &c., when he will turn away in disgust from outline drawing of ornament. It must be remembered that the attendance at these classes is purely voluntary, and that it is difficult to induce students to attend regularly.

Apart from visits paid during the course of the May examinations, 272 visits of inspection were made to Science and Art classes during the year 1894–1895. An attempt has been made to classify the various classes into types, such as "Excellent," "Good to Excellent," "Good," "Fair," &c., and this classification will be continued until completed. In addition, towards the end of the year, a certain amount of specialisation was introduced into the system of inspection, certain of my staff inspecting the classes in particular subjects in which they are especially qualified.

The majority of the science classes in this district are in Cornwall, those classes which are in Dorset and Somerset being mainly devoted to "Art," as a rule of a very elementary character, and such as is well within the knowledge of the present sub-inspectorate. Great depression has existed in Cornwall of late, owing to the decadence of the mining industry, and this has seriously affected many of the classes. At present science teaching in this district suffers from a lack of efficient teachers, and in addition to this the great majority of the pupils who attend these classes have not the preliminary knowledge necessary to enable them to properly commence the study of the various subjects they attempt.

The teachers avoid experiments whenever they can possibly do so, and a knowledge of the "Art of Teaching" is generally absent, very few of them being really good "teachers." The instruction in practical chemistry is fairly satisfactory, and nine newly erected chemical laboratories in my district have been reported on during the year. These are being erected by the aid of grants from the various county councils, largely with a view to the better teaching of Agriculture. Practical Physics, on the other hand, is much neglected. I have already, from time to time, reported as to the teaching in other subjects, and as to the progress being made by the technical committees of the county councils, and need but slightly refer to this now. Agriculture and kindred subjects are chiefly dealt with by these latter, and on the whole it may be considered that satisfactory progress is being made, though the money has at times not been spent to the best advantage by district committees. Where such technical classes are connected with the Science and Art Department, the system in general use is for the county council grant to be paid to the teacher direct, and for the latter to then get together a committee to meet, nominally, the requirements of the department. This, for instance, is the case in Somerset. Committees so arranged for, have no control over the funds, or, consequently, over the work of the school, especially when the teacher receives all the grant earned, a very common arrangement. This system has now been amended in Devon, and in Cornwall some similar change is also probable. The state of affairs in Dorset is at present extremely unsatisfactory, and the future of technical education in that county is most uncertain.

Appendix I.

I would beg respectfully to draw attention to the valuable assistance I have received in the work of the district from my sub-inspectors, and in particular from my sub-inspector of the first class, Mr. G. Fletcher, who has had wide experience in the teaching of classes in connection with the Department. In conjunction with another, he has published a paper on the "Structure of Glacier Ice" (Geological Magazine, April, 1895).

The sub-inspectors of the second class, Messrs. E. Catherall, H. Lucas, G. Shaw, and B. B. Skirrow, have shown the greatest possible interest in their work, and have been indefatigable in their duties. In addition to their ordinary work in connection with the examination of drawing in Elementary Schools, each has visited a number of Science and Art Classes, and their reports have always been careful and detailed, as well as intelligent.

I have also received much assistance and information with reference to Technical Instruction in his sub-district, from Mr. A. W. Geffcken, the local inspector for Dorset.

I devoted a portion of my summer vacation to a study of the system of Technical Education in use in Belgium, and I have to express my sincere thanks for the information and assistance most kindly afforded me by the Director of the École Industrielle de Bruxelles, M. J. Defontaine, and the Director of the École Industrielle de Liége, M. P. Dehousse, whose schools I visited. M. Defontaine also conducted me over the excellent exhibit of the Technical Schools at the late Antwerp Exhibition, and the École Ménagère. I subsequently visited a number of the chief metallurgical works in Belgium, and in the district of Siegen, Germany, inspecting also the small mining school there.

In Belgium the chief educational authority is the State, and the system of education is consequently State controlled. As in the United Kingdom, however, State aid works hand-in-hand with local support in the matter of technical education. For this there is a National Fund which is employed in part in the support of schools wholly under State control, and in part in aiding communal and other schools. When such a school desires a State grant, it has to show that its curriculum is in accordance with the State requirements. Then, if on a report of one of the State inspectors, a grant in aid is made, the school becomes subject to State supervision, an inspector visiting it at intervals. He can at any time recommend the withdrawal of the grant entirely, the State never giving the money absolutely, but only conditionally, retaining its supreme control. This it exercises in a benevolent manner.

In general, the system of elementary education comprises infant schools, elementary schools, and others closely resembling evening continuation classes, having the same object in view of renewing and completing the education of past pupils of elementary schools. Following on this, there is a varied system of technical education. Thus for girls there are :—

194 *Écoles ménagères*—schools in which only household management is taught. See p. 9. Appendix VI.
5 *Écoles ménagères et professionnelles*—schools similar to the above, but in which some cottage industry is also taught.
4 *Cours professionnelles*—classes giving instruction in certain trades.
12 *Écoles professionnelles*—schools giving a complete education in some particular trade.

For boys the system of technical education is very similar. These are taught at :—

43 *Ateliers d'Apprentissages.*
2 *Cours professionnelles.*
13 *Écoles professionnelles.*
37 *Écoles industrielles.*
7 *Cours publics*, with instruction in physics, chemistry, hygiene, political economy, palæontology, botany, and zoology.
5 *Cours publics*, giving instruction in drawing, machine construction, modern languages, and commercial subjects.
1 *School of Mines*—Hainault.
1 *Commercial School*, Antwerp.

Altogether in the year referred to (? 1893) 29,426 students received instruction at 324 schools, and at a total cost of about 57,000*l.*, of which approximately 37½ per cent. was provided by the State, 11½ per cent. by provincial authorities, and 21½ per cent. by the communal authorities, the balance being derived from various sources.

I append various publications I obtained when visiting the various schools. The Ecole Nationale d'Horlogerie is supported by the State. It does not pay

Appendix II. (also IIa and IIb.)
Appendix III. (also IIIa.)
Appendix IV.
Appendix V.
Appendix VI.

its way, as there is no market for the pupils' work. The École Professionnelle de Tailleurs, of Brussels, on the other hand, leaves a surplus. This school is well supported by the trade, who send materials to be made up there, and pay for the work done. After the first six months the students receive pay, as apprentices, for their work. The École Industrielle de Bruxelles is in the same building as the schools just mentioned.

Other publications refer to the technical schools at Liége (the École Industrielle and School of Mines), and to the schools for their workpeople, supported by the Marcineile and Couillet steel works.

In conclusion, I would beg to state that I have received much kindly help and advice during the course of the year from Mr. E. H. Brodie, chief inspector under the Education Department, whose district is largely coterminous with my own.

Dr. H. H. Hoffert, Inspector for the North Eastern Division, reports—

During the period, April 30th, 1894, to April 30th, 1895, I have been able to pay about 200 visits to Science and Art schools and classes (excluding visits to May examinations) and 85 visits to elementary schools for drawing examinations and manual work.

There being as yet only one sub-inspector appointed in this district, and the number of new classes and organised Science schools needing attention being very large, it has not been possible to give much attention to the working of evening continuation schools, except in so far as these schools have come under casual notice in the course of the ordinary visits to Science or Art classes. Nor has it been possible to devote much attention to technical subjects outside the range of the Science and Art subjects included in the Directory. This latter, however, is not a matter for great regret as extensive provision is made in the county of Durham for the inspection of classes in technical subjects by a staff of county inspectors, who are more or less specialists in the subjects they inspect. The reports of these inspectors have been placed by the Durham County Council at my service in return for the assistance given by the Department to the county council in communicating detailed reports of the inspections of classes in certain specified Science subjects.

The grants of the Durham County Council are based on the reports of these inspectors as to the efficiency of the teaching and equipment of the classes, there being a graded system of attendance grants, by which 3*d*. to 2*s*. is paid per student's average attendance on the first 10 students, 1*d*. to 6*d*. on the next 20, and 1*d*. for the remainder. Additional grants are also given to some classes for materials. As the grants to these schools also include the grants derived from the Department of Science and Art, the whole grant received by the local committee practically depends on the award of the county council's inspector. This system has the curious result that those classes which do very well in the May examinations may in some cases receive either a very small or no contribution from the county council.

In inspecting evening classes for adult students it has not been found advisable, except in a few cases, to question the students, and the adequacy of the teaching has to be judged entirely from observing the teacher's conduct of the class during the visit. I have found, as a rule, strong objections to any system of personal examination of such students, and in one class I visited where the secretary had specially requested a good attendance "because the inspector was coming," only two students attended out of a class of 10 or 12. In the instructions issued to the county council inspectors they are specially requested to refrain from questioning these classes. It would therefore appear that in evening classes for adult students a change from examination to inspection, such as has been introduced for young scholars in organised Science schools, is not very desirable or practicable.

A large number of meetings with local committees has been arranged for the purpose of discussing the organisation of the classes under their control and the mode of payment of the teachers. As a rule these meetings have been of a very cordial kind, the committees expressing themselves greatly pleased to receive suggestions and advice as to the conduct of the classes. In nearly all cases the committees have recognised the advisability of paying the teachers fixed salaries, instead of allowing their incomes to depend mainly or entirely on grants, and arrangements have usually been come to by which this change will be brought about next session, if not already made. It is felt that it is desirable to let the teacher have some interest in the success of his class, as in some cases where the teacher's salary was entirely independent of the success of the class a want of due perseverance in the teaching has been met with. It is therefore proposed, usually, to make the bulk of the teacher's salary fixed at the beginning of the session, and to give him in addition a small fixed per-centage of the earnings of his class. This course, is, I think, a very good one to take. It is probable that before long nearly all the teachers in this district will be paid upon some such plan, and that it will in consequence be possible to obtain a more equitable adjustment of the remuneration of teachers of large and small classes under the same committee.

The distribution of the funds for technical instruction by the county councils of Northumberland and Durham is in nearly all cases made through a special local representative technical committee, which is the only committee for the town or country district recognised by the county council. This action has led in many cases to a very desirable centralisation of the Science and Art work in these towns and districts, the old committees having given way to, or become absorbed in, the new one. There is still, however, in many places, a needless multiplication of committees, which are often more or less in competition with each other. It sometimes happens, too, that a class may be under one committee for the Science and Art Department's grants, and under a quite different committee for county council grants. It is especially an evil when a committee is formed to run a subject which happens to be in considerable demand in the locality. The teacher then receives practically the whole of the grants earned by this class, and is usually much overpaid, whilst other classes in the same locality which are less well attended are often starved for want of funds. The time appears to have arrived when more stringent rules as to the recognition of new committees, especially in places in which a local committee already exists, are very desirable.

The arrangements made by the county councils for the training of teachers and the equipment of local classes with adequate appliances for teaching are bringing about a continued improvement in the character of the teaching of these classes, especially in rural centres. There is still, however, much room for improvement, most of all in the experimental illustration of the science subjects taught. In some cases special teachers have been engaged and paid by the county councils, the local committees merely providing for local expenses. I believe that this has not been found in all cases a success. The admirable facilities offered by the staff and laboratories of the Durham College of Science, in Newcastle-on-Tyne, have been largely made use of by the Northumberland and Durham county councils for giving advanced and laboratory instruction in science and technical subjects, to teachers selected to attend special classes on Saturdays and during the summer months. The tuition fees and travelling expenses of the teachers are paid by the county councils. In a similar way the North Riding of Yorkshire County Council has established several centres to which selected teachers from elementary schools are sent to obtain instruction in drawing and gain the necessary qualification for teaching drawing adequately in their day schools.

The abolition of the grants for 2nd class passes in the elementary stage of science subjects is now generally admitted to have had a very beneficial effect in raising the general tone of the instruction in Science classes, though regret is still frequently expressed that no certificates are given to those who reach the standard "fair." This is more especially felt in outlying mining and agricultural districts where the general standard of education of the students is not high, and owing to the difficulty of reaching the standard of the Elementary stage "pass," they become readily discouraged. In such classes the time of the teacher is largely spent in explaining very simple matters in elementary mathematics and science, to the detriment of his proper subject. The provision of a simple course of general elementary science, introductory to the subjects of the Science and Art directory would appear to be of very great utility to such students, such course perhaps might be obligatory before the full certificate in the science or technical subject would be granted. The evening continuation schools, at all events as yet, do not seem to supply this need.

As a rule it is found very difficult, both in small and large centres of instruction, to induce the students to occupy themselves with any subjects other than those having an immediate bearing on their daily occupations, or to take a wide view of their studies. Thus students in steel works will attend classes in machine drawing, steam, and applied mechanics, but will rarely attend classes in geometrical drawing, heat, or theoretical mechanics, without a due knowledge of which their study of the former subjects must be largely mechanical. Possibly this tendency to narrowness of study could be overcome to some extent by a judicious grouping of the subjects in the Science Directory, special certificates and awards being given for success in passing all the subjects comprised in any one group. Some such scheme seems well worthy of consideration and discussion.

The new rules for organised Science schools have been generally very favourably received, the managers of such schools expressing themselves greatly pleased at the recognition given to literary instruction and the steps taken to ensure its adequate teaching. In those cases where provision does not already exist for the teaching of practical physics active steps are being taken to provide the necessary laboratories and lecture rooms, either by the modification of existing rooms or by addition of new buildings. In only one or two cases will the new requirements probably necessitate the abandonment of the organised Science school scheme, and the lapse back of the schools to a mere collection of Science and Art classes. The place of these schools will probably be taken by some of the grammar schools which are, as a condition of the grants from the county councils, urged to organize under the Department of Science and Art. Organised Science schools of the higher-grade Board School type have hitherto been somewhat coldly regarded by the county councils, who have not extensively aided them. The re-organization of these schools under the new rules will probably cause them to be more favourably considered and more extensively aided. It is very desirable that all educational authorities in the district should work together to make the organised Science schools of the greatest use to the greatest number of scholars, and especially to ensure that those attending them shall stay long enough to receive full benefit from the courses of study they provide. Hitherto the great bulk of the scholars in many of these schools have remained in them only one year, whereas at least a three years' course should be taken, so that full benefit may be derived from the training in them. For this reason it seems desirable, at present at all events, to pass the scholars direct from the VI. Standard into the organized Science school, and it is probable that in those schools in which a VII. Standard or its equivalent now exists it will be converted into the first year of the elementary course in the new scheme, two years being given as a rule to this course. Scholarships from elementary schools to organised Science schools are of great value in securing a lengthened period of attendance at school. The Middlesbrough High School, which is largely fed by scholarship boys from the North Riding of Yorkshire, and also to some extent from Durham, has a very fair proportion of boys taking a third year's course under the present rules, and similarly the Rutherford College in Newcastle-on-Tyne receives a number of scholars from elementary schools in Northumberland and Durham. Something might possibly also be done by scholarships given to some of the brighter boys in the elementary course in the organised Science school, to enable them to continue their studies for two or three years and go through a satisfactory advanced course. These would form a nucleus round which other scholars would no doubt soon gather, and so in time the advanced instruction in these schools might become equally as efficient and satisfactory as the elementary. The gap which at present exists between the organised Science school and the evening technical college or school might then be more or less bridged over, and the great waste of educational effort which results from the break of three or four years in the student's educational career would be largely stopped.

Instruction in manual work continues to make advance, fresh centres being opened from time to time. The Durham County Council, acting in connexion with the Durham College of Science, has engaged a manual instructor to give courses of instruction to teachers of elementary schools in the county at various centres. In Hull the School Board has erected three large workshops each containing over 60 benches to which the scholars from the elementary schools are drafted, so that very soon manual instruction will be given to the scholars in nearly every school under the board. At present the instruction is confined to woodwork, but large shops have also been built for metal work, though not yet fitted. An interesting attempt is being made at Rothbury in Northumberland to encourage village home industries by the establishment of flourishing classes in woodcarving. Some excellent examples of the work done in the wood-carving class have recently been sent to the Home Arts and Industries Exhibition at the Albert Hall.

The Hull Corporation has applied the funds placed at its disposal by the Customs and Excise Act to found a Municipal Technical School. Temporary premises have been acquired and fitted up with a good supply of apparatus and machinery for physics and engineering. An efficient staff has been engaged, and the chemical school attached to the Hull Royal Institution and the Hull School of Art have been affiliated to the new venture. As yet the number of students attending is not large, but the school promises to develope into a useful institution.

Mr. T. Preston, Inspector, reports on the Science and Art Schools and Classes in Ireland, as follows—

I regret to have to report that throughout my inspections in Ireland I have found very grave deficiencies in the science teaching. In the majority of schools there is no evidence whatever that the teaching is illustrated by lecture experiments or practical demonstrations of any kind, such as the Department requires, and is deemed most desirable by all experts in Physical and Natural Science.

This serious defect arises partly from the possibility of obtaining results fees by written examination alone, and partly from the inability of many of the teachers to perform experiments of any kind illustrating the subjects which they profess to teach. A large number of these teachers have never had any training in practical (laboratory) work, and many of them have probably never seen an experiment performed.

Besides this there is very little (if any) local effort or interest in the classes, so that they partake to some extent of the nature of "private venture" classes, owing their existence almost entirely to the energy and perseverance of the teacher. There is, however, a hope that, under the system of Inspection recently instituted by the Department, good teaching may be so fostered and encouraged that the present state of things may be replaced by a healthier system in the near future. To effect this rapidly, however, it will be necessary to provide a wider scheme for the training of teachers, or to supplement their present facilities.

In the Art Schools and Classes the standard of teaching is much superior, but I think it would be a great advantage to the teachers, (and a boon for which they would be grateful) if some expert in Art from South Kensington could visit this country periodically and by advice and criticism (while making a tour of the schools) bring the teachers more into touch with the state of things in the English schools.

Although the public mind seems to have been somewhat awakened to the importance of practical instruction and training, yet (owing to the poverty of this country or otherwise) very little has been done so far in the way of developing "Technical Education." During the year the "Technical Instruction Act" has not been put into force in any place other than those (Dublin, Belfast, Cork, Galway, Londonderry) in which it was previously in operation.

Dr. S. F. Dufton, Inspector for the South Eastern Division, reports—

The year has been one of very satisfactory progress; confidence in the work appears to be growing steadily, and permanent educational schemes are therefore everywhere replacing tentative efforts.

Some half-dozen institutes have been opened during the year, and about twice as many more are in various stages of erection. Chief of those opened is the South-Eastern Agricultural College at Wye, perfectly equipped with

Appendix A.

[illegible]

scientific laboratories and experimental farm for giving a sound training in the principles and methods of agriculture. The College, which is already an assured success, serves as the headquarters of the travelling agricultural agencies at work in Kent and Surrey—dairy school, farriery and bee vans, &c.—and is also to be employed in vacation for teachers' summer courses.

A similar but smaller college has been opened at Uckfield for Sussex.

Technical Institutes have been completed at Maidstone, Portsmouth, Chatham, and Guildford. A Girls' Technical School has been established at Worthing, new premises have been built for two organised schools, Farnham Grammar School and Brighton Higher Grade School, the latter having a very fine Art room and chemical and physical laboratories. Laboratories have been fitted in Secondary Schools at Alton, Basingstoke, Canterbury, Maidstone, Odiham, and Rochester.

The development of the old endowed schools under the fostering care of the county councils is one of the most pleasing features of the year's work. Both Hampshire and Kent have this year adopted schemes for aiding secondary schools, which, though not by any means as comprehensive and thorough as that of Surrey, are already producing a good effect.

In the Evening Science and Art Classes the grants at the command of the committees from the customs and excise funds have led to greatly improved equipment and a better method of payment for the teachers. Practically all the evening classes are now aided and controlled by county and urban authorities. In the technical classes there is a very healthy tendency to suppress purely recreative work, though there is still room for improvement in some places in this respect.

There is an almost complete lack in the district of classes in technical or applied Art. The Art Schools and Classes seem mostly content with routine work—teaching drawing and painting without any vigorous attempt to show the application of Art to industries.

In connexion with the administration of technical instruction in this district, central management is gaining ground from the system of delegating powers and funds to a series of small committees. In Sussex the county is now managed by the county council direct. The management of the boroughs administering their own funds contrasts on the whole unfavourably with that of the counties; many towns would undoubtedly greatly benefit from a frequent interchange of views with the county authorities as to educational policy. The towns and counties are so mutually dependent that much harm is done by their being educationally severed; in a few extreme cases quite opposite policies are pursued by towns and the counties surrounding them.

In conclusion it is gratifying to record that all over the district there is a desire on the part of the local authorities to co-operate heartily with the Department.

Dr. D. S. Macnair, Inspector for the South Scotland Division, reports—

Science and Art Classes.—During the period from 5th March 1894 to 30th April 1895 I have made 189 visits to Science and Art classes, including all the centres in my district, with the exception of about 30. Most of the centres not yet visited are in isolated places, where only a single class, generally in mining or agriculture, is held.

The classes may be divided into day and evening classes. The great majority of the former are held in the public elementary schools, the favourite subjects being Physiography, Mathematics, Electricity, Theoretical Chemistry, Geometrical Drawing, and Human Physiology. Of these, Physiography is by far the most common, probably because it is taught in the Training Colleges, and therefore most elementary teachers are "qualified" to give the instruction. The teaching in these day classes is, on the whole, of a low type. There is far too much book work, and far too little appeal to the observation and reasoning powers of the pupils. Some of the causes of this unsatisfactory state of matters are easily named: want of facilities for experimental work, such as convenient lecture tables, gas and water supply, &c.; want of leisure for preparation of experiments on the part of the teachers, and, most important of all, the neglect of practical experimental work at the Training Colleges and Universities where the teachers are prepared " for the work.

In most cases, the management of these classes is in the hands of the local school board; but sometimes only one or two members of the board are on the committee, and in many instances a large number of outsiders is added, often sufficient to outvote the members of the board. (In at least two cases that I have met with the compulsory officer is a member of the Science and Art Committee!) I am of opinion that this should not be allowed in the case of day classes conducted by elementary teachers in board schools. Such committees can have no real control over the teachers who are nominally employed by them, but are in reality the servants of the school board, and already paid by it for the whole of their time. The chief reason for the practice is the regulation that only members of committees can act as superintendents of the May Examinations. Where the school board consists of only five or six members (the usual number in country districts), and there are several examinations, the work of superintendence is more than the members can reasonably be expected to undertake.

The evening classes may be roughly divided into two sections:—those connected directly with local industries, and those which are not so connected. The former includes such subjects as Mechanical Drawing, Building Construction, Naval Architecture, Applied Mechanics, Steam, Mining, &c. These classes are usually taught by men engaged in the respective industries, and on the whole, they may be said to be satisfactorily conducted, and to be doing good work. The subject of Agriculture is exceptional in that it is usually taught by men without practical knowledge and in the consequent unsatisfactory nature of the instruction.

The second section consists of miscellaneous classes, usually conducted by elementary teachers, the subjects of instruction being selected, as a rule, with more regard to probable profits for the teacher than to the needs of the district. The teaching in these classes has, as a rule (there are some notable exceptions), the same defects already referred to in connexion with the classes in day schools; and since in this case attendance on the part of the pupils is voluntary, many of these classes are in a languishing condition, and many are only kept going by the presence of pupil-teachers or day scholars, whose attendance is practically compulsory. I am decidedly of opinion that the county councils should draw a distinction between such classes and those in the more technical subjects already referred to. In the latter case judicious help may be of the greatest value to the students, and through them to local industries; in the former the effect is too often merely to encourage school boards to pay their teachers inadequate salaries. This is especially true of day classes in elementary schools. The best way in which aid can be given to such classes, by county or town councils, is by grants for the purchase of apparatus, and even these should only be given under careful supervision.

Many of the evening Science classes are also carried on as evening continuation classes, a grant being paid by the Scotch Education Department on the attendance of the pupils. This seems to me to defeat the object of the scheme of Science classes in evening continuation schools. These classes ought to be *preparatory* to the higher instruction given in classes under this Department, whereas at present an attempt is made to carry out two different schemes of work in the same class.

The Residue Grant.—Of the 16 counties in the district 11 have devoted the whole of the residue grant to technical education; three (Lanark, Dumbarton, and Roxburgh) have given a part only; and only two (Stirling and Kinross) have devoted the whole of the grant to the relief of rates. Unfortunately the amount of the grant is so small in most cases as practically to forbid the employment of a paid organising secretary. Only three counties (Ayr, Lanark and Perth) have over 2,000*l.*; two others (Dumfries and Stirling) have between 1,000*l.* and 2,000*l.*; all the rest have less than 1,000*l.* per annum.

So far only the Lanark and Ayr County Councils have appointed paid organising secretaries. In both these counties a careful scheme has been drawn up and many classes have been established directly by the county council. I am glad to say that these classes are generally among the most satisfactory that I have to deal with. I hope that in time at least the other three counties having grants over 1,000*l.* may be induced to follow the good example of these two; and on being consulted by the County Council I have suggested the appointment in each county of a teacher of approved qualifications, who could combine the duties of organising secretary and peripatetic teacher of some locally important subjects.

The great majority of the burghs have so far devoted their shares of the residue grant entirely to relief of rates. It should be remembered that in many cases the amount of the grant is so trifling that very little could be done with it, *e.g.*, to quote an extreme instance, the burgh of New Galloway has a grant of 2*l.* 19*s.* 10*d.* An effort is being made by the Lanark and Ayr County Councils to induce the burghs to entrust their grants to the county committee, subject of course to a guarantee that the wants of the burghs shall not be overlooked. This seems the most hopeful solution of the difficulty and it has already been carried out in one or two cases with success.

Only one School Board (that of Coatbridge in Lanarkshire), has adopted the Technical Education Act and built a technical school. Unfortunately the board has in this case received no help from the burgh. I understand that there is a prospect of technical schools being also established by the Hamilton and Motherwell School Boards.

Several county councils are carrying on or assisting technical classes in butter making, cheese making, laundry work, plumber work, &c. Hitherto I have not been able to find time to visit any of these classes.

Organised Science Schools.—There are at present five of these schools in the district, situated at Glasgow, Paisley, Kilmarnock, and Perth (two schools). Two (Allan Glen's Institution, Glasgow, and Sharp's Institution, Perth,) are primarily Science schools with a preparatory department, while the other three may be said to be primarily classical schools with a Science Department. One of the latter (Paisley Grammar School) has so few pupils taking the full Science course that it ought not to be included in the list of organised Science schools, which is thus reduced to four. All these schools are well equipped and the teaching in them, as might be expected, is above the average of that in day Science classes. Allan Glen's Institution, which is by far the largest, is among the very best schools of its kind, and the others, though less completely satisfactory, are also doing good work.

Although I have had some enquiries as to the new scheme for organised Science schools there seems to be little prospect of any great increase in the number of such schools in this district so long as Science has no place in the scheme of leaving certificates of the Scotch Education Department.

Drawing in Elementary Schools.—During the year I conducted 80 examinations in drawing in elementary schools. In the great majority of cases the award given was "good," very few being classed as "excellent" or "fair." As a rule model drawing seems to be the subject which is least satisfactorily taught. I still think that greater variety and more frequent changes in the work set at the examinations would tend to make the teaching of drawing less mechanical and more satisfactory.

Mr. R. Blair, Inspector for the North Scotland Division, reports—

I am glad to say that I have now seen practically all my district. It is yet too early to do more than hope that the quality of Science and Art teaching will greatly improve under the new system of inspection, but I am sure that already much has been done in developing more interest in the work and in bringing about greater attention to the Departmental regulations on the part both of committees and teachers. I am also certain that living in the district and becoming acquainted with local peculiarities and needs, I shall be able to give committees much assistance in starting new work, and in dove-tailing, or amalgamating rival classes. This latter is a kind of work which will grow, for, unfortunately, there are not a few localities where a reorganisation of committees is necessary so as to create the *educational authority* for the district or school. Committees are found superintending Science and Art classes in buildings of which they do not own a stone, and pretending to superintend teachers over whom they have no control, when there appears to be no sound reason why the real controlling authority should not make itself responsible for the supervision which it must in reality exercise. Again, there are important centres where funds are being wasted and energy dissipated in rival institutions. Science teaching power is duplicated, school apparatus and examples are bought two or three times over and teachers, within easy distance of each other, are attempting to teach all stages of the same subject, and consequently neither is able to devote sufficient attention to one stage.

In such instances I hope to see amalgamation or even agreement about classes to be held, teachers dividing their labour and better work resulting at less cost. Evening Continuation Schools and Science and Art Schools too frequently overlap. A few of the *larger institutions*—none of the largest—run their classes under both regulations. In this I think each class of school loses its true function. I should like to see every school confine its attention to one or other of the two sets of regulations: the Evening Continuation Schools would thus become the feeders of the Science and Art institutions. In localities where there is only one educational authority the task of grading the schools should not be a difficult one. Again, my past year's experience has led me to believe that the time has come when an inspector should be authorised to ask for a balance-sheet and for leave to inspect the vouchers in institutions where a balance-sheet is not properly audited and printed. When the latter is done it would be sufficient to send a copy yearly to the Department or to the District Inspector.

I am also glad to report that chemical (and in some cases physical) laboratories, Science lecture rooms, and Art rooms have been built and are being equipped in connexion with the large and handsome new schools at Inverness (Academy), Arbroath (High School), Kirkcaldy (High School), and Bruntsfield (Public School) Edinburgh. In addition to these, laboratories have been enlarged or improved at Thurso (Miller Institution), Fochabers (Milne's Institution), Aberdeen (Grammar School), Alva (the Academy), and workshops are about to be erected at Elgin, Dundee, and elsewhere. This shows considerable activity, but as yet Science and Art subjects are not likely to make much more headway in Scotland. Here not only Secondary Schools but in general the State-aided Schools, attempt higher work of some form or other. The success of this higher work is *measured* by the results of the University Bursary Competitions, or of the Leaving Certificate Examinations of the Scotch Education Department. These examinations therefore shape the curricula of all Secondary Schools or Secondary Departments, and the County Secondary Committees which, to a greater or less extent, *pay* for this work, guide the schools in the same direction. These examinations do not recognise Natural Science and so, in general, headmasters are unable, however willing, to withdraw any time or attention from subjects such as Classics, Mathematics, English and Modern Languages, by which their schools must stand or fall, to devote their attention to purely *voluntary* Science subjects. For the same reasons I do not expect any great increase in the number of Organised Science Schools. Even for those that remain the 'rules' must not be so strictly read as for those in England, *i.e.*, so long as Scotch schools can produce work of as high quality as English Organised Science Schools they should be allowed a little more freedom in respect of classification, organisation and time-tables since they are so much tied down by conditions which do not apply in England, and which have taken such deep root in Scotland. Our Secondary Education is chiefly literary, and it will not be complete or rounded off until Science subjects become an integral part of the curriculum of every Secondary School or Department, but this will take some time and much careful adjustment. Meanwhile the Universities stand in the way. Science subjects should have a share, even if optional, in the Bursary Competitions.

Still a great deal of good work has been done. Generally in the large institutions—day and evening—the teaching is of a very high standard. Greater attention should, however, be paid to Organic Chemistry and to preparations both Organic and Inorganic. It is a pity that the large and well-equipped engineering and chemical laboratories at Dundee University College, which are available for evening work, are not fully taken advantage of. I am able, however, to report much hope for improvement in this respect. Some of the so-called Schools of Art are little better than Art Classes, and in future it would be well, where a successful School of Art already exists in a town, to be very cautious about extending recognition to others. Of small classes I have little hesitation in saying that Mining classes are among the best taught and most successful, while those in Agriculture and Physiography are at the opposite extreme. The fault in both lies in too close an adherence to text-books, and pupils rarely learn any other reason for pinning their faith to statements than that these are to be found in the books they use. In Physiography I have constantly seen questions, following on the lesson, set to assistant teachers and pupil-teachers which involved no greater effort than the copying out of a portion of a text-book. Of Art subjects,

APPENDIX A.
—
MINUTES,
CORRESPONDENCE,
AND REPORTS.

Freehand and Model are not well-taught in the smaller Art classes. Too often in Freehand it is considered sufficient to distribute cards and to tell the pupils to "go on." After a time the teacher "goes round" and soon the lesson is over. Insufficient attention is paid to analysis of the design and the method of construction. In Model the most elementary principles are often violated. It is hardly conceivable that a teacher would ask pupils to draw a group of models without taking some pains to ensure their seeing it, and yet I have seen a class of 20 at Model drawing when not more than 10 could see the models without the greatest difficulty, and a few absolutely could not see them! These were drawing from the teacher's blackboard sketch. And there was plenty of accommodation in the next room! In this respect I may say that the Training Colleges do not assist us or the teachers much. Unfortunately these Colleges appear to be overburdened with a multiplicity of subjects and aims. Partly for this reason and partly for other reasons the teaching of drawing in Training Colleges does not reach a high standard, and in at least one of the Colleges in my district it is exceedingly poor. Science teaching, too, in these institutions, will not be on a satisfactory basis until it is made much more practical.

Science teachers in the larger institutions come mainly from similar institutions or from the Universities. For making Science and Art teaching more practical in the smaller classes or schools we must for the present look to the "Shorter Summer Courses" at South Kensington and to those Courses for teachers conducted at the Universities and Technical Colleges and at County Council centres. I have always heard the Summer Courses at the Royal College of Science referred to with nothing but praise, and I think the Department should, seeing how many applicants there have been this year, consider the extension of these classes on a large scale, if not at South Kensington, then at carefully selected provincial centres. This, I think, is part of the Department's best work, and if teachers are willing to sacrifice their holidays for this purpose the necessary expenses should be found for them out of the public purse.

It is to be regretted that so many teachers have to teach all day and all the evening too. The only remedy for this appears to be better staffing and better pay so that teachers will not have to encroach on their leisure hours and time for *thinking* and *preparation* with work to enable them to live and keep up a respectable appearance. Day classes of 50 are too large for one teacher. Every lecture should be followed up with exercises on the subject of it, and these should be revised or corrected *by the teacher*. This is impossible where he is engaged during the whole of the day school hours and during several evenings in the week, and not very possible where a Science Master in a Day School has 30 hours of actual teaching. Twenty-five hours of actual teaching per week is a maximum for any Science teacher.

There is considerable dissatisfaction among teachers and School Boards at the small number of schools which receive the "Excellent" award for Drawing. Although the subject is not compulsory in Scotland yet all the most important town schools teach it, at least to the boys. The schools are therefore, to a certain extent, "picked." Yet in England where Drawing for boys is compulsory and the schools, therefore, of all kinds, the number of "excellents" is greater. The quality of the work in my district is generally high, but it does not often reach the highest standard. While I have seen individual classes and here and there a school whose work is of exceptional merit, due mainly to teachers who have some enthusiasm for the subject, yet the average is considerably below that of such a centre as Birmingham. This is not by any means due to a difference in the ability or intelligence of the teachers, but amongst other things to (1) a difference of what is uppermost in their minds, and (2) a difference of methods. Most of our schools must keep up a show of secondary work, so the headmasters, at least, have little time to spare for the supervision of drawing. Again, not being compulsory, many of the class teachers do not regard Drawing so seriously as they would if it were part of the work on which the reputation of their classes depended. In Birmingham, on the other hand, the subject is taught systematically. The Board have appointed instructors and inspectors who teach their system to the assistants and pupil-teachers, and these carry it out in the schools. The treatment of the subject by the Board no doubt reacts on the minds of the teachers and they give the subject prominence. A comparison, however, of single subjects is no criterion of general merit, and cannot be a reflection on one set of teachers or another. Still, teachers in Scotland should devote more attention to "Exercise with ruler" of Standard III., "Scale Drawing" of Standard IV., and Geometrical Drawing of Standards V. and VI., both in respect to accuracy and neatness of execution.

The residue grant is divided among counties, royal burghs, and police burghs. The sums accruing to the minor burghs have been so small, that in many cases no serious, if any, consideration has been given to the spending of them. All the counties in my district deal with technical education in one way or another. Midlothian, Fife, and Aberdeen, have organising secretaries, and in each case the grant is administered on a broad and comprehensive scheme. Linlithgow, Inverness, and Orkney and Shetland alone do not spend the *whole* grant on technical education. Some of the county councils have re-distributed their shares among school boards according to rateable value. This method of administration has not been very successful. The grant thus becomes divided up into pitiful pittances and often flows away into channels, which, though possibly good enough in themselves, do not contribute to Technical Education as defined by Act of Parliament. The whole subject requires re-consideration. Of the large burghs Edinburgh, Dundee, Aberdeen, and Leith, the last two have in the past stood alone in allocating part only of the grant to Technical Education. In Leith there should be no hesitation as to what to do with it. There are no rival institutions; the education is entirely under the control of one authority—the School Board. The Dundee Town Council in addition to granting sums to the different teaching bodies have undertaken, on their own account, manual instruction classes for mill-lads. The success of these classes has been far beyond the best expectations.

Mr. D. E. Jones, Inspector for the Welsh Division, reports—

During the past two years there has been an undoubted improvement in the equipment of Science and Art classes, especially in the counties of Glamorgan and Monmouth. In these two counties many centres have had the advantage of the services of travelling instructors engaged by the county councils in Art, Machine Construction, Steam, Geology, Mining and Chemistry.

I have several times been told that committees would be more ready to expend money on apparatus if they felt sure that the teachers could and would make proper use of the apparatus when supplied. In this connexion, whilst recognising the excellence of much of the present work, one may indicate two directions in which improvement is to be looked for in the teaching of science classes. In the first place a student who is mainly fed upon facts, laws and statements without proof or illustration is bound to suffer from mental indigestion, to lose appetite and interest. More attention should be paid to method in teaching. There is force in the argument that considerations of time and expense make it necessary to take much on trust; that progress would be slow if teacher and pupil had to discover and verify everything according to the methods of scientific research. But these methods may be illustrated in simple typical cases, and much would be gained if more care were taken to preserve a logical sequence in the treatment of a subject: to keep clearly before the class the connexion between what has gone before and what is to follow; to point out clearly where a new step in the reasoning is made or where a fresh appeal to experiment is required. In the second place, it is clear that the teaching in many classes suffers from the teacher's want of skill and experience in handling apparatus, even in preparing and performing simple experiments. In a large proportion of evening Science classes the teachers are masters of elementary schools. Some of these have had the advantage of attending courses at South Kensington or the provincial University Colleges; but the bulk of them have to depend on what they have seen and learned in the Training Colleges. Here the Science teaching is sometimes weak on the practical side. In a report on one Training College in which experimental science is taught I have had occasion to point out that there was no laboratory, lecture-table or even a simple bench with water-sink and gas supply. (I believe this is now being remedied.) It was not unnatural to expect better things of the Day Training Colleges, which are much more adequately staffed and equipped on the Science side. But I find no indication that the students benefit to any proportional extent in the study of experimental science. The bulk of the students in Day Training Colleges *aim* at getting an University degree. They are advised that the course for the London Science degree is more arduous than that for the Arts degree, or that it will not fit in so

Appendix A.
Minutes, Circulars, and Reports.

well with their other work; and, as far as I can ascertain, the amount of experimental or laboratory work done by the average student in training is very small. This is all the more regrettable because the advantages thus lost are precisely those which are most difficult of access to a schoolmaster when he has settled down in charge of a school.

Drawing in elementary schools is making satisfactory progress, and I am often told by schoolmasters that its introduction has exercised a beneficial effect on other subjects, *e.g.*, geography, map-drawing, and general neatness in paper-work. Most of the recently-built schools are admirably lighted; but in some of the older schools the lighting is inadequate, low, and entirely from the back. During the lesson or examination the children turn their paper sideways, or prop the slates on their left arms so as to get more light; and managers should understand that the effects of this are bad. Even in May, and at two o'clock in the afternoon, I have examined a school in which very few of the children could see to draw properly.

Two educational movements of vital importance to Wales have now attained their respective objects. The various county schemes for Intermediate Education (except that for Glamorgan) have been approved and many of the schools are now in working order. The University of Wales has already held its first Matriculation examination; its officers have been elected, and its Intermediate and Final Degree courses are practically settled. As a member of the University Court, and of one of the County Education Committees, I have had opportunities of observing the development of this work, and have been much impressed with the enthusiasm shown for educational progress. It is pleasant to reflect that some of those who might be expected to suffer most from the establishment of public secondary schools,—head-masters of private schools, and also of some elementary schools where much interest has been taken in upper and ex-standard boys,—have most unselfishly aided in what they have felt to be for the public good. The experience gained by our County Education Committees may at some future time be of service outside Wales; and in the Principality itself the effects of working together for one common object in the establishment of the University have already proved valuable. Both these movements are bound to affect the work done under the Department in Wales; the University, perhaps, indirectly, and mainly through the normal students in Day Training Colleges; the Intermediate Schools more directly by Science and Art Classes held in them, both in the day school proper and in the evenings. I do not think that many of our new Intermediate schools will become organised Science schools; the number established is large and the funds are small; so that few of them, excepting in Glamorganshire, would be able to provide the equipment and staff required for an organised Science school under the new rules. But all the county schemes contain a clause to the effect that "the county school shall be so conducted "as to allow of a grant being made in aid of it . . . by the Department "of Science and Art." I have already paid visits of inspection to three Intermediate schools in Merionethshire and two in Carmarthenshire; and I expect shortly to pay similar visits in Pembrokeshire.

It should, perhaps, be pointed out that it is on account of the operation of the Intermediate Act that only a relatively small proportion of the money received under the Customs and Excise Act is devoted in most Welsh counties to technical instruction. In the county of Glamorgan the Intermediate Scheme has been blocked by questions relating to the Gelligaer Endowment, and no special rate for intermediate education has been levied; but even in this county contributions towards the building of intermediate schools amounting to 36,000*l.* have already been paid out of the Customs and Excise money, and it is intended to pay a further 9,000*l.* in due course. In Monmouthshire a rate of ½*d.* in the £ (producing 1,783*l.*) is devoted to technical instruction, and an equal rate to intermediate education; and the Customs and Excise money is divided equally between the two objects. In the remaining Welsh counties a considerably larger proportion of the Customs and Excise money will be devoted to intermediate education.

Mr. H. Wager, Inspector for the West Riding of Yorkshire Division, reports—

I commenced work in April 1894, and during the session have been engaged in the following :—

Visiting Examination Centres.

Inspection of Science and Art Schools and Classes.

Appendix A.

MINUTES, CORRESPONDENCE, AND REPORTS.

Inspection of Organised Science Schools.
Inspection of New Chemical Laboratories.
Inspection of Training Colleges.
Superintending Training College Examinations.
Examinations in Drawing and Manual Work in Elementary Schools.

Science and Art Schools and Classes.—The equipment in Science and Art Schools and Classes for teaching Science is on the whole fairly satisfactory, and in the majority of cases appears to be improving. I find that committees, as a rule, are very willing to do all they possibly can to supply any deficiency in apparatus when it is brought to their notice; and in many cases where the apparatus is incomplete, it is to a large extent the fault of the teacher, who would have been supplied with the proper amount, had he made a requisition to that effect.

The teaching is also fairly satisfactory. There are very few really bad teachers, and so far as Physics and Chemistry are concerned there is a strong tendency towards making the teaching thoroughly experimental. In Biology, Botany, and Physiology, there is at present no really satisfactory practical teaching. In the majority of classes a small amount of dissection is done, and a few chemical experiments are performed, but systematic practical work is not attempted. I think much good would be done if the Department would issue some simple scheme of practical work in each of these subjects, as has been done for chemistry. Teachers are most anxious and willing to make their teaching as intelligent and rational as possible, but owing to their own lack of practical training in the subject, are unable to devise a scheme of practical work for themselves. In this respect I find that teachers are, as a rule, much benefited by a short course of instruction at South Kensington. I have been much struck by the bright intelligent way in which their teaching is illustrated, as compared with those teachers who have not had the advantage of a good practical course.

Organised Science Schools.—I have visited all the Organised Science Schools in the district at least once during the year, and most of them two or three times. I am pleased to be able to report that the Science teaching is generally efficient and satisfactory. Especially is this the case in the larger Organised Science Schools in connexion with School Boards, Technical Schools, and Secondary Schools where there is a large supply of apparatus and a good staff.

In the smaller schools where the equipment for Science instruction is barely adequate and the staff small the Science instruction suffers considerably. This applies, however, to two only out of the 13 Organised Science Schools in the West Riding District.

The new regulations for Organised Science Schools are generally spoken of favourably, and there is a general consensus of opinion in the district that they will do much to place the scientific and literary sides upon a firmer and more equal basis than heretofore.

Drawing in Elementary Schools.—The teaching of Drawing in Elementary Schools, although painstakingly and thoroughly done in the majority of cases, is not made sufficiently interesting to the scholars. I have been much struck by the monotonous and uninteresting nature of the copies set for Standards I. and II., but now that drawing from natural objects is insisted upon by the Department we may hope for some improvement in this respect. In the higher standards the work is more varied, and scale drawing, Geometry and Model are always made more or less interesting, but Freehand is scarcely, if ever, taught in a very interesting manner. There is too much mere copying of examples, and not sufficient use made of the black board to illustrate general principles. I find, however, that teachers are, as a rule, very willing to adopt the Inspectors' suggestions, and I trust that improvement may be effected by this means.

Manual Instruction.—In Manual Instruction, chiefly woodwork, the results obtained, both in Organised Science Schools and in Elementary Schools, are generally very satisfactory. Much care is taken to make the scholars neat and accurate in their work, and they are always required to make drawings to scale of the work to be done in the workshop, and to work according to these drawings. There is a tendency in most schools now to depart somewhat from the manufacture of simple joints, as soon as some facility in the use of the plane, the saw and the chisel has been acquired, and to take up the manufacture of simple, useful objects such as soap boxes, towel rails, flower pot stands, &c., and this has largely increased the interest of the scholars in the work, and anifestly a step in the right direction.

Work of the County Council.—Much good work is being done by the West Riding County Council and by the County Borough Councils in the district for technical and scientific instruction. The West Riding County Council has an elaborate and far-reaching scheme by which aid is given to students and teachers in all parts of the country within its administrative area. Mention may be made more especially of the system of scholarships and exhibitions to schools and classes under the Science and Art Department by means of which students who are unable to pay the fees are enabled to attend classes free. In some cases the scholarship includes railway fare, and students desirous of carrying their education further than can be done in their own immediate neighbourhood, are enabled to attend classes in large towns and so get instruction which would be otherwise quite unobtainable.

Teachers are assisted by grants to enable them to pay the necessary railway fare and fees in order to attend the Saturday classes for teachers, at various centres in the county, in Chemistry, Physics, Biology, Manual work, French, &c. These classes have been of immense benefit to teachers, inasmuch as a strong point is made of giving instruction in the methods of teaching the subjects taken.

Evening Continuation Schools.—Aid is given by the County Council to Evening Continuation Schools by means of grants for technical and Science subjects, on behalf of those scholars who do not take standard subjects under the Education Department. The County Council insists that these subjects shall be taught experimentally as far as possible, and the classes are visited and reported upon by the County Council Inspector.

I have, occasionally, been able to visit such classes, in the course of my inspection of the classes under the Department, and, so far as I am able to judge, from very few visits, and from the reports of the County Council Inspector, the teaching seems to be on the whole satisfactory, and suited to the needs of the scholars.

In concluding my report I should like to take this opportunity of expressing my thanks to F. N. Cook, Esq., Organising Inspector of the West Riding County Council, for his courtesy in supplying me with copies of his reports on Evening Continuation Schools and Science and Art Classes, aided by the County Council,—to clerks of school boards who have kindly supplied me with copies of reports and other papers, and to those special local secretaries who were good enough to send me copies of the arrangements made by them for the Science and Art examinations in their districts.

Mr. F. Pullinger, Inspector for the Oxford Division, reports—

The Oxford district, which comprises the counties of Oxon, Bucks, Berks, Wilts and Gloucester, contains about 150 Science and Art schools and classes, seven Training Colleges (six residential and one day) and about 1,500 elementary schools taking Drawing under the Department. The 150 Science and Art schools and classes include seven organised Science schools (six day and one night) and 15 Schools of Art (with four branch schools).

All of these schools have during the past year been inspected either by myself and the two sub-inspectors stationed in the district or by the four temporary drawing inspectors.

A very great variety of schools has come under my notice. Besides the elementary schools, and the evening continuation schools which are generally conducted in connection with them, there are evening Science and Art classes of every grade, from the single classes carried on in the villages to the large aggregations of classes conducted in Science and Art Institutes and in Municipal Technical Schools. Classes in connection with the Department are carried on in University College, Bristol, and in the University Extension College, Reading. Pupil teachers' classes carried on by the managers of elementary schools are quite common, and in many instances county councils have established classes in various subjects for elementary teachers of all grades. Of the classes which are carried on during the daytime some are conducted in elementary schools [higher standards], some in grammar schools, and some in [illegible] secondary schools and large technical colleges. Amongst the latter may be mentioned the [illegible] Municipal Secondary School and the Merchant Venturers' Technical College at Bristol, both of which are conducted under the rules for Organised Science Schools. Finally, there are seven training colleges in most of which, classes both in Science and Art are carried on.

The evening classes present every variety of efficiency. Some of them, such as those at the Municipal Technical School at Oxford, are highly satisfactory both in their equipment and in the efficiency of their teaching staff. On the other hand, many of the rural classes are of the poorest kind. In them the teachers are not unfrequently the teachers of the neighbouring elementary school whose knowledge of science in its practical aspects is often very meagre and whose art qualifications do not as a rule go beyond the "D" certificate. In the case of one Art class I found that although the class had been in existence for three years no success in the May examinations had yet been obtained. In not a few cases, however, I have found that the classes conducted by elementary teachers in both Science and Art have been most successful. In the case of Art I may mention the class held in the elementary schoolroom at Aston Clinton (Bucks), and in Science the Geology class conducted in the Wesleyan School at Witney (Oxon) as being excellent examples of the manner in which evening classes should be carried on. At Brimscombe (Gloucestershire), there is an admirable institution conducted somewhat on the lines of a London Polytechnic, which shows how much can be accomplished when there is a thoroughly energetic local committee and an earnest and painstaking teacher. I find that in the rural districts evening classes suffer exceedingly owing to the very backward state of elementary education. In one locality in Wiltshire the teacher bitterly complained of the condition in which his pupils came to him. Mr. Dolman, the sub-inspector in charge of the Wiltshire sub-district reports that in many schools the scholars are incapable of assimilating the instruction given, that they have not a sufficient knowledge of English to enable them to write answers to simple questions and that they would be more profitably engaged in learning reading, writing, and arithmetic; and two or three members of the Wiltshire Technical Education Committee have expressed themselves in similar terms. I am convinced that technical instruction of all kinds is much hampered owing to this cause. In Oxfordshire the standard of total exemption from attendance at school is the fourth in the great majority of schools. This implies that a very large proportion of the boys and girls leave school without a knowledge of the rule of three or fractions. Such a preliminary education is hardly likely to prepare children for their future studies in science and other technical subjects. And if deficiencies in elementary education are conspicuous in their effects on technical instruction in the villages, almost equally are the deficiencies in secondary education to be observed in the towns where more advanced instruction in Science and Art is carried on. It is much to be hoped that before long we shall have a system of good popular secondary schools in town and country alike. Until then the higher branches of technical education can only be carried on under considerable difficulties.

The classes for pupil and other teachers do not need much comment. I may mention, however, the very successful classes carried on at Chippenham in science and manual instruction, as well as the pupil-teachers' classes conducted by the Bristol School Board, who have appointed a specially qualified science instructor. I hope that in future county councils will be able to extend their operations in the direction of summer meetings for the training of teachers and that pedagogics and method will be included in the curricula. Such classes have been very successfully carried on for some years by the Devon and Somerset councils acting in concert.

Before considering the position of the secondary schools which have come under my notice, I must allude to the very successful work which is being carried on at the University Extension College at Reading. This college was founded three years ago under the auspices of the Oxford Delegacy for University Extension teaching. Adequate buildings have been acquired through local private munificence and, through contributions received from various public bodies, it has been possible to equip the college in the most satisfactory way, and to engage an exceptionally strong staff of teachers. The staff of teachers is indeed the strongest in any institution connected with the department in the Oxford district. Among the contributing bodies may be mentioned the Science and Art Department, the Board of Agriculture, Christ Church, Oxford, the Town Council of Reading, and the County Councils of Oxon, Berks, and Hants. As the name of the college implies, much of the instruction is provided especially for adults. Classes are carried on during the evening and the daytime in science, art, literature, and in technical and commercial subjects. Special arrangements are made for giving instruction to teachers, especially those sent by the neighbouring county councils. The most recent development has been the addition of a department of agriculture under Mr. Gilchrist; the department has been recognised by the University of Oxford, and that body has sanctioned the award of [illegible] in agriculture. The college has been successful both in the results of the teaching and in the number of students in attendance. I consider it to be a unique instance of what can be accomplished by the friendly co-operation of the various educational agencies in existence.

There are about 25 secondary schools in the district conducting classes in connexion with the department. The Merchant Venturers' Technical College at Bristol, which, however, has a department for higher instruction as well, is perhaps the most important of these. There are several grammar and [illegible] schools (both for boys and girls), and there are 5 higher grade schools. Some of these schools are excellently carried on, others not being very efficient either in equipment or staff. One or two of the county councils give [illegible] to these schools, but others, such as those of Berks and Gloucester, do not seem to realise the importance of promoting technical instruction in secondary schools. In many instances, notably at Burford and Wantage, I have found that the headmasters have been fully alive to the value of technical education, but in a few this is not the case. Some headmasters, too, appear to have fallen into the common error of endeavouring to turn their schools into first grade schools when the circumstances of the locality demand a good school of the second grade. In one school which possesses fine buildings erected as late as 1890, I found that no room had been constructed for science teaching of any kind, either theoretical or practical. The governors of the school have up to the present received no aid from the county council, but notwithstanding their financial difficulties they have now, at the suggestion of the department, made all arrangements for the erection of a properly equipped science class-room and chemical laboratory. In another school, a small rural grammar school, I found that the trustees had not made the requisite returns relating to the endowments to the Charity Commissioners, as they are by law required to do. In this case I failed to satisfy myself that the income of the school was being properly applied.

Only five of the secondary schools are conducted under the rules for organised Science schools, and I can make no remarks which are applicable to them as a whole as they are so very different in character. Indeed, the district contains examples of all the chief types of organised Science schools in the country. The school at Swindon is a higher grade board school, the school at Salisbury is conducted by the managers of a Church of England elementary school, and that at Oxford by the managers of a Wesleyan elementary school. At Cheltenham there is a second grade grammar school, and at Banbury there is a municipal secondary school, the governors of which are the town council. And, finally, at Bristol there is the Merchant Venturers' Technical College, which is conducted by the Merchant Venturers' Society and aided by the town council. I cannot, however, refrain from pointing out the good effects produced on the schools of the higher grade type by the provision contained in the Directory of 1894 that literary subjects essential to a good general education should be included in the curriculum. The original time-table submitted by one of these schools contained no subject (other than Science and Art) in the first year's course, except shorthand and book-keeping. It is needless to say that the Department did not accept such a time-table. I have found that the science teaching in one or two of these schools is not altogether satisfactory either in method or in illustration.

The science teaching in Training Colleges is in some cases, notably at Cheltenham, exceedingly good. But only one college possesses a chemical laboratory, and several of the others are inadequately equipped both in the matter of apparatus and suitable class-rooms. In one case I found lessons in [illegible] were being given with little or no illustration. I should certainly have thought that it would have been superfluous to have pointed out to the managers and teachers of Training Colleges that efficient science teaching cannot possibly be carried on at all without the performance of numerous experiments, and the exhibition of an adequate number of diagrams and specimens. I can, however, speak more highly of the methods of teaching adopted in one or two of these colleges, and I must also mention that in one or two of them the students are trained in giving object lessons to children, in the adjoining practising schools.

I will now allude to a few points which are applicable to all the types of schools which have hitherto been dealt with. In the first place, I have found that on the whole classes are only indifferently supervised by the local committees. It cannot be too strongly insisted upon that adequate supervision in a very large number of cases, and especially in the smaller schools, makes all the difference between a success and a failure. If those members of committees, who consider that everything depends upon the teacher, could see the effect produced by the active and vigorous co-operation of the managers of some of the more successful schools in the district, they would not lightly regard the duties which they have voluntarily undertaken to perform. With regard to the financial conditions of the schools, I am glad to report that, owing mainly to the help provided by the county councils, very few schools are in a precarious condition. I find that the teachers are not as a rule paid by grants only, or by grants and fees, but that they receive fixed salaries with, in many cases, a proportion of the grant as well. I have only met with one serious case of farming, and that was in a school not aided by a county council. With regard to equipment, I must first point out that elementary schools are very largely used as class-rooms, particularly in country districts. Whenever this is the case, local committees should not lose sight of the fact that the furniture in elementary schools is often intended for children, and cannot, with any degree of comfort, be used by adults. At a recent examination in Wiltshire, I found several adults who were compelled to sit for three hours on forms which were far too small and exceedingly uncomfortable. In some of the larger towns, the classes are now located in large buildings permanently set aside for educational purposes. Buildings of this kind have been erected during the past year at Oxford, Calne, High Wycombe and Salisbury. A new Higher Grade Board School has been erected at St. George, Bristol, and plans have been made for new technical schools at Swindon (at a cost of 12,000*l.*) and at Lydney. Some of the grammar schools have very inconvenient buildings, and one of them adjoins property in such an unsanitary condition that the health of the scholars is considerably jeopardised. The ventilation of class-rooms should be more carefully attended to; I have met with a few cases where inspection, to say nothing of teaching, has been rendered almost intolerable by want of attention in this matter.

I confess that as regards the proper supply and use of apparatus I have been much disappointed. The Department's list of indispensable apparatus is far too often taken as the maximum required. In a very large number of schools the performance of experiments is looked upon merely as a luxury or means of attraction, rather than as an absolutely necessary adjunct to all Science teaching; and I regret to say that these remarks apply to nearly every type of school. Even in some of the larger schools, where money is comparatively plentiful, the amount of apparatus is inadequate. In one school I found that the local committee had returned a balance of unexpended money to the county council, notwithstanding the fact that there was a serious deficiency in the apparatus used for the Physiology classes. In another school, a microscope had been obtained because it is mentioned in the Department's list, but it had not been used presumably because microscopic slides are not also mentioned in the list. In very few schools indeed have I found a proper demonstration table for the performance of experiments. Even when a classroom is permanently set aside for Science teaching, it very frequently does not contain a demonstration table. I am of opinion that the Department's regulations with regard to the proper illustration of Science subjects might, with advantage, be made much more strict, especially as in so many schools apparatus can always be had by applying to the county council for aid.

The subjects taken up in a school are, as a rule, applicable to the special needs of the locality. At Swindon and Wolverton, for example, special attention is paid to subjects which bear directly upon the industries carried on in the works of the G. W. and the L. & N. W. Railway Companies respectively. Agriculture, too, is taken up in many of the villages, though it is not often illustrated by simple chemical and other experiments as it should be. In not a few cases, however, the subjects depend upon the certificates possessed by the neighbouring elementary schoolmasters, a state of things for which I see no remedy at present.

With regard to the character of the teaching I have only found one or two teachers who adopt the new methods which have been so much advocated during the past five years. In far too many cases the instruction consists in hammering as many facts as possible into the brain of the student, no attempt being made to induce the student to think for himself, to make his own observations from the experiments performed and to form for himself the conclusions to which the observations lead. It is true that in most schools the Socratic method of teaching by question and answer is largely employed, but when this is the case the questions addressed to the student appeal to the memory rather than to the intelligence. I must, however, state that in one of the grammar schools I listened to a lesson in chemistry, which in the matter of method was the most perfect which I have ever yet heard. I cannot altogether blame the teachers for this want of method. The session is very short and time does not always admit of the best methods being continually used if the whole of the syllabus is to be covered. Then again, the methods to which I have referred have not yet been prominently brought before the great mass of the teachers in Science schools. These defects in method will no doubt be remedied in time and much might at once be done if county councils would form classes in pedagogics as I have already indicated in another part of this report. Such classes might also be included with advantage in the summer courses for teachers held at South Kensington.

Turning now to the work of the county councils, I must first state that the counties of Oxon, Bucks, Berks and Wilts allocate the whole of the residue received under the Local Taxation Customs and Excise Act, 1890, to technical education, while Gloucestershire allocates only one half. All the counties except Gloucestershire have also appointed paid officials to act as organising secretaries for Technical Instruction. And all of the counties, again excepting Gloucestershire, have applied to the Department for extracts from the reports of the Department's inspectors. None of the counties raise a rate under the Technical Instruction Act, 1889, but rates have been raised amongst others by the local authorities at Salisbury, Swindon, Horfield and Calne (Town Council). The County Council of Wilts have also raised a rate in the Poor Law Union of Calne at the instigation of the board of guardians; this fact is, I think, unique in England. It would be impossible in this report to give anything like an adequate account of the methods adopted by the various councils in promoting technical instruction. It must suffice here to say that the schemes adopted present examples of almost every kind of scheme devised by English county councils. In Oxfordshire the whole of the fund is administered directly by the county council with the exception of grants made to two town councils. In all the other counties there is a much greater devolution of authority. For instance, in Buckinghamshire I met a local secretary who informed me that his committee was the X—— local committee of the Y—— district committee of the North Bucks divisional committee of the Technical Education Committee of the county council. I much doubt whether the interests of technical education are best served by such a devolution of authority as is implied by the name of this committee. The practice, too, of handing over money unconditionally to urban authorities has not very often proved successful. I have found that in some of the smaller boroughs the money thus received is not being applied in anything like the best possible manner. Where, however, the county council exercises a very strict control over the bodies to whom money is granted, very good results can be obtained. Thus in Wiltshire grants for attendance, apparatus, &c., are made to committees whose areas of operation are the Poor Law Unions. The Science and Art classes carried on by some of these committees represent, I think, some of the most successful efforts carried on by county councils in the Oxford district. Another very successful experiment is the Berkshire Travelling Farriery School, which is now being copied by several counties. Before leaving this part of my report, I must not omit to mention that 20 Science and Art classes in Wilts were discontinued during the year, owing partly to a change of policy on the part of the county council, partly to the opposition created by the formation of evening continuation schools and partly to the apathy of the local committees.

Early in 1896 the Oxfordshire County Council applied to the Department for the advice of the resident inspector as to the means to be adopted for putting technical education on a better footing in the county. The Department placed the matter in my hands, and I accordingly made a detailed investigation of the whole work carried on by the council. My report, which was afterwards forwarded to the council by the Department, was practically accepted in its entirety by the council. I understand that a similar application to the

Department for the advice of an inspector will shortly be made by the Gloucester City Council.

During the year I have conducted upwards of 100 drawing examinations in elementary schools. From what I have myself observed and from what I have gathered from the inspectors who have assisted me it appears that throughout the whole district there has been a steady and uniform improvement, though in many localities the improvement has been slow. Drawing seems to be very popular with the children and where a school has not met with success this has been generally due to a want of good method on the part of the teacher. I am very pleased to report that the School Board for the Forest of Dean have appointed an organising drawing master—the head teacher from one of the neighbouring Art Classes. He holds the Art Master's Certificate of the Department and his work in the elementary schools has produced very excellent results. The example of this School Board might with advantage be more widely followed. There are but few evening continuation schools taking up drawing except in Wiltshire. Mr. Dolman, who has inspected these schools, reports that much of the work done in the county is worthy of praise. Schools in rural districts, however, suffer very much in February, March and April, owing to the falling off in the attendance, a fact which is largely due to the employment of the children in gardens and allotments.

I append the report of Mr. Selwyn Edwards on the Elementary School work in North Oxon and West Berks and on his inspection of various Science and Art Classses.

"During the year ending April 30th, 1895, I have personally inspected 233 elementary schools in drawing, 5 classes in manual instruction, and 14 Science and Art classes.

ELEMENTARY SCHOOLS.

"In the elementary schools of the district there has been a general but slow improvement in the teaching of drawing. The work of many schools is all that could be desired, and where the teachers have taken pains to improve their methods the results have been very satisfactory in both town and country schools. At the latter where one teacher only, as a rule, has to carry on at the same time the other classes of a mixed school, much credit is due to those who have obtained such good results under disadvantageous circumstances. Some of the country schools equal, if they do not excel, the best of the town schools, where the staff of teachers and assistant teachers is ample and the undivided attention of a teacher can be given to one standard often in a separate class-room. In a few cases only amongst the teachers is there any originality shown, and it is frequently the case that those possessing the highest certificate of qualification are very indifferent teachers, failing to give to the lower standards in the school the close attention required or the drill in what seems to them trivial details, but which is nevertheless so necessary for a thorough grounding and for attaining the certainty of success in the higher standards. The teachers have themselves seldom been taught with good method, and those that have attended Art classes in the hopes of improving themselves frequently complain that they have learnt no more than if they had given the same time to practising at home. In fact, the art of teaching is not taught them. Experience, however, is beginning to teach them better than they have been generally taught themselves. It has been my constant endeavour to keep the attention of teachers to the object in view, viz.:—to instil into their pupils the habits of neatness and accuracy, and to cultivate the faculty of accurate observation, using drawing as a means to that end and as an educational instrument.

MANUAL INSTRUCTION.

"The workshops at Reading and Witney are admirably managed and are showing excellent results.

SCIENCE AND ART CLASSES.

The 14 classes visited were taught either drawing, building construction, or mathematics. The teaching in elementary mathematics and building construction was thorough, but in drawing the instruction appeared to be frequently wanting in method in the elementary stage. The first stage of model drawing seems universally to present much more difficulty than it should do, owing to the want of recognition of first principles. The attempt to apply empirical rules of linear perspective more often than not confuses the students, and it appears to me that unless the principles involved can be really thoroughly taught, and this takes a longer time than can generally be given, it is better to adopt a simpler method founded upon the principles of projection."

Mr. W. B. Dallas Edwards, Inspector for the East Midland Division, reports—

The East Midland district includes Derbyshire, Nottinghamshire, Lincolnshire, Leicestershire, and Rutlandshire. The whole area of the district is 5,462½ square miles, and the population in 1891 was 1,806,415.

The Science and Art Schools in the East Midland district are distributed as follows :—

Derbyshire - - - - -	73
Nottinghamshire - - - -	30
Lincolnshire - - - - -	48
Leicestershire - - - - -	33
Rutlandshire - - - - -	2

The total number of classes (Science and Art) was 207. Of these 186 entered for the May examinations.

These numbers are those of the Schools whose students intended to sit for the May examinations.

Many classes fell through soon after the beginning of the Session, nearly always in consequence of not enough students coming forward to make it worth while to continue the classes. In one or two instances it was found impossible to get a teacher.

The numbers of Elementary Schools taking drawing during the whole year on the 30th April were as follows :—

Derbyshire - - - - -	330
Nottinghamshire - - - -	300
North Lincolnshire - - - -	190
South Lincolnshire - - - -	394
Leicestershire and Rutlandshire - -	331
Sheffield district (*part of*) (North Nottinghamshire and Derbyshire) - - -	88

There are three Training Colleges in the district, two residential for schoolmistresses (at Derby and Lincoln), and one Day Training College (at Nottingham).

It will be seen from the figures given below that Derbyshire is best supplied with, and takes most interest in, technical education.

—	Population (1891).	Number of Schools and Classes under Science and Art Department
Derbyshire - - - -	432,414	79
Nottinghamshire - - -	505,311	38
Lincolnshire - - -	467,281	51
Leicestershire - - -	379,286	37
Rutlandshire - - - -	22,123	2

Science and Art Classes may be considered under three heads—

(*a.*) Training Colleges.
(*b.*) Science and Art Classes and Schools.
(*c.*) Organised Science Schools.

(*a.*) *Training Colleges.*—I have made six visits altogether to the three training colleges in the East Midland district. Four of these visits were paid in order to see and make myself acquainted with the officials of the colleges, and to help in the examination in Science and Art subjects held by the Department in November and December. Two visits were for the purpose of formal inspection of the teaching; both these were paid to the Derby Training College; the Lincoln Training College will be visited before the Science and Art Department examination in July.

The authorities at the Derby Training College are making arrangements for their students to obtain teaching in X*p.* at the Gerard Street Higher Grade Board School at Derby. They also propose to have a small laboratory fitted up in the college so that one or two students may obtain extra practice in chemical manipulation if they wish to.

(*b.*) *Science and Art Classes* are held in—

Elementary schools.
Grammar schools.
Other buildings.

The classes held in Higher Grade Board Schools are, as a rule, well equipped in every way for Science teaching. In many cases the rooms are not well adapted for Art purposes.

In the case of *most* of the Art classes (Model and Light and Shade especially) held in the evening in National and board schools in both town and country districts, the lighting and seating arrangements are very bad, and it is a farce students trying to learn to draw properly under these conditions.

I would suggest that the Department should insist more strongly on more trouble being taken to put things on a better footing.

In some or many cases improvements could easily be made with a very little expense. The teaching of the Art subjects in Group A. on the whole, except in some of the larger schools of Art, and where there is an Art master teaching them, appears to be in a less satisfactory state than that of the Science subjects. In many classes the teacher of Freehand and Model Drawing has only the D certificate, and he has forgotten or not kept up his knowledge. I have come across many classes in Model Drawing in which most of the students seemed to be ignorant of such an elementary fact as that all parallel lines appear to meet in the same vanishing point; the teachers in teaching also ignore altogether the position of the horizontal line about the plane on which the object lies.

Most schools seem to be fairly well supplied with models and casts.

Mr. Porterfield reports :—

"In the Art classes that have been visited I found that the Model Drawing was by far the weakest subject taught. The system of teaching this subject does not seem to be at all a thorough one in the majority of cases. Demonstrations on the blackboard should be far more frequently resorted to than they are, and these demonstrations should, as far as possible, combine the object drawing with perspective lessons. In nearly all cases the students are taught to draw the model in front of them, instead of using such model as an illustration for the principles involved in all similar objects."

"Freehand Drawing would be considerably improved if a few minutes were devoted in each lesson to explaining the principles of ornament that are involved in the copy before them."

Mr. Baker reports :—

"During the past session I have visited 34 Science and Art classes during the times at which lessons were being given. A large number of these were classes in the principles of coal-mining, and chiefly in the district around Chesterfield."

"Aided by the Technical Education Committee of the Derbyshire County Council, and superintended by local committees, these classes are doing good work, the number in attendance in some cases averaging 30."

"The teachers are practical men in positions of authority in the mines, and evidently enjoy the confidence of their equally practical pupils. The lectures I listened to were uniformly good, although betraying occasionally slight weaknesses in general scientific knowledge on the part of the teacher."

"I was informed that many working colliers are restrained from attending by a feeling of distrust of their ability to perform elementary arithmetical calculations and to write sufficiently well, the taking of notes, and writing of answers to questions which are based upon the various parts of the lecture being an essential part of the work, and one which the county council encourages by a generous prize scheme. The work of the Evening Continuation Schools may be looked to to remove this difficulty as time goes on."

"*Apparatus.*—There seems to be little provision made for performing the experiments required to illustrate those parts of the course in which some knowledge of chemistry is almost essential, the apparatus at the service of the teachers consisting of lantern, slides, and diagrams. In Leicestershire, where the Technical Education Committee undertakes direct control of the classes in this subject, employing one teacher to visit all centres, a complete set of apparatus to illustrate all parts of the course is provided, and is carried as required from centre to centre. With reference to the other science classes I visited, a common defect is the lack of a suitable table upon which to perform experiments; but in only one or two cases did the teaching fall to the level of communicating book-knowledge only."

"*Art Classes.*—The pupils of most of the small Art classes which I visited were largely teachers, and pupil-teachers in elementary schools. While the successes obtained by the future teachers in elementary schools are a gratifying feature of the work of these classes, it is to be considered whether something more can be done to secure for such pupils some training in the art of teaching drawing, success in passing the examinations early in the teacher's career often leading to neglect of the subject when the art of teaching becomes more particularly a subject of study."

"*Aid rendered by County Councils to Technical Education.*—It will be noticed that the Leicester County Council has rendered valuable service to the county by providing training for teachers in the teaching of elementary science and in manual instruction. They thus secure sufficient instruction in the Evening Continuation Schools of the county, most of which are under their control. Their assistance of the grammar schools, by fitting and furnishing chemical laboratories, providing physical apparatus, and contributing part of the salary of the science teacher is also contributing materially to the facilities for technical education in the district."

The Science teaching, as a rule, is excellent and in the majority of cases the lectures are very well illustrated by experiments and apparatus. There are of course exceptions to this, but it is generally caused chiefly by want of money and in small villages and towns. I have also come across cases where things could, I believe, be put on a proper footing if a slight effort were made to raise local subscriptions.

The superintendence and visiting of the classes everywhere is very much neglected, and where this is the case it generally means that the teacher is the moving spirit in the keeping up of the class; in other words, that the Department's regulations are not honestly carried out, the Committee not taking the slightest interest or having the slightest knowledge as to whether things are being properly conducted or not.

During the coming session I intend to meet as many of the Committees of the schools where the above conditions are obviously the case, and explain their duties to them.

The total number of Science and Art Classes in the East Midland District during the Session 1894–5 was as follows:—

	Total Number.
Number visited by District Inspector - - -	95
„ „ „ Mr. Baker - - - -	34
„ „ „ Mr. Cooke - - - -	13
„ „ „ Mr. Porterfield - - -	15
Total number visited - - - -	157

About 10 or 12 fruitless visits were paid, no notice having been given to the Department of the class not being held.

Many of these classes were visited several times where it was found necessary to do so. There were a few classes which are held in other buildings (*e.g.*, at Melbourne in Derbyshire) which are not in a very satisfactory state.

Organized Science Schools.—There are ten of these in this district. They vary considerably in their standard of excellence. The two largest and most flourishing are the Gerard Street (Derby) Higher Grade Board School and the Wyggeston Boys' School, Leicester.

The Organised Science Schools at New Mills, Heanor, Claycross, and the Alderman Newton's School at Leicester appear at present to be about equal as regards soundness of teaching and general tone. Next come the schools at Market Bosworth, Mansfield, Queen's Walk, Nottingham, and Lincoln. These last are very unsatisfactory in many ways.

Several new Organized Science Schools are about to be started—*e.g.*, Loughborough and Mansfield. The Nottingham School Board seem to be uncertain as to whether they will take the Organized Science School scheme up again.

One or two of the Organized Science Schools will certainly fall through as there will not be sufficient numbers to meet the requirements of the Department.

The question of opening an Evening Organised Science School at the University College, Nottingham, was started by the Board of Professors, but they came to the conclusion that it would not be practicable. Their chief argument against the scheme seemed to be that the students would not go over old ground again as they would most of them have to do in attending the organized courses.

Drawing in Elementary Schools.—The drawing on the whole, as far as I can judge, by comparing results, appears to be fairly on a level with that in other districts.

The drawing and general tone in the schools with regard to drawing in the various sub-districts of the East Midland District varies considerably. Although the Local and Assistant Local Inspectors as a rule seem to have done this work well, in one or two districts there appears to have been great slackness in holding the drawing examinations, and some of the teachers and managers show a little surprise and resentment at the regulations being strictly adhered to.

The country teachers in many places labour under great difficulties as they are unable to get tuition. A large number of them are not up to teaching Standard V. geometry and some do not understand fully even the scale drawing.

Mr. Baker says :—

"There is in some cases a tendency to accustom the pupils to reproduce with more or less accuracy certain examination tests rather than to train the eye to observe accurately form and proportion, and the hand to manipulate the pencil with freedom and delicacy, so that the educational value of the subject is in danger of being lost sight of. The freehand exercises are sometimes attacked with little intelligence, but the exercises on geometrical forms which the pupils of the third standard are required to work with ruler only, are often worked to dimensions which have been "crammed," and no reason whatever can be given for what has been done. In other cases it has been found that the regulation that these exercises shall be worked a little larger than the copy is carried into effect by increasing length and breadth equally. It will be concluded from this that while a certain dexterity of hand may be possessed by the pupils, they have had very little of what is included in the term 'hand and eye training.'"

"In the small rural schools where there is often only one teacher to cope with the work of all the standards, needlework having in many cases to be superintended at the same time, it is difficult to distribute attention over the school so as to secure satisfactory instruction for each standard and so the drawing often becomes mere unintelligent copying of lines. It seems to me that the suggestion contained in form 1294 (which is little acted upon) is capable, if carried into effect, of working great benefit in all schools—the suggestion that memory work might be advantageously introduced in all Standards. But more especially do I think that the difficulty of the small schools alluded to above may in this way be met, for some classes may be set to draw from memory of a previous lesson while another receives that

[illegible]
AND REPORTS

amount of instruction which the teacher, during the time at her disposal, is enabled to bestow."

"Model drawing is apparently the most difficult part of the course, and in very few schools do the scholars show an intelligent grasp of the subject. The teachers have made and are still making great efforts to cope satisfactorily with the whole of the Syllabus and a gradual improvement is certain. Many lament that they have been unable to get instruction in the methods of teaching. The Technical Education Committee of the Leicestershire County Council engaged an accomplished teacher with an Art Masters' qualifications to lecture to the teachers of the county, but his efforts appear to have been too limited in character. The new requirements of the Department that the drawing books containing the work of the year shall be examined and reported on will enable a better idea of the work of the schools to be arrived at, than the examination of the papers worked on the day of examination alone can possibly lead to."

Mr. Porterfield writes:—

"Generally the drawing in the girls' schools is of a higher standard than that in the boys' schools. Much more interest is shown in the work, which is consequently turned out much cleaner and neater."

"With regard to individual standards:—

"Standards I. and II. generally fall into the bad method of moving the slates and papers to suit the position of the line to be drawn, the pencils are generally held too stiffly, causing lines to be drawn by the whole of the arm and upper body rather than with the wrist and hand only. The theoretical knowledge is far too mechanical and parrot-like, and the actual knowledge of technical terms is generally very poor."

"Standard III. In the freehand drawing the ideas of proportion are lamentably weak, brought about chiefly by the system adopted in Standards I. and II. of teaching children certain fixed proportions such as squares, rectangles (6″×4″) only, instead of introducing as early as possible a general idea of obtaining proportional divisions of a line of any length. The ruler work is generally good.

"Standard IV. The same weakness shows itself in this standard as in Standard III. with regard to the ideas of proportion, the drawing of freehand also suffers considerably from a want of knowledge of what they are trying to draw. The ruler work on square and plain paper is generally of a high order.

"Standard V. Model drawing is first taken in this Standard, and from the first the scholars are labouring under a great disadvantage in that they are told nothing of the elementary principles of perspective to start with. This of course tells against the drawing of objects considerably. The system, as in vogue at present, is that the scholars are taught to draw a few solids by heart in a few positions and directly they are given any other object to draw, fail hopelessly to pieces; the reason being as above stated, the scholar being absolutely ignorant of the elementary principles of perspective. Were the first four or five lessons on Model drawing devoted to these principles, the drawing of objects would be greatly improved. The number of questions on the cards in Geometry is not sufficient to employ a scholar the whole time allowed for examination; in the average case the time taken for geometry does not exceed 15 or 20 minutes.

"Standard VI.—The work of this standard is usually excellent, with the exception of model drawing, which still shows the want of better training in Standard V.

"Standard VII. The solid geometry of this standard seems very much beyond the scope of the boys, for when questioned on methods adopted they cannot explain at all, thus showing that the teaching is again very parrot-like.

"Generally throughout the whole of the schools the teaching partakes very strongly of the cramming order.

"After Standards I. and II. are passed, the boys seldom know anything about the theory of drawing at all—forgetting all definitions ever learnt in elementary standards."

Mr. Cooke reports:—

"A large majority of the schools in North Lincolnshire are very good, and being situated in a purely agricultural district, although they have many and great difficulties to contend with.

"Of these difficulties, the principal seem to be :—

"(i.) Leaving school at an early age for the purpose of assisting the bread-winners of the family.

"(ii.) Irregularity of attendances due.

  "(*a.*) To the farmers, and often to the school managers, employing the children in the fields before they have passed the necessary standards.

  "(*b.*) To the distances at which the children live from the schools. The villages are generally of considerable area, and the population is therefore scattered.

"(iii.) The antagonistic feeling of parents, and in some cases of managers, to the teaching of drawing.

"(iv.) The limited drawing attainments of a large number of the teachers in this part of the county. A large proportion of the teachers are elderly women, and but few of them have the D.

"In many cases the failure of the school to reach a moderate standard of excellence is due as much to the want of method and of knowledge on the part of the teacher, as to the difficulties above noted."

The numbers of elementary schools in various parts of the district and in the different months are very unevenly distributed. Thus some of the sub-inspectors have considerably more schools to inspect in one month and the following months they have not got enough to occupy them. It is nearly always possible on these occasions for one sub-inspector to help another, but it would be much less expensive both in time and money if the examinations in drawing could be held at any time in the *six* weeks preceding the Education Department inspection. This arrangement has actually been in force for some time in the North Lincolnshire district, and it appears to work satisfactorily.

Manual Instruction in Elementary Schools.—During the last few weeks there has been a large increase in the number of schools that have been noted as holding classes in this subject.

The chief centres where it is taken are Nottingham, Derby and Lincoln. Besides these there are a few places scattered about the country where it is taught. In Leicestershire the county council practically will only help Slojd classes. These classes (Slojd) are good in their way and well conducted and fitted by the Leicestershire County Council, but the work involves a great waste of time; and though the "Slojdists" claim that it trains the children in being better able to use their hands, and makes them more accurate than the ordinary Carpentry, yet this is not borne out when their work is actually tested, taking also into consideration the time that is spent in each system of working.

Mr. Baker reports :—

"*Manual Instruction.*—I have examined only two schools in this subject. The form of instruction was very different in the two cases—wood carving and joint-making respectively. I hope to see an increase in the number of schools taking this subject; at present, accommodation seems a source of great difficulty."

Mr. Porterfield reports :—

"The manual instruction of the boys' schools is, as a rule, fairly well done, but would, I think, be greatly improved were more attention paid to an accurate use of the saw. The special drawing for Manual Instruction is not, as a rule, well understood; boys can generally draw what is wanted, but when questioned, show a very poor practical knowledge."

County Councils and County Boroughs.—I have not been able to devote as much time to investigating the work of the county council as I should have wished, but hope to have an opportunity of making myself better acquainted with this part of the work in the near future.

These appear to be doing good and effective work on the whole.

The organizing secretaries of some are anxious to work with the Inspectors of the Science and Art Department, notably Nottinghamshire and the Kesteven division of Lincolnshire, and it is greatly to the advantage of both the Science and Art Department and the county council to do so as I have practically proved in the case of Nottinghamshire.

As far as I can ascertain, Science and Art teaching and Technical Education in the East Midland district appears to compare favourably with that in other districts.

Appendix B.

Report by the Director for Science.

APPENDIX B.

Report by the Director for Science.

In reviewing the work of the Science division, other than that contained in my Lords' report, the principal points which are worthy of calling attention to are the following:—

There seems to be a steady rise in the standard of teaching throughout the country in most of the subjects of Science. This fact is emphasized by the slightly smaller number of candidates who presented themselves for examination, but who earned larger grants than estimated for on the basis of the preceding year, although the standards for the "pass" in the Elementary Stages and for the 1st and 2nd class in the Honours and Advanced Stages were well maintained. The "passes" in the Elementary Stage were more numerous, and the number of those who presented themselves and did not obtain 25 per cent. of the marks is less, than in the previous year, showing that the instruction in Elementary Science is better, and that ineligible candidates are prevented from presenting themselves.

It having been represented that students who did not pass in the Elementary Stage, but who were fairly prepared, were discouraged in pursuing their studies by being shown as having failed, my Lords have allowed a student who obtains about 40 per cent. of the total marks in that stage to be registered as "fair." Although this success carries with it no certificate and no payment, yet it is believed that the introduction of the "fair" standard will be beneficial and secure the continued attendance for further instruction of many of the students who obtained it. In those cases where the payment made by the Department towards scholarships, and where the earning of capitation grants in Organised Science Schools depended on a success, "fair" is considered as equivalent to the old 2nd class of this stage.

Though the increased Inspectorate has only been in existence for one year, yet this has been sufficient to show of what great value is the presence of representatives of the Department in the different parts of the country. The localities are, through these connecting links, more in touch with the central office. The Inspectors being on the spot are able to advise both the office and the locality on questions arising locally connected with Science and Art and Technical Instruction, thus saving a multiplicity of correspondence and expense, for it was often found necessary to send officers of the Department to make inquiries in order to grasp the true drift of some question which, through ignorance of local circumstances, was found to be obscure. Very nearly every Science class has been inspected during the past year, and the information contained in the reports on the inspection has been very full and of great use. The suggestion as to what action might be advisable for the Department to take has frequently proved valuable. Where the local authorities, some 90 in number, in response to a circular letter issued by the Department, have signified their desire to have extracts from the reports of the Inspector on those schools which they are aiding or controlling such extracts have been sent. Semi-official and official evidence indicates that there is generally a cordial co-operation between the officials of the bodies which are acting under the Technical Instruction Act and our Inspectors.

A new scheme for the conduct of Organised Science Schools has been framed. The principal changes from the old scheme being payment on inspection, the encouragement of Practical in connexion with Theoretical work, a modified capitation grant, and the requirement of some general education other than Science or Art. The new scheme will take effect next session, and from correspondence which has arisen with committees it appears that it will be adopted very largely by the schools working under the old scheme as well as by some new schools. The original scheme as shown in Circular 201 has been slightly modified in some details owing to representations made by those who are directly interested.

In the near future, grants to classes for instruction in Practical work in Physics and Biological subjects should be made. Until now it has been impracticable to make payments on these branches of practical Science. It was impossible to determine the efficiency of such instruction by examination. Inspection alone could determine it, but owing to the small number of Inspectors this could not be done. With the increased Inspectorate this difficulty has disappeared, and it would be a wise step to insist on practical work being taken with the theoretical instruction. The latter is incomplete without the former, and there is a danger of the knowledge imparted being cram and nothing more. In Ireland we have the worst examples of a mere book knowledge of science. The grants by the Science and Art Department are small compared with those paid by the Intermediate Education Board for the same subject. The Intermediate Board, I believe, have no power to insist on practical teaching in Science, their examinations being confined to papers in theory. The result is that insistence by the Science and Art Department on experimental teaching becomes almost a dead letter. It may be worthy of consideration whether in those subjects of Science in which the Intermediate Board examine, the Department's aid should only be granted on Practical work. As it is at present, there is a duplication of payments on results, for students are marked in the Science Registers whilst preparing for the intermediate examinations.

The various syllabuses have been under serious consideration for some time past. Many have already been revised and brought up to the latest requirements, whilst others remain to be considered. This year the syllabuses of Inorganic Chemistry, Geology, Mining and Physiography were placed in the hands of the examiners for revision. In Chemistry an endeavour has been made to render the theoretical teaching more objective. It has been recast and is better adapted to students to whom a knowledge of chemistry is requisite for the study of some other branch of Science. In Practical Chemistry in the Elementary Stage some very important modifications have been introduced, a knowledge of the methods of the preparation of different bodies and the setting up of apparatus being expressly required, and analysis being relegated to a later period, though quantitative work is insisted upon to some small degree. It is hoped that Theoretical and Practical Chemistry are now made much more interdependent than formerly. I have long felt that the Honours examination in this subject was a great deal too easy to be the honour, which it ought to be, to a candidate who passed, and with this in view this part of the syllabus has been entirely recast and a thorough examination, which will extend over three days, has been instituted. This will raise the status of the Honours to its proper level and cause it to rank equally with the Honours Stage of most other subjects.

In Geology the range of subjects was too wide. The syllabus if properly taught must have occupied a great deal more time than could possibly be expected to be given to it. The questions which could be, and were, asked were on such varied parts that the examination papers were a great difficulty to set and to answer. The subject has been a languishing one, and the students who come up for examination rather diminish than increase in numbers. The syllabus has now been entirely recast and simplified, and the Elementary part of Geology which is taught in Physiography is not repeated. This makes this last subject an elementary introduction to Geology, as it is hoped it will be, to various other subjects of Science.

The Mining syllabus has been recast into two divisions—coal and metalliferous-mining—in order to meet the wants of the coal-mining districts. I hear from various sources that this change has given great satisfaction in the localities where coal mining is an industry.

The syllabus in Physiography has been thoroughly revised. It has now been so framed that it is, particularly in the Elementary Stage, a real introduction to the various branches of Physical Science, and can be taught in this stage without Mathematics. In the old syllabus there was a too greatly marked division between terrestrial and celestial phenomena, and questions were equally divided between the two sections. This arbitrary division has been removed, and questions will be set on the whole syllabus of the stage. One object of this revision has been to adapt it for pupil-teachers who may be called upon to give object lessons in their future career. Object lessons without a

Appendix B.
Report by the Director for Science.

knowledge of the fundamental principles of Science must fall far short of what they should be, and are then worse than useless.

The question of how teachers are to be shown the best methods of teaching Science has been brought prominently forward on several occasions. In the summer courses to teachers we have now a valuable opportunity of giving instruction in such methods, and the Professors of the Royal College of Science have so framed the syllabuses of their courses that they will be useful demonstrations of the kind of way in which the different branches of Science may be most usefully taught. The object of the courses will be rather to show how the information which the teachers already possess may be best utilised in class teaching than to give them higher instruction. Higher instruction at these courses is not now so necessary as it was a few years ago, when teachers who were qualified to teach in some subjects came up to attend the course in some other subject in which they were not qualified. At the present time we insist that a teacher is ineligible to attend a course in a subject which he is not already technically qualified to teach. As the knowledge of the subject they possess is presumed to be sufficient, the summer courses can now be properly devoted to showing them how to teach it.

When the question of the revision of the Organised Science Schools was raised it became necessary to find out the average ages at which students in Science classes obtained successes in the Elementary and Advanced Stages. It was of course apparent that in Day Schools these ages would be very different from what they were in Evening classes. It was found that the average age in Day Schools for a student to obtain a 1st class elementary success was about 14 and for a 2nd class Advanced about 15¾, whilst in the evening class these ages were respectively about 18 and 21. These averages do not include Practical Chemistry, in which the ages are somewhat higher. These ages in the Advanced Stage are perhaps somewhat higher than they should be. The operations of the Organised Science Schools should lower them in Day Schools; and after a few years it will be interesting to notice what effect the new system of inspection as applied to them will have in effecting this.

In concluding this report I should be making an omission if I did not record the zeal with which all the staff of the divison has laboured. The amount of work is perpetually increasing, and the increase is in a considerably greater proportion than is that of the additions to the staff which have been made from time to time.

W. de W. Abney.

Total - - - -	—	16·45 *10·30*	78·48 *79·39*	5·06 *10·30*

* Geometrical Drawing, Passes 70·58, Failures 29·41; as against Passes *89·06*, Failures *10·93*, in 1893.

† Alternative Elementary Physics, Passes 68·96, Fair 27·58, Failures 3·45; as against *67·44* passes, *32·55* Failures, in 1893.

Appendix B.

General Statistics of Art Schools and Classes Examinations.

2. Results of Examinations in Art in 1893 and 1894.

Table A.—Giving General Statistics of Examinations in Art Schools and Classes.

——	1893.	1894.
Number of Schools under Teachers recognised by the Department - - - - - - -	1,812	1,746
Number of individuals under instruction in the same -	135,807	136,824
Number of the above who came up for examination -	73,728	75,932
Number examined in addition to the above who were not in Schools under Teachers recognised by the Department - - - - - - -	5,484	4,438
Number of individuals successful - - -	41,612	42,042
Number of those who have not been successful in a previous year - - - - - -	21,612	19,972
Number of papers worked in—		
Freehand Drawing, Subject 2*b* (Elementary Stage)	60,314	59,986
Do. Subject 3*b* (Advanced Stage) -	4,827	5,301
Model Drawing, Subject 3*a* (Elementary Stage) -	34,140	36,196
Do. Subject 5*a* (Advanced Stage) -	5,201	5,089
Drawing in Light and Shade, Subject 5*b* (Elementary Stage) - - - - - -	10,088	12,053
Drawing in Light and Shade, Subject 5*b* (Advanced Stage) - - - - - - -	4,865	5,381
Modelling, Subject 18*a* (Elementary Stage) -	2.863	3,508
Perspective, Subjects 1*c* and 1*e* (Elementary Stage)	9,948	7,973
Do. do. (Advanced Stage) -	237	226
Architecture, Subject 1*d* - - - - -	410	464
Principles of Ornament, Subject 22 (Elementary Stage) - - - - -	1,120	1,252
Principles of Ornament, Subject 22 (Advanced Stage) - - - - - -	371	414
Design, Subjects 23*c* and 23*d* (Elementary Stage)-	890	1,186
Do. do. (Advanced Stage) -	677	673
Do. do. (Honours) - -	197	247
Painting Ornament in Monochrome, Subject 11*a* -	1,048	1,256
Drawing from the Antique, Subject 8*b*² - -	1,081	1,307
Anatomy, Subject 9 - - - - -	406	483
Historic Ornament, Subject 22*d* - - -	144	195
Painting from Still Life, Subject 15 - -	1,173	1,280
Drawing from the Life, Subject 8*c*² - -	752	899
Drawing the Antique from Memory, Subject 8*f* -	181	196
Modelling. Design, Subjects 23*e* and 23*f* (Elementary Stage) - - - - -	190	261
Modelling. Design, Subjects 23*e* and 23*f* (Advanced Stage) - - - - -	125	281
Modelling. Design, Subjects 23*e* and 23*f* (Honours)	58	68
Modelling from the Antique, Subject 19*i* - -	140	322
Do. do. Life, Subject 19*h* - -	51	102
Architectural Design, Subject 23*b* - - -	84	68
Total number of Papers worked - -	141,581	146,967
Number of Provincial Centres where Examinations were held - - - - - -	1,578	1,567
Number of Metropolitan Centres where Examinations were held (including South Kensington Museum) -	140	151
Total number of Papers worked - - -	141,581	146,967
Total number of Successes - - - -	62,153	66,875
Total number of Failures - - - -	79,428	80,092

Appendix B.
—
SCHOOLS AND CLASSES AND NUMBER OF STUDENTS, &c.

LIST of SCHOOLS and CLASSES (Science and Art) showing the NUMBER of STUDENTS under INSTRUCTION, with the PRIZES obtained by each SCHOOL in the session 1893–94, the FEES received from the students, and the **GRANTS made by the** DEPARTMENT. Organised Science Schools are distinguished by being printed in black type.

***The amounts** appearing in Italics are payments to Science Classes on the results of the Examinations in Art subjects.*

Ind = Industrial Classes. M.C = Middle Classes (see Science and Art Directory, page 13.)

Where School numbers appear in italics with one asterisk it denotes that Schools have received Building grants from the Department either in respect of Science or Art premises. Where the italic numbers have a double asterisk Building grants have been made in respect both of Science and Art premises.

14. REPORT of the REGISTRAR of the NATIONAL ART TRAINING SCHOOL, South Kensington.

SIR,

I HAVE the honour to submit my report on the National Art Training School for the year ending 3rd October 1894.

In the period over which the report extends, viz., from October 1893 to October 1894, the number of Students in Training receiving instruction has been 37, of National Scholars 17, and pupil-teachers 3, one unpaid.

These, besides being free students, received weekly allowances of from 10*s.* to 43*s.* 6*d.* a week for the session of about 42 weeks.

During the year five Students in Training have been appointed to Masterships of Schools of Art, viz., R. Groves, to St. Albans; C. Georges, to Exmouth; J. Allison, assistant master, National Art Training School; J. H. Appleton, to Oldham, and Rosa Banks, assistant mistress, to Warrington.

Students in Training have given temporary assistance at the Art Schools at Tiverton, Kidderminster, Dumfries, Leamington, Lincoln, and Lowestoft.

Four Students in Training have given instruction in London district schools as a part of their training.

Three Students in Training, whose time has expired, have retired:—Edith M. Mason, Jane M. Twiss, and Jessie Harrison; and one, J. Shields, resigned.

Eight National Scholars, whose time has expired, have retired, viz.:—H. S. Pepper, W. M. Barnes, A. E. Bramley, E. A. Hopwood, W. M. Kean, T. R. Stokes, N. Vanderlyn, A. Wakeford; and one, E. W. Brookes, deceased.

Ten new candidates have been admitted as Students in Training, viz.:—J. J. Brownswood. N.A.T.S.; G. H. Lenfestey, N.A.T.S.; J. Ness, N.A.T.S.; C. H. Eva, Penzance; R. Andrews, Belfast; Gertrude H. Newton, N.A.T.S.; Julia Baker, N.A.T.S.; Janet Boothroyd, Southport; Lucy J. Pye, Chester; and J. Lattimer, Manchester.

Eight new candidates have been admitted as National Scholars, viz.:—W. J. Douglas, Belfast; A. H. Fisher, Lambeth; J. M. Glover, Dumfries; J. G. Hardy, Westminster; T. J. Overnell, People's Palace, Mile End; L. C. Radcliffe, N.A.T.S.; C. W. Walters, N.A.T.S.; and Eleanor Mercer, Sheffield.

Thirteen Local Scholars, 29 Royal Exhibitioners, 13 County Council Scholars, and three Local Exhibitioners, have also been admitted.

One hundred and ninety-four students have been permitted to attend the school without payment of fees, viz., 71 females and 123 males, consisting of:—

Students in Training - - - - -	37
National Scholars - - - - - -	17
Pupil-teachers (one unpaid) - - - -	3
Ex-students in Training, National Scholars, and others having passed higher grade examinations - -	124
Engineers - - - - - - -	13
Total - - -	194

Fourteen students fulfilling the requirements of paragraph 27, page 85, of the Art Directory have been admitted at half fees.

A total of 540 free, half-fee, and whole-fee-paying students have attended the school, viz.:—

	246 males.
	294 females.
Total	540

a decrease of 18 on last year.

Appendix B.

NATIONAL ART TRAINING SCHOOL.

The total amount of fees paid by students has been—

	£	s.	d.	
	1,531	16	0	from 233 day students
	144	1	0	,, 116 evening ,,
Total -	£1,675	17	0	

a decrease on last year of 204*l.* 15*s.* 11*d.*

The schools were open for study on 196 days, and the total number of attendances was 74,156; the average daily attendance being 378⅓; the smallest daily attendance being 185, on the 22nd December 1893; and the largest, 484, on the 6th March 1894.

The number of attendances, as compared with last year, shows an increase of 94; the average daily attendance remaining the same.

The following table shows the successes obtained by students of the School:—

Students.	Numbers of Successes.													
	In Department's Examinations.											In School Examinations.		
	National Competition Awards.				Advanced Examinations.				Elementary Examinations, including Stage 1 of Science Subject I.					
	Gold Medals.	Silver Medals.	Bronze Medals.	Book Prizes.	Queen's Prizes.	Excellent.	First Class.	Second Class.	Queen's Prizes.	First Class.	Second Class.	Silver Medals.	Book Prizes.	Other Prizes.
Free (receiving only honorary awards in respect of successes gained by them at the Examinations and in the National Competition).	3	18	54	90	16	48	177	191	—	—	—	11	12	4
Fee-paying	1	5	7	8	11	26	130	109	Nil.	87	47			
Totals	4	23	61	98	27	74	307	300	Nil.	87	47	11	12	4

The Certificates gained by Students of the School were:—

Art Master's Certificates.					Art Class Teacher's Certificates.	Elementary Drawing Certificates.	Total.
Group I.	Group II.	Group III.	Group IV.	Group VI.			
[illegible]	15	3	2	[illegible]	9	4	51

Three Travelling Scholarships were awarded:—

1st, to [illegible], with a Gold Medal;
2nd, to George [illegible], with a Silver Medal;
3rd, to William B. Dalton, with a Bronze Medal.

Twenty lectures on Decorative Art have been delivered during the year in the Public Lecture Theatre, South Kensington Museum, by Lewis F. Day, Esq., at which 1,687 attendances were registered, or an average of 84 per lecture.

Appendix B.

NATIONAL ART TRAINING SCHOOL.

A. Thomson, Esq., M.A., M.B., has given a course of 22 lectures on Anatomy in the same place and during the same period, and the attendances of the students have been 1,849, an average attendance of 84 per lecture.

I have the honour to remain, Sir,
Your obedient servant,
SUSSEX W. LENNOX, Lieut.-Gen.,
Registrar.

To the Principal,
National Art Training School,
18th December 1894.

Total number of individual students	294
Of which—Government students	158
Private students paying fees	136

The amount received for fees during the session was 3,501*l.* 7*s.* 0*d.*

Number of Science teachers who received instruction from the 3rd to the 25th July 1894 in—

	Number who attended.
Agriculture and Agricultural Chemistry	25
Astronomical Physics	48
Chemistry	37
Electricity	42
Mechanics	36
Mining	21
Physiology	34
Total	243

Three courses of lectures to working men were delivered by the Lecturer on Mineralogy, Assistant Professor of Botany, and the Professor of Chemistry, as follows:—

		Number who attended.
1st Course.	"Minerals used for cutting, grinding, polishing, and the fabrication of tools" - -	255
2nd Course.	"Plant structure considered in relation to the environment" - - - -	177
3rd Course.	"Forms of gas" - - - -	298

DIVISION I.—MECHANICS AND MATHEMATICS.

Mechanics and Machine Drawing.—The courses of lectures and class instruction in Mechanics and Machine Drawing, Part I., extending from October 1893 to February 1894, were attended by 52 students.

Forty-eight entered for the final examination, of whom 15 passed in the first class, and 22 in the second class.

Eight students took up Mechanics, Part II., and at the examination in February 1894, two passed in the first class, and five in the second class. There were also eight students in Mechanics, Part III., and at the final examination in June 1894, five passed in the first class and two in the second class.

The summer course to Science teachers consisted of lectures and class instruction in Mechanics. It was attended by 36 students, and on the results of examinations 24 of these were placed in the first class, and 11 in the second class.

The instruction in Descriptive Geometry, given on Saturday mornings throughout the session, was attended by 59 students, of whom 51 entered for the sessional examination in June 1894; of these 29 passed in the first class, and 19 in the second class.

The following additions have been made to the appliances for teaching Mechanics since the date of the last report:—Apparatus for determining the efficiency of a screw-jack, and of a wheel and axle; apparatus illustrating the torsion of a shaft, and for showing the relation of friction to velocity in the case of a shaft rotating rapidly; an instrument for measuring the effects of centrifugal force at different rates of rotation, and a well-made example of an Atwood's machine.

Mathematics.—During the session 130 students attended the mathematical classes, and at the examinations 78 qualified in Class A., 70 in Class B., 23 in Class C., 17 in Class D., and 5 in Class E.

DIVISION II.—PHYSICS.—PROFESSOR RÜCKER, F.R.S.

The courses on Physics were attended by 10 students during the first term and 90 during the second term.

Course I.—The first year course was attended by 81 students. Seventy-eight entered for the final examination, of whom 20 were placed in the first class and 45 in the second class.

Course II.—Four students presented themselves for examination, of whom two passed in the first class and two in the second.

Summer Course.—Forty-two Science teachers attended the summer course of lectures on Electricity, which was delivered by Professor Rücker.

The assistants in the Physical Laboratory during the last session were Messrs. W. Williams, E. Edser, H. Stansfield, G. R. Melton, and S. G. Starling.

Research.—The work of the Magnetic Survey was completed and communicated to the Royal Society in June 1894.

Mr. Boys also completed and communicated to the Royal Society his work on the Constant of Gravitation.

The investigations undertaken by Messrs. Watson and Rodger, Edser and Stansfield, have all made progress, and the first is about to be published.

The following papers were completed during the year:—

1. On the Magnetic Shielding of Concentric Spherical Shells, by A. W. Rücker. Phil. Mag., Jan. 1894.
2. On a Magnetic Survey of the United Kingdom for the epoch Jan. 1, 1891, by A. W. Rücker, and T. E. Thorpe.
3. On the attachment of Quartz Fibres by C. V. Boys. Phil. Mag., May, 1894.
4. On the Newtonian Constant of Gravitation by C. V. Boys.

The second and fourth are in the hands of the Royal Society, but have not yet been published.

ASTRONOMICAL PHYSICS.—PROFESSOR LOCKYER, C.B., F.R.S.

The course of evening demonstrations extended from October 1893 to the end of May 1894, and the course of lectures and laboratory work from June 14th to June 30th, 1894.

The number of students in regular attendance was 75; of these 23 were National scholars, 12 were Royal exhibitioners, Local exhibitioners, and free students, 11 were teachers in training, and the remainder were associate students paying fees. 70 of these presented themselves for examination, and in addition 4 students, who attended the lectures only, were re-examined. 26 were placed in the first class, 38 in the second, and 10 failed to pass. The prize of books, value 3*l*., was divided between F. R. Penn and R. Sowter.

Owing to the large number of students and the limited accommodation of the Observatory, it was necessary to arrange the students in four classes, each student thus attending the Observatory once in two weeks for eight months.

The course of evening work was very similar to that of last year, consisting of instruction in the use of the Nautical Almanac, transit instrument and chronograph, equatorial, micrometer, altazimuth, and stellar spectroscopes. The use of artificial stars was continued for transit observations, and for micrometric measures of double stars. Photographs of stellar spectra were also taken by the students.

The weather was very unfavourable, but the work done was satisfactory.

The 3-foot speculum, which has been kindly presented by Dr. A. A. Common, F.R.S., was available for the use of the students.

During the June course many of the students studied the changes in the telescopic appearances of sun-spots from day to day. Solar prominences were also shown to them, and as an exercise in the manipulation of the telescope, the planet Venus was frequently observed in full daylight.

The laboratory work was the same as in former years, consisting of the construction of a telescope, orbit and sextant models, and instruction in the uses of the sextant, theodolite, magnetic instruments, celestial and terrestrial globes, spectrum analysis, and spectrum photography.

The usual class lists and time-tables were supplied to the students to prevent confusion.

The time-table was as follows:—

Appendix C.

ROYAL COLLEGE OF SCIENCE, LONDON.

ASTRONOMICAL PHYSICS.

DEMONSTRATIONS, JUNE 1894.

TIME TABLE OF CLASSES.

Class.	Thursday, 14th June. Friday, 15th June.	Saturday, 16th. Monday, 18th. Tuesday, 19th (morn.).	Tuesday, 19th (after.). Wednesday, 20th. Thursday, 21st.	Friday, 22nd. Saturday, 23rd. Appendix C.
—
ROYAL
COLLEGE OF
SCIENCE,
LONDON.

The thanks of the Professor are due to the following gentlemen, who acted as assistant demonstrators under the direction of Mr. Fowler :—

Mr. A. Nicholls -	-	
,, W. E. Tubbs	-	
,, W. Whalley	-	
,, B. Jordan-Smith	-	
,, W. Saunders	-	
,, A. More -	-	
,, C. P. Butler	-	Teaching scholar in Astronomical Physics.
,, H. G. Wardale	-	Teacher in training.

Summer Course to Science Teachers.—Forty-eight teachers attended the summer course in Astronomical Physics, extending from July 3rd to July 25th, 1891. The course of instruction covered the same ground as that for the regular students, but as more time was available, some of the work was extended.

As the Mining Laboratory was not available, as in the last course, to teachers, a considerable amount of the instruction was necessarily given in the Western Galleries, at a considerable distance from the astronomical instruments. This arrangement caused great inconvenience and loss of time.

Several evenings were devoted to the various instruments, the use of which had been taught during the day.

The time table was as follows :—

ASTRONOMICAL PHYSICS.

Demonstrations, July 1894.

Time-Table of Classes.

Class,	Tuesday (morn.), 3rd July.	Tuesday, 3rd July (after.). Wednesday 4th, Thursday, 5th (morn.).	Thursday, 5th July (after.). Friday, 6th, Saturday, 7th.	Monday, 9th July. Tuesday, 10th.	Wednesday, 11th July. Thursday, 12th,	Friday, 13th July. Saturday, 14th, Monday, 16th (morn.).	Monday, 16th July (after.). Tuesday, 17th, Wednesday, 18th.	Wednesday, 18th July (after.) Thursday, 19th, Friday, 20th (morn.).	Friday, 20th July (after.). Saturday, 21st, Monday, 23rd.	Tuesday, 24th July. Wednesday, 25th.

Spectrum observations -	Geological Laboratory in Western Galleries.
Spectrum photography -	(*a*) Astronomical Research Laboratory. (*b*) Observatory.

Appendix C.

Royal College of Science, London.

All the teachers manifested great interest in the work, and made use of every opportunity of making themselves familiar with the practical applications of the various instruments.

There was no examination at the end of the course, but a list of the names of the teachers, arranged in order according to the number of marks earned in the practical work, was sent in to the Registrar for future reference.

For the summer course to Science Teachers, Messrs. Nicholls, Tubbs, Smith, Saunders, Whalley and Butler were retained, the scattered positions of the laboratories making a considerable number of assistants necessary.

Messrs. Butler and Wardale were appointed teachers in training in Astronomical Physics in October 1893, and continued as such until June 1894. They assisted in the evening demonstrations through the winter.

Research Work.—Some of the results of the various investigations in hand are included in the following list of papers communicated to the Royal Society by the Professor:—

On the Photographic Arc Spectrum of Electrolytic Iron. October 27, 1893.

On the Photographic Arc Spectrum of Iron Meteorites. December 22, 1893.

Preliminary Note on the results obtained with the prismatic cameras during the Total Eclipse of the Sun, April 16th 1893. February 22nd, 1894.

On the spectrum changes in β Lyræ. June 13th, 1894.

On the photographic spectrum of the Greet Nebulæ in Orion. June 13th, 1894.

DIVISION III.—CHEMISTRY.—PROFESSOR TILDEN, F.R.S.

The instruction in this division consisted of:—

(1.) A course of 70 lectures on inorganic chemistry and on the principles of chemical philosophy, extending from the beginning of October to the middle of February, delivered by Professor Thorpe, F.R.S.

(2.) A course of 65 lectures on organic chemistry, extending from the middle of February to the beginning of June, delivered by the Assistant Professor, Dr. W. Palmer Wynne.

(3.) A course of 16 lectures on the theory of qualitative inorganic analysis, during the first term, delivered by Mr. A. E. Tutton.

(4.) A course of 15 lectures on physical chemistry, dealing with the New Theory of Solutions, during the second term, delivered by Mr. J. W. Rodger.

(5.) A course of 12 lectures on the theory of qualitative organic analysis, during the first term, delivered by Mr. W. Tate.

A course of lectures on the "Constitutional Formulæ" was given to a class of 63 science teachers during July by the Assistant-Professor. The Lecture Assistant, Mr. G. S. Newth, also gave a series of demonstrations to science teachers on the methods of illustrating the elementary facts of chemistry in class instruction.

The number of students receiving chemical instruction, excluding the science teachers who came up for the summer courses, during the session was 114. The temporary arrangement by which the east chemical laboratory was occupied by advanced students of both the north and south chemical laboratories was continued during this session. Much inconvenience was caused during the winter term by the defective ventilation of the laboratories.

The conduct and diligence of the students in the various classes have been satisfactory.

In the month of February, Professor Thorpe resigned the chair of chemistry on his appointment as Principal Chemist of the government laboratories, and Professor Tilden succeeded him on July 1. In the interval between Professor Thorpe's departure and July 1st, the division was in charge of the Assistant-Professor.

Research Laboratory.—Mr. L. M. Jones, B.Sc., completed an investigation on the physical properties of the isomeric dipropargyls.

Mr. D. H. Jackson, B.Sc., 1851, exhibitioner from the University of New Zealand, investigated the properties of tne dyestuff "Canarin."

Mr. R. E. [illegible] prepared certain of the lower fatty mixed ethers and determined their viscosity.

Mr. G. D. Lander, B.Sc., examined the isomeric acids formed on sulphonating parachloro and parabromo-toluene.

Mr. J. Bruce commenced an investigation of the acids formed on sulphonating the isomeric toluidine-sulphonic acids.

The following papers were published during the session:—

Bakerian Lecture. On the Relations between the Viscosity (Internal Friction) of Liquids and their Chemical Nature. By T. E. Thorpe, D.Sc., F.R.S., and J. W. Rodger, Assoc. R.C.S. Phil. Trans. Vol. 185. 1894. A., p. 397.

On the Viscosity of Water as determined by Mr. J. B. Hannay by means of his Microrheometer. By Robert E. Barnett, Assoc. R.C.S. Communicated by T. E. Thorpe, D.Sc., F.R.S. Proc. Roy. Soc. Vol. 56. 1894.

A specimen of Early Scottish Iron. By Margaret D. Dougal. Journ. Chem. Soc. Trans., 1894. p. 744.

The Mineral Waters of Cheltenham. By T. E. Thorpe, D.Sc., F.R.S. Journ. Chem. Soc. Trans., 1894. p. 772.

The supposed Relation between the Solubility of a Gas, and the Viscosity of its Solvent. By T. E. Thorpe, D.Sc., F.R.S., and J. W. Rodger, Assoc. R.C.S. Journ. Chem. Soc. Trans., 1894. p. 782.

On the Product of the action of Mercuric chloride upon Metallic Silver. By Chapman Jones. Journal Soc. of Chem. Industry. XII., 983.

Some Recent Advances in Photographic Chemistry. By Chapman Jones. Journal Society of Arts, XLII., 472. For this paper the author was awarded the silver medal of the Society.

An instrument for grinding section-plates and prisms of crystals of artificial preparations accurately in the desired directions. By A. E. Tutton. Phil. Trans., 1894, Series A. Read Feb. 1st, 1894.

An instrument of precision for producing monochromatic light of any desired wave-length, and its use in the investigation of the optical properties of crystals. By A. E. Tutton. Phil. Trans., 1894, Series A. Also read Feb. 1st, 1894.

Connection between the Atomic Weight of contained metals, and the crystallographical characters of isomorphous salts. A comparative study of the normal sulphates of potassium, rubidium, and cæsium. By A. E. Tutton. Journ. Chem. Soc. Trans., 1894, 628–717, and Zeitschrift für Krystallographie. Vol. 24, 1.

Analytical Laboratories.—The South Chemical Laboratory was under the charge of the Assistant Professor, Dr. W. Palmer Wynne, who was assisted by Mr. W. Tate and Mr. H. Grime.

During the first term the laboratory was attended by 62 students, of whom 53 passed through the prescribed course of instruction in qualitative and quantitative analysis; six were engaged in qualitative analysis only, and three in research work.

During the second term there were 17 students in the laboratory: five of whom went through a preparatory course of instruction consisting of simple quantitative exercises dealing with the laws of chemical combination, the phenomena of combustion, &c.; three members of this class also worked through the elementary portions of the ordinary analytical course; 10 students were engaged in quantitative analysis and two in research work.

The quantitative course included mineral analysis, gas and water analysis, determination of chemical equivalents, determination of molecular weights from measurements of vapour density and the freezing-point of solutions, determination of melting point and boiling point, analysis by electrolysis, and the preparation of pure substances.

The short course in July was attended by 38 students, of whom 21 were engaged in qualitative inorganic analysis, one in qualitative inorganic and qualitative organic analysis, and 16 in qualitative and quantitative analysis.

Demonstrations were given during the course on the methods of qualitative inorganic analysis.

The North Chemical Laboratory was under the charge of Mr. Chapman Jones, who was assisted by Mr. A. E. Tutton and Mr. W. Kirman.

During the winter term the laboratory was attended by 44 students, 42 of whom devoted a part of their time to quantitative work.

Appendix C.
Royal College of Science, London.

During the summer term 15 students worked in this laboratory, 14 o whom were engaged in quantitative work.

The students of agriculture worked upon soils, manures, feeding stuffs, agricultural products, &c., and the others upon minerals, alloys, natural waters, gases, the determination of vapour densities, organic analysis, spectrum analysis, preparations, &c.

During the summer term practical instruction in photographic methods was given to a select number of students on one afternoon in each week by Mr Chapman Jones. Some of the applicants were unable to take this course because of the limited accommodation.

The course of agricultural chemistry in July was attended by 25 students, four of whom did quantitative work.

DIVISION IV.—BIOLOGY.—ZOOLOGY.—ASSISTANT PROFESSOR, G. B. HOWES.

The course in Elementary Animal Biology commenced on October 4th, and ended on December 21st. 57 lectures were delivered by the Assistant Professor. The 15 students in attendance all sat for examination, and of these five were placed in the first class and two failed.

The advanced course commenced on October 4th, and ended on June 22nd. 60 lectures were delivered by the Assistant Professor. Of the eight students in attendance, four presented themselves for examination; one was incapacitated during the examination from ill-health, and of the three who remained two were placed in the first class. One of the latter (Mr. G. S. West.) was at the end of the Session awarded the Forbes Medal and Prize of Books

A free place in the Huxley Laboratory was granted Mr. H. M. Bernard, M.A., late Marshall Scholar, for the continuation of his enquiry into the Morphology of the Solpugidæ; and Mr. J. E. S. Moore, to whom a free place was granted during the Session 1892-1893, obtained the grant of the British Association Table at the Naples Zoological Station for the continuation of his work on Spermatogenesis.

Mr. J. Harrison, formerly a student in the division, was, during the Session, appointed Instructor in Biology at the Battersea Polytechnic.

The following papers were published during the Session in connexion with work done and being carried on in the division.

Howes, G. B.:—
- "On the Variation in the Respiratory Apparatus of the Marsipobranchii." P. Z. S., 1893.
- "On Synostosis and Curvature of the Spine in Fishes, with especial reference to the Sole." P. Z. S., 1894.

Woodward, M. F.:—
- "On the Development of the Teeth of the Macropodidæ." P. Z. S., 1893.
- "On the Anatomy of Ephippodonta Macdougallii." Proc. Malac. Soc. Vol. I.

Moore, J. E. S.:—
- "Some points in the Spermatogenesis of Mammals." Month. Internat. Jour. of Anat. and Hist. Vol. XI.
- "On the Germinal Blastema and the Nature of the so-called "Reduction-Division" in Cartilaginous Fishes." Anat. Anzeiger, Bd. IX.

Bernard, H. M.:—
- "Notes on the Chernetidæ." Jour. Linn. Soc. Zool. Vol. XXIV.
- "The Stigmata of the Arachnida, as a clue to their Ancestry. Nature, Vol. 49.
- "The Endosternite of Scorpio, compared with the Homologous Structures in other Arachnids. Ann. and Mag. Nat. Hist. Vol. XIII.
- "Lateral Eyes in the Galeodidæ." *Ibid.* Vol. XIII.
- "The Systematic Position of the Trilobites. Qu. Jour. Geol Soc., Aug. 1894.
- "On the Relations of the Isotropous to the Anisotropous Layers in Striped Muscles." Spengel's Zoolog. Jahrb. Anat. Abth., Bd. VII.

Sumner, J. C.:—
- "Description of a new species of Nemertine." Ann. and Mag. Nat. Hist Vol. XIV.

Harrison, J.:—

"On the Urinogenital and Blood-Vascular System of a Rabbit possessed of a single kidney. Jour. Anat. and Phys. Vol. XXVII.

During July a summer course in Animal Physiology was conducted by the Assistant Professor, assisted by the Demonstrator and Mr. G. S. West Forbes Medallist of the Session. 18 lectures were delivered by the AssistantProfesssor and 34 teachers were in attendance.

Gifts of valuable material for the teaching collection are acknowledged with thanks from Professors W. Baldwin Spencer of Melbourne, W. A. Haswell of Sydney, and C. Stewart of the Royal College of Surgeons, London; as also from Mr. H. M. Bernard, late Marshall scholar, and Messrs. J. P. Hill, W. L. S. Loat, and W. C. Worsdell, students in the College. By purchase there have been acquired a male Lepidosiren, collected by Dr. Bohls in the Rio Paraguay, and a replica of a Macromirosaurian skeleton in the Frankfurt Museum, recently described by Mr. G. A. Boulenger, F.R.S.

DIVISION IV. BIOLOGY—BOTANY.—ASSISTANT PROFESSOR, J. B. FARMER.

The course in Elementary Botany was attended by 19 students, 16 of whom were examined. Six of them were placed in the first class. 30 lectures were given by the Assistant Professor.

It is a matter for regret that the time allotted to the teaching of Elementary Botany should be so brief; a period of six weeks being totally inadequate for a satisfactory treatment of the subject.

The advanced class (commencing October 4th, 1892) was attended regularly by two teachers in training, and, occasionally, by two private students.

Class demonstrations were given in this course, and a special series of advanced lectures, by the Assistant Professor, was attended by eight students.

Several botanical excursions were undertaken during the year.

Mr. Jesse Reeves (Marshall scholar) and Mr. W. C. Worsdell were engaged on original research.

The following papers have been published during the year:—

J. B. Farmer:—

"On the Relations of the Nucleus to Spore-formation in certain Liverworts." Proc. Roy. Soc., Vol. 54.

"On nuclear division in the Pollen-mother-cells of *Lilium Martagon*." Annals of Botany, Vol. VII.

"On *Pallavinia decipiens* Mitt.", *Ibid.*, Vol. VIII.

J. B. Farmer and Jesse Reeves:—

"On the occurrence of centrospheres in *Pellia epiphylla*. *Ibid.*, Vol. VIII.

Jesse Reeves:—

"On the development of the stem and leaves of *Physiotium giganteum Webr*. Journ. of Bot., 1893.

J. C. L. Williams:—

"The sieve-tubes of *Calycanthus occidentalis*." Annals of Botany, Vol. VIII.

L. A. Boodle and W. C. Worsdell:—

"On the comparative anatomy of the Casuarineæ, with special reference to the Gnetaceæ and Cupuliferæ." *Ibid.*, Vol. VIII.

A course of six lectures on "The relations of plant-structure to the environment" was given by the Assistant Professor to working men.

Many additions have been made to the teaching collections during the year, and thanks are especially due to the Director of the Royal Gardens, Kew, to Professors Balfour, Vines, Goebel, and Oliver, for donations of valuable specimens.

DIVISION V.—GEOLOGY.—PROFESSOR JUDD, F.R.S.

The courses of instruction in Geology and Mineralogy were attended, during the first term of the session 1893–94, by six students, who were instructed in Part II. (Advanced Geology including Geological Surveying, Mineralogy and Petrology); while, on two days of the week, 34 students from the Mining and Metallurgical divisions received special training in Determinative Mineralogy. This course of instruction consisted of (1), a series of lectures by Mr. Rutley on the ores of the useful metals and their association with other minerals; and (2) practical instruction in the laboratories by the Demonstrators and Assistants, on the discrimination of minerals by the aid of blowpipe and other tests.

Of the students attending the Advanced Course, six presented themselves for examination, two taking the Special Honours examination also—one in Palæontology and the other in Petrology. The examination (practical) in Determinative Mineralogy was attended by 33 students, and the results were, on the whole, very satisfactory. One fact, however, is very clearly demonstrated by the results of this examination—namely, that it is quite useless for the students to take up the courses of mining or metallurgy, unless they have already received, in this or some other school, a thorough training in Elementary Chemistry and Mineralogy.

The elementary classes during the second term of the session, were attended by 68 students. The use of a second room as a laboratory afforded great relief, and enabled the teaching to be carried on in a much more satisfactory manner than heretofore. Of the students attending the elementary course, 57 presented themselves for examination, 23 obtaining a first class, 28 a second class, while 6 failed. One student of the previous year was re-examined and obtained a second class certificate. The Murchison prize of books for the year was divided between Mr. J. J. Green and Mr. F. C. Harrison, but no student exhibited such exceptional excellence as to justify the award of the Murchison medal.

Of the four students who attended Part III., including Systematic Palæontology and Stratigraphical Geology, as well as Part II. in the previous term, all passed the final examinations—one in the first class and three in the second class.

At the end of the session, Mr. A. M. Davies, B.Sc., resigned his post as Demonstrator, and his place was filled up by the promotion of Dr. W. F. Hume; Mr. C. G. Cullis succeeded Dr. Hume, while Mr. T. Barron, who had served for a year as a student assistant, took the place of Mr. Cullis as Assistant Demonstrator.

Research.—The want of a proper research laboratory, in which chemical and other operations may be safely conducted, has been severely felt by the Geological Division in its present temporary quarters. In spite of the difficulty, however, a certain amount of research work has been carried on, when the exigencies of the teaching-work permitted of its being taken up.

The Senior Demonstrator, Mr. A. M. Davies, B.Sc., undertook an investigation of the minute structure of the Trilobite crust, as compared with that of the Arthropods; an essay on the subject was presented as his thesis for the Doctor's degree at the London University, but has not yet been published.

The two essays prepared by the candidates for Honours, entailed careful researches in the case of Mr. E. H. L. Schwarz on the microscopic characters of the shell of the *Ammonoidea*, and in the case of Mr. T. Barron on the characters of some metamorphic limestones from Scotland. These essays both showed very marked ability. Portions of the investigations carried on by Mr. Schwarz—one of the student-assistants—in the schools are embodied in the following published papers.

The Aptychus. Geol. Mag., Dec. IV., Vol. I., p. 454.

Coccoliths. Ann. and Mag. Nat. Hist., Ser. 6. Vol. XIV., p. 341.

The Assistant, Mr. F. Chapman, has continued his studies of the Foraminifera of the Gault of Folkestone, noticed in the last report, and further instalments of the work have been published in the Microscopical Society's Journal.

The Professor has published the results of some of his researches on Scottish rocks in the following memoir:—

"On Composite dykes in Arran." Quarterly Journal of the Geological Society, Vol. XLIX. (1893), p. 536.

Other papers on the rocks and minerals of Burma, which have been studied at the request of the Secretary of State for India, will shortly be published.

Great services have been rendered to the Geological Division of the school by the presentation to it of series of specimens for teaching purposes. The Professor has especially to acknowledge the liberality of the Trustees of the British Museum, who have supplied him with a valuable series of specimens of Cephalopoda, and some interesting minerals; to Professor H. A. Nicholson, of the Aberdeen University, and to many former pupils, among whom may be mentioned Mr. T. H. Holland of the Geological Survey of India, Mr. R. D. Oldham of the same survey, Dr. J. W. Evans in the service of the Mysore Government, G. W. Card, Curator of the Museum of the Geological Survey of New South Wales, Mr. J. Lucas of Arequipa, Peru, and others.

Division VI.—Principles of Agriculture.—Professor Wrightson.

The agricultural winter course consisted of 30 lectures, supplemented by laboratory instruction. The summer course of lectures was attended by 25 students, and the winter course by three. During the summer course this class visited Rothamsted Park, Herts., where they were kindly received and hospitably entertained by Sir John Lawes, and Sir Henry Gilbert. The visit was of an extremely interesting nature, as Dr. Sir Henry Gilbert explained his views upon the assimilation of free nitrogen from the atmosphere through the agency of micro-organisms.

The lectures during the winter were chiefly upon soils, manures, rotations of crops, crop cultivation, and animal nutrition.

In the summer course special attention was given to the composition and properties of soils and the relations of geology to their distribution.

Their is nothing specially to report upon this Session. The Professor has published a volume upon "Sheep and their management," and is engaged in bringing out a 3rd edition of his Agricultural Text-book.

Division VII.—Metallurgy.—Professor W. C. Roberts-Austen, C.B., F.R.S.

The Metallurgical course was attended in the first term by 41 students, and in the second by 17, a total of 58. The number of individual students was 42.

The class was conducted in its annual excursion by Mr. Jenkins, and visited 12 works. These included copper, zinc, iron, and tinplate works in the neighbourhood of Swansea, and lead works near Chester.

Increased attention has been given, during the past Session, to conducting practical metallurgical operations, and in this connexion it is pointed out that additional space for the creation of a practical testing laboratory is much needed.

At the final examination held in June, 12 students presented themselves for examination, of whom four were placed in the first class, and three failed to satisfy the examiners. Mr. C. H. Sidebotham was awarded the Bessemer Medal, and prize of books.

Mr. A Gibb, who presented himself for the Honours examination in metallurgy, submitted a thesis on the "Elimination of Impurity from Copper during Smelting." This thesis contained some excellent experimental work, and Mr. Gibb subsequently received the Honours diploma of the College.

The Instructor in Assaying, Dr. Ball, resigned his post towards the end of the first Term, having received an appointment as Inspector of Schools and Classes under the Department of Science and Art, and the Professor records his high sense of the value of Dr. Ball's services while he held his appointment in the College. The vacancy caused by his resignation was filled by the appointment of Mr. H. C. Jenkins, Whitworth Scholar and Bessemer Medallist, who, as Lecture Assistant, had already given evidence of his qualifications for the office. Mr. Stansfield was appointed to fill the post rendered vacant by Mr. Jenkins' promotion.

Owing to these changes, the year has not been a favourable one for research. Some important analytical work for the Department of Science and Art was carried on by Mr. A. Gibb. The researches of the Professor upon the Diffusion of Metals have been continued, and have led to some interesting results, which will be shortly communicated to the Royal Society. An investigation has been made by Mr. H. C. Jenkins with a view to ascertain what reactions take place in the metallurgy of lead, and the results will shortly be published. Mr. Smith contributed a paper to the Chemical Society, entitled "Notes on the Cupellation of Bismuth-Silver Alloys."

The collections in the laboratory have been enriched by several contributions of ores and specimens, and more especially by the elaborate series of alloys employed by the late Dr. Alder Wright, F.R.S., in his later researches.

Division VIII.—Mining.—Professor C. Le Neve Foster, F.R.S.

The course of instruction, which was attended by 30 students, included 61 lectures on General Mining delivered by the Professor, and 22 lectures on the Preparation of Minerals for the Market and on Mine Accounts by Mr. Lawn.

Five lectures and demonstrations on First Aid to the Injured, given by Dr. Garson in accordance with the regulations of the St. John Ambulance Association, were attended by 35 students; 30 presented themselves for examination and 27 passed.

Mine Surveying.—Twenty-seven students attended this course. Thirty lectures were given; and practical instruction in the use of the instruments, and in the various methods of surveying and levelling, was carried on at South Kensington, Hampstead Heath, and in the underground workings of a stone mine near Godstone. The use of the Tacheometer formed a new feature in the course. Mr. S. W. Price acted as assistant to Mr. Lawn.

Each student had two or three days' practice with the small boring plant belonging to the College; and instruction was given in rope-splicing, in vanning, and in testing for fire-damp with the ordinary safety-lamp and Clowes' hydrogen lamp.

Excursions.—Although the Professor had made complete arrangements for a visit to certain iron mines in Luxemburg and some collieries in Belgium, so many of the students found it difficult or impossible to go, that the official excursion was dropped.

Almost all the students spent their summer vacation either in actual work in mines or in visiting mining districts at home and abroad. At the end of the Session, examinations were held in General Mining and in Mine Surveying; 18 candidates, out of 27, passed in the former subject, and 20 out of 26 in the latter. The certificate for "Mining" is not given unless the candidate has shown proficiency in Assaying and Determinative Mineralogy. Taking these subjects into account, five students passed out in "Mining" in the first class and 12 in the second class. A summer course, attended by 21 teachers, was conducted by Mr. Lawn, who delivered 17 lectures on the Preparation of Minerals for the Market, and gave practical instruction in Mine Surveying and in testing for fire-damp.

During the summer vacation of 1893, the Professor visited the Chicago Exhibition as a member of the British Royal Commission, and acted as a Judge in the Mining section. He read a paper at the Chicago Congress upon Mineral Statistics, which is published in the Transactions of the American Institute of Mining Engineers.

As a member of the Departmental Committee upon Open Quarries, he visited with his colleagues various important quarries in England, Wales and Scotland; and the result of the inquiry was the passing of the Quarries Act, which comes into force on the 1st January 1895.

In obedience to instructions from the Secretary of State for the Home Department, he acted as Chairman of two other Departmental Committees one of which enquired into the collection and publication of the Mineral Statistics of the United Kingdom, and the other into the dangers of life and limb of the Merionethshire Slate Mines.

In June last he published "A text-book of Ore and Stone Mining," a lengthy treatise upon certain branches of his subject.

The teaching collection continues to grow. Special thanks are due to The Rio Tinto Company, who presented two large oil paintings and a water-colour drawing showing parts of the great open-work and the port of Huelva, where the ore is shipped.

Another valuable addition is a series of 17 large wall diagrams illustrating appliances used in dressing ores, kindly given by Mr. R. E. Commans.

T. H. Huxley.

APPENDIX D.

Appendix D.
SOUTH KENSINGTON MUSEUM RETURNS.

SOUTH KENSINGTON MUSEUM.

ART MUSEUM RETURNS including the INDIAN SECTION.

(1.) LIST of CONTRIBUTORS of LOANS to the ART MUSEUM, 1894.

Allen, Mrs. A. An English brass lock and key.
Armstrong, T., Esq. A flounce of old Venetian rose point lace.
Boyce, G. P., Esq. Two water-colour paintings, "Edward the Confessor's Tomb," and "The Precincts of Bridewell," by the lender.
Clarke, Mrs. Two carved wood communion cups and six specimens of old Brussels tapestry.
Clarke, Mrs. Stanley. A stone boss from a groined ceiling, carved with the subject of "The Flagellation."
Collie, A. L., Esq. A Limoges enamelled shrine.
Coltart, W., Esq. An oil painting, "The Gander," by G. H. Mason, A.R.A.
Currie, D. M., Esq. A collection of armour, works of art in maiolica and bronze and some illuminated books.
Dixon, Mrs. An oil painting of the Queen of Bohemia, by Honthorst.
Dunn-Gardner, J., Esq. An ivory snuff-box.
Evans, Mrs. J. A Persian carpet.
Fitzhenry, J. H., Esq. A collection of miscellaneous objects.
Gurney, J., Esq. A collection of steel objects, locks, keys, knives, &c.
Hamilton, Surgeon-Colonel J. B. An Indian sword and four Chinese dishes.
Hardy, D., Esq. An oil painting, "Homeless," by the lender.
Hayne, R., Esq. An enamelled gold ring of English workmanship.
Hedges, K., Esq., M.I.C.E. A Japanese lacquer box.
Heredia, A., Esq. A large triptych painted with scenes in the life of St. James the Greater.
Hollond, J. R., Esq. A bronze statue of the Apollino.
I'Anson, E. B., Esq. A design by Albert Moore for the decoration of the end wall of the Dutch Church in Austin Friars.
Leighton, Sir F., P.R.A. An old Brussels tapestry.
Lucas, J. S., Esq., A.R.A., F.S.A. A collection of arms and armour.
Massey-Mainwaring, The Hon. W. F. B. A group of Dresden porcelain and three Oriental bronze incense burners.
Montagu, Sir S., Bart., M.P. A collection of old English silver plate.
Myers, Captain W. J. A collection of miscellaneous Oriental works of Art.
Nevill, Lady D. Four iron fire-backs.
Pell, A. D., Esq. An engraved Manchurian vase.
Robbins, Surgeon-Major H. J. A collection of Oriental porcelain.
Salting, G., Esq. Additions to his collection of Oriental porcelain, Italian maiolica, &c.
Singer, Messrs. J. W. and Sons. A rosewater dish.
Smith, R. G., Esq. A large native Indian water-colour painting.
Stapleton-Cotton, Colonel the Hon. R. An Indian silver casket.
Taylor, J. E., Esq. Two Limoges enamelled book covers and a shrine.
Trendell, H., Esq. A gold knife of French workmanship.
Verulam, The Right Hon. the Earl of, F.R.G.S. An old English carpet.
Wallis, H., Esq. A collection of Egyptian objects.
Webb, Captain D. A collection of West African objects.

APPENDIX D.

SOUTH KENSINGTON MUSEUM LOANS.

(2.) LIST of CONTRIBUTORS who WITHDREW their LOANS, wholly or in part, during the Year 1894.

Alcock, Sir R., K.C.B.
Barnes, Captain E.
Beach, W. P., Esq.
Birch, C. B., Esq., A.R.A.
Branton, A., Esq.
Clarke, Mrs.
Collie, A. L., Esq.
Cousens, E. H., Esq.
Crawford, The Earl of.
Cumming, Mrs.
Dillon, F., Esq.
Dixon, Mrs.
Fane, E. G. R., Esq., the representatives of the late.
Frere, G. E., Esq.
Gladstone, the Right Hon. W. E.
Huntly, Marchioness Dowager, the executors of the late.
Kempe, R. C., Esq.
Massey-Mainwaring, the Hon. W. F. B.
Matchwick, W., Esq., the representatives of the late.
Montagu, Sir S., Bart., M.P.
Murray, Captain H. B.
Neale, G. C., Esq.
Poynter, E. J., Esq., R.A.
Poynter, Miss H. M.
Rivett-Carnac, Colonel J. H.
Robbins, Surgeon-Major H. J.
Salting, G., Esq.
Sheppard, Dr. J. B.
Taylor, J. E., Esq.
Verulam, The Right Hon. the Earl of, F.R.G.S.
Walduck, Miss H. E.
Wallis, H., Esq.
Wardle, T., Esq.
Wickes, W. W., Esq.
Wilshire, C. W., Esq.
Works, Her Majesty's Commissioners of.
Zuloaga, Señor.

(3.) LIST of DONATIONS and BEQUESTS to the ART MUSEUM during the year 1894.

	Reg. Nos.
ALLEN, MISS DE L.	
A bodice, waist-band and sampler.	700 to 702-1894.
ALLNUTT, H., ESQ.	
Portrait in oil of William Havell, painted by himself.	870-1894
BACON, T. W., ESQ.	
A Japanese red lacquer screen.	337-1894
BARON, MONSIEUR S.	
A small collection of textiles.	876 to 886–1894
BELL, J., ESQ.	
A plaster figure of the late Prince Consort, by the donor	336-1894.
BINNS, MR. [illegible]	
Two frames of carved wood mouldings	182, 183-1894.
BLENCOWE, MISS M.	
Miniature portraits of Mr. Barbor and Elizabeth Barbor, a pendent jewel with a cameo of Queen Elizabeth, and a rock crystal seal.	887 to 890-1894
COMMITTEE FOR THE PURCHASE AND DISTRIBUTION OF THE CARTOONS OF THE LATE FORD MADOX BROWN	
A design for a stained glass window, "Chancellor Holbrook of Peterhouse"	647-1894
A study of drapery.	780-1894
COPE, A. S., ESQ.	
Three cartoons, by C. W. Cope, R.A., for frescoes in the Houses of Parliament	856 to 858-1894
CURLING, THE LATE R., ESQ., J.P.	
An oil painting after Van Mieris	186-1894
DE MERLE, THE LATE MRS. A.	
Three oil paintings and a Venetian needle point lace flounce	852 to 855-1894.
FORRER, HERR R.	
A fragment of printed cotton.	827-1894
HAMILTON, COUNTESS.	
A small [illegible]	501-1894
HART, MRS. F. A.	
An embroidered coat and breeches.	871-1894

Appendix D.

SOUTH KENSINGTON MUSEUM RETURNS.

HILL, THE LATE J., ESQ.
Five oil paintings by K. Heffner, an oil painting by Vicat Cole, R.A., and a water-colour painting by H. S. Marks, R.A. 863 to 869–1894.
HUNTER, THE REV. W.
A carved ivory fan and a lacquer fan. 344, 345–1894.
INDIA, THE SECRETARY OF STATE FOR.
Six cannon. 1 to 6–1894 (I. S.).
Eighteen books. 8, 12 to 14, 17–1894 (I. S.).
LANGTON, MISS.
A puzzle jug, a porcelain jug and basin, two dresses and a waistcoat. 338 to 343–1894.
LONDON, THE CORPORATION OF THE CITY OF.
The bronze medal in commemoration of the visit in 1893 of Their Royal Highnesses the Duke and Duchess of York. 508–1894.
The gilt bronze medal in commemoration of the visit in 1893 of His Majesty the King of Denmark. 509–1894.
MAW & CO., MESSRS., LIMITED.
A panel of lustred tiles. 3–1894.
MEDWIN, THE LATE DR.
Specimens of earthenware, chiefly painted by Lessore. 510 to 565–1894.
MIDDLETON, J. H., ESQ., M.A., LL.D., LITT. D., D.C.L., F.S.A.
A stained glass window from Cairo. 873–1894.
ORROCK, J., ESQ., R.I.
A water-colour painting, by the donor. 255–1894.
An oil painting, by H. Dawson. 177–1894.
Two water-colour paintings, by R. Hills. 284, 285–1894.
PETRIE, PROFESSOR FLINDERS, D.C.L.
Specimens of Egypto-Roman sculpture from Koptos. 503 to 506–1894.
POTTS, B. L. F., ESQ.
A bronze ring. 507–1894.
POWELL, J. C., ESQ.
Two carved wood chairs. 184, 185–1894.
ROBINSON, J. VINCENT, ESQ., C.I.E.
Portions of a ceiling from Damascus. 618–1894.
SAUNDERS, THE LATE MISS L. M.
Two pictures in needlework. 871, 872–1894.
TAYLOR, J. E., ESQ.
Sixty-six water-colour paintings. 60 to 125–1894.
THOMSON, MRS. E. H.
A Spanish tortoiseshell comb. 234–1894.
TUSON, MRS.
A Burmese Order. 9–1894 (I. S.).
WALLIS, H., ESQ.
A fragment of Persian velvet. 791–1894.
WATT, MRS. E.
A set of ivory studs, a lacquer box, a crystal cross and beads, a silk scarf, and a Japanese kettle. 502, 696 to 699–1894.

Appendix D.

South Kensington Museum Returns.

(4.) ABSTRACT of OBJECTS acquired for the ART COLLECTIONS (excluding Casts and Electrotypes) by purchase or Gift, during the year ended 31st December 1894.

Class.	——	Given.	Bought.	Cost. £	s.	d.
I.	Sculpture in marble, stone, &c. - - -	5	12	1,228	15	[illegible]
II.	Mosaics in stone and glass - - -	—	—	—		
III.	Carvings in ivory, bone, tortoiseshell, &c. -	5	20	130	0	6
IV.	Woodwork, furniture, &c. - - -	9	46	825	10	[illegible]

Appendix E.

REPORT BY DIRECTOR GENERAL.

APPENDIX E.

ANNUAL REPORT of the GEOLOGICAL SURVEY and MUSEUM of PRACTICAL GEOLOGY for the Year ending December 31, 1894.

Geological Survey Office,
28, Jermyn Street, London, S.W.,
6th February 1895.

SIR,

I HAVE the honour to submit, for the information of the Lords of the Committee of Council on Education, my Report of the Geological Survey of the United Kingdom, and of the Museum of Practical Geology for the year 1894.

Following the plan adopted in the last two Reports I shall give under the head of each branch of the Survey, first a general statement regarding changes on the staff, distribution of the field-work and other statistics, and secondly an account of the chief results from a scientific point of view which have been obtained during the year.

I. GEOLOGICAL SURVEY OF THE UNITED KINGDOM.

ENGLAND AND WALES.

A.—*General Statistics.*

Changes in the staff.

It is with much regret that I record the death of Mr. William Topley, after a service of more than 32 years. As he had charge of the general business of the office and acted as editor of the publications and as Secretary to myself, his sudden death caused for a time much dislocation in the office arrangements. I have placed Mr. H. B. Woodward in Mr. Topley's post, and have every reason to believe that he will efficiently discharge its numerous and often exacting duties. The vacancy in the ranks of the Geologists caused by Mr. Topley's death has been filled up by the promotion of Mr. Clement Reid. There is thus one vacancy left in the ranks of the Assistant-Geologists to which reference will be made in the part of my Report dealing with Scotland.

In the early part of the year I transferred Mr. J. R. Dakyns from his work in the Scottish Highlands to South Wales in order that he might aid in expediting the publication of the maps of the great Coal-field of that region.

Field work.

Under Mr. Howell, the Senior Director, three surveyors have been engaged in the centre and north of England, and the Isle of Man. In Yorkshire, Mr. Tiddeman has surveyed an area of 53 square miles, comprising 483 miles of boundary lines of carboniferous rocks and drift.

As promised in my Report for 1893, the revision of the North Staffordshire coal-field has this year been begun, and Mr. De Rance has there mapped an area of 49 square miles with 167 miles of boundary.

In the Isle of Man an area of 57 square miles, with 349 miles of boundary, has been surveyed by Mr. Lamplugh.

In that portion of the southern half of England which has been placed under the charge of Mr. Whitaker, District Surveyor, the field-work has extended over or into the following counties:—Bedfordshire, Berkshire, Buckinghamshire, Dorsetshire, Hampshire, Hertfordshire, Huntingdonshire, Northamptonshire, and Wiltshire. In these areas the field-work for the past year has been as follows. Mr. Cameron has surveyed an area of $65\frac{3}{4}$ square miles, with $215\frac{3}{4}$ miles of boundary in Bedfordshire, Buckinghamshire, Hertfordshire, Huntingdonshire, and Northamptonshire. Mr. Reid has completed an area of $122\frac{1}{2}$ square miles, with 354 miles of boundary in Dorsetshire. Mr. Bennett has mapped an area of $97\frac{1}{2}$ square miles with 193 miles of boundary in Wiltshire. In Berkshire and Hampshire, an area of 51 square miles with 343 miles of boundary has been surveyed by Messrs. Whitaker, Blake, and Hawkins. The persistently wet weather during the autumn of last year, and the consequent flooding of the low grounds considerably impeded the progress of the field-work.

In Leicestershire, Mr. Fox-Strangways, besides continuing his survey of the Triassic rocks and drift has begun the revision of the Coal-field. The area surveyed by him amounts to 63 square miles, with 438 miles of boundary, of which 418¾ miles belong to the superficial formations.

In Devonshire and Cornwall, Mr. Ussher, in continuation of his previous work in the Devonian system, with its associated igneous rocks, has surveyed an area of 71 square miles, comprising 350 miles of boundary.

The revision of the great Coal-field of South Wales has made as satisfactory progress as the smallness of the available staff will permit. In order to push on the work I have, as already stated, transferred Mr. Dakyns from Scotland to this area, so as to clear off those portions of the Old Red Sandstone and Carboniferous Limestone, which come into the Ordnance Sheets that contain the Coal-field. In the Coal-field itself, Mr. Strahan and Mr. Gibson are entirely engaged. The area surveyed by these three officers amounts to 130¾ square miles, with 533 miles of boundary.

In addition to his work in South Wales, Mr. Strahan was occupied for two months in revising and obtaining new data for the Maps of the Whitehaven Coal-field, and during that time he was able to trace 139 miles of boundary line.

The total area surveyed during the past year in England and Wales amounts to 760½ square miles. The total number of miles of boundary line traced is 3,565¾, whereof 1,511¼ represent the solid rocks, and 2,054½ the superficial formations.

Maps in preparation.

The topography of the old series of Ordnance one-inch Maps in the south of England being imperfect and inadequate, it has been decided to engrave the results of the Drift Survey in that region on the New Series of Maps. The sheets that include the Isle of Wight, with portions of the south of Hampshire and Sussex, have been already reported as published. Those lying to the west of the Solent comprising the south-western extremity of Hampshire and Eastern Dorsetshire (Isle of Purbeck), have been completed and sent to the engraver. The progress of the field-work being now sufficiently advanced, other sheets of the New Series will shortly be prepared.

In like manner the revision of the South Wales Coal-field will be reduced upon the New Series of one-inch Maps of which one (No. 249) comprising part of Glamorganshire and Monmouthshire has now been completed.

Much progress has been made in the preparation of the general Map of England and Wales, on the scale of 4 miles to an inch. Of the 13 sheets of which this Map consists, four have been already reported as published. Sheet 11 comprising the tract of country between Reading and the mouth of the Bristol Channel, is almost entirely engraved, and will shortly be issued. Sheet 9, embracing East Anglia, Huntingdonshire, Rutlandshire, with the greater part of Lincolnshire, Cambridgeshire and Northamptonshire, has been completed and sent to the engraver. The remaining seven sheets, with the exception of the Isle of Man, the original survey of which is not yet completed, are all well advanced and will be in the hands of the engraver in the course of the present year.

Horizontal sections.

One Sheet of Horizontal Sections has been published, No. 148, illustrating the geology of the Durham Coal-field, by Mr. H. H. Howell and Mr. D. Burns.

MS. coloured office copies of six-inch maps.

Twenty-two MS. Coloured Copies of six-inch Maps have been made from the field-copies and deposited in the office for public reference; these are as follows :—

Bedfordshire. 18 S.W., 22 N.E.
Huntingdonshire. 13 N.E, and S.E.; 14 N.W., S.W., and S.E.; 16 S.W.
Northamptonshire. 33 S.E.; 40 S.E.; 61 N.E. and S.E.
Hampshire. 35, 43, 45, 60, 61, 78, 79, 85, 86 and 87.

Memoirs published.

The fourth volume of the general Memoir on the Jurassic Rocks of Britain has now been published. It contains a full description of "The Lower "Oolitic Rocks of England, Yorkshire excepted," by Mr H. B. Woodward (pp. xiv., 628; two plates and 137 other illustrations; price 10*s*.). Volume V., containing an account of the Middle and Upper Oolitic Rocks, by the same author, is in type, with the exception of the Appendices, and should be issued this year.

Petrographical Department.

As usual, a large number of rock specimens, has been sent up from the field for examination by Mr. Teall and Mr. Watts, who have furnished reports to the Surveyors, for their guidance in mapping. Mr. Teall dealing chiefly with the gneisses and other crystalline rocks of the Scottish Highlands, has examined under the microscope and described 393 thin slices of rocks. These have been incorporated in the Survey Collection and catalogued under rock names, as well as under the numbers of one-inch sheets of the Survey Map. But besides the determination of rocks submitted to him from the Surveyors in the Highlands of Scotland, he has devoted much time to a thorough study of the fundamental complex of the most ancient gneiss, the general results of which will be stated in the part of this Report dealing with Scotland. He also spent some weeks in mapping the more ancient rocks of Raasay, as will be also more fully stated in the same part of the Report.

In addition to his duties in the petrographical rooms of the Museum, Mr. Watts during the past year has completed the Guide to the Irish Collection in Dublin, referred to in my last Report. He has likewise contributed petrographical notes to forthcoming Survey Memoirs, has furnished reports to the field-officers on the igneous rocks of the Isle of Man, Charnwood Forest, Cumberland, and Devonshire, has re-arranged the miscellaneous rock-collections, and has been constantly called on to render petrographical and other assistance in the work both of the Survey and the Museum.

The total number of rocks from Scotland of which microscopic sections are now preserved in this office is 5,951. The number of those from England and Wales amounts to 2,343.

Applications for information.

Applications for information at the office continue to be numerous, and these have had reference not only to the British Islands but to our Colonies and to various widely separated and remote localities, such as the Solomon Islands and the Antarctic Regions. Wherever possible, information has been given and specimens have been examined and reported on. Many inquiries have been made concerning well-sinking and boring, water-supply, coal-mining, iron-ores, cement-beds, oil-shale, soils and sites for houses, sewage-farms, &c. Many of those to whom information is given, subsequently send to the Office the records of their borings and sinkings. A very large number of these records has thus accumulated, and in order to render them easily accessible a card Cabinet has been obtained, and the whole series will be indexed as soon as it is possible to devote time to the matter.

B.—*Record of Geological Work.*

Older Palæozoic.

In the region of Charnwood Forest already reported on last year as completely surveyed by Mr. Fox-Strangways, some additional information has been obtained regarding the ancient eruptive rocks from a good section that was exposed for a short time in the puddle-trench excavated for the Leicester Corporation Waterworks. A series of specimens was collected from the diorite of Brazil Wood and the altered slates in contact with it, and a number of microscopic slides prepared from them, showing the progressive stages of contact-metamorphism, have been examined by Mr. W. W. Watts.

Silurian.

The survey of the Lower Silurian Rocks of the Isle of Man has been continued by Mr. G. W. Lamplugh, who finds that the Skiddaw Slates of this island, although they possess much lithological variation, are essentially the same mass throughout and are hardly likely to disclose any base to the series. The separation of the arenaceous and the argillaceous groups has been continued as far as practicable; but the complex character of the folding and other disturbances together with the absence of fossiliferous or otherwise traceable zones, make it perhaps impossible to map any sub-divisions in the Silurian Rocks of the island.

Reference was made in the previous Report to certain conglomerates or breccias which it was suggested may have been produced by the breaking up of sandy slates and grits under intense shear strain. These remarkable rocks have been found during the past year to attain an importance altogether unsuspected. Mr. Lamplugh has traced them in definite bands following the prevailing strike of the Skiddaw States, and generally intercalated between an argillaceous and a more or less arenaceous group of strata. He has found one band to run continuously for eight miles, and thereafter, somewhat less clearly,

Appendix E.

REPORT BY DIRECTOR GENERAL.

for four miles further. It frequently measures several hundred yards in width and may be seen ranging along the steep sides of a valley to a depth of from 300 to 700 feet. It is in several places crossed and altered by igneous dykes, which are themselves highly sheared by strains later than those which produced the brecciation. The full details of these remarkable crush-breccias have been carefully worked out by Mr. Lamplugh and will soon be published. A considerable number of dykes of various ingeous rocks has been found traversing the Skiddaw States. These have been studied petrographically by Mr. Watts. They are all of pre-Carboniferous date

In the prosecution of the re-survey of the South Wales Coal-field, it is necessary to map portions of the surrounding older formations in order to complete the geology of the Ordnance sheets within which the Coal-field is comprised. Among the areas thus included the Usk inlier of Upper Silurian strata has been surveyed by Mr. A. Strahan, together with a considerable tract of the Old Red Sandstone enclosing it. He has there ascertained that this inlier is bounded on its north-west and south-east sides by faults. That on the north-west side is an important line of dislocation having a general N.N.E. direction. It skirts the south-eastern side of the Coal-field, passes a little south of Pontypool and then runs for the River Usk about 5½ miles below Abergavenny. Throughout its course the strata adjacent to it are placed at a high angle, being sometimes inverted. Where it brings Silurian Rocks and Old Red Sandstone together, it cuts out portions of both formations and thus prevents any further investigation of the base of the red rocks and their passage into the Silurian series.

Old Red Sandstone and Devonian.

In the same area of South Wales considerable tracts of Old Red Sandstone have been mapped during the past year by Mr. J. R. Dakyns and Mr. Strahan. Sufficient progress has not yet been made to enable these surveyors to group the various members of the formation in such an arrangement as might be traceable throughout the whole region westwards to the coast of Pembrokeshire. But so far as the work has advanced, the following local sub-divisions have been recognized and mapped:—

3. Grey quartzites and conglomerates with some red sandstones. This group forms the uppermost of the whole series.
2. Massive red sandstones with some conglomerates and a few red shales, as well as occasional grey sandstones and thin limestones (cornstones.)
1. Red and variegated marls with bands of soft red sandstone and thin limestones (cornstones).

These three sub-divisions pass into each other. Round this eastern part of the Coal-field they form bold and characteristic topographical features, but they may possibly not continue to do so further west.

The progress of Mr. Ussher's work among the Devonian rocks of Devon and Cornwall during the past year has confirmed and extended his previous mapping. Pushing the survey of the three great sub-divisions of the Devonian system across the south-west of Devonshire into Cornwall, he has been able to recognize and trace the continuation of the Lower Devonian, Lincombe and Warberry grits and slates. These strata extend through the southern part of the Devonian area and are exposed along the coast line, as at Revelstoke, where they are traversed by intrusive felsitic rocks, while they also include diabase-sills and bosses. The general lithological characters of this sub-division are marked by the want of persistence of its different members and the variations in the intercalation of the slates and grits. The slates and hard grit beds of the Kingswear promontory and Revelstoke are extensively developed, besides the grits and sandstones of the Lincombe and Warberry series.

The Middle Devonian group, as it is followed westwards, is found still to consist of slates with occasional traces of volcanic material and local bands of limestone. Rocks probably representing in part the Ashprington volcanic series have been followed into Cornwall, where they are seen at St. Germans.

Upper Devonian strata have been found by Mr. Ussher to be largely developed in the southern parts of the counties of Devon and Cornwall. Thus they are found skirting the Dartmoor Granite, from Kingsbridge Road to Shaugh Prior, not far from Plymouth. In the Plymouth District, they consist of slates with local volcanic materials and a mass of porphyritic diabase at Ford, near Devonport. As they range into Cornwall, they present some specially interesting features. Besides retaining their evidence of contemporaneous [illegible] of Whitwick and strikes for the west-end of Bardon Hill. The effect of this volcanic action, they have yielded fossils which prove their stratigraphical position and allow of their being correlated with the Upper Devonian group of other regions. Thus the characteristic *Entomostraca* have been found by Mr. Ussher north-west and east from St. Germans, as well as abundantly at Carkeel, to the north-west of Saltash. The small *Goniatites* and *Bactrites* of Saltern Cove (marking the Büdesheim fauna, that is the Frasnian or lower part of the Upper Devonian group) have been detected by the same observer two miles E.S.E. from St. Germans. These discoveries, coupled with that of *Entomostraca* near Tor Point, in 1893, are of essential service in tracing the sub-divisions of the Devonian system across the ground. Taken in conjunction with the lithological evidence they show that Upper Devonian rocks are continuous throughout Southern Devonshire and extend into Southern Cornwall.

Carboniferous.

The most important Carboniferous area now engaging the attention of the Geological Survey is that of South Wales. As already stated, the force of surveyors in that district has been increased during the past year, and will be further augmented this year, in order that the re-survey of the Coal-field may be pushed on as rapidly as the available strength of the staff will permit. Three surveyors will be occupied with mapping the coal-bearing districts, while the fourth will for the immediate future be engaged on the Carboniferous Limestone and Old Red Sandstone areas outside, which need to be surveyed to complete the Ordnance Sheets that comprise the Coal-field.

During the past year the mapping of the Carboniferous Limestone of South Wales has presented several points of interest. Though thin and impure around the eastern margin of the Coal-field, this formation has been found by Mr. Strahan to expand somewhat rapidly westwards. Along the southern outcrop, the lower limestone, together with the overlying shales, which separate it from the main limestone above, has been traced for many miles. In the northern outcrop, however, it cannot everywhere be separated, owing to the cessation of the overlying shales. On the other hand, shales are locally developed along that side on a higher horizon. In the middle of the main limestone, as it expands westwards, a remarkable band of white oolite, 40 feet thick, makes its appearance. This rock is in great requisition for blast-furnaces and other purposes, and has been quarried along much of its outcrop. Some parts of the lower limestone are also oolitic, though generally of a dark colour.

The Millstone Grit in the eastern part of the South Wales area consists of alternations of groups of grit and shale. Its base is almost everywhere a coarse grit full of white quartz-pebbles, while the uppermost bed is a strong grit, with few pebbles, and is known to the miners as the Farewell Rock. A thick mass of shale, immediately underlying the Farewell Rock, has been traced across the district, while a thin bed of mudstone, interesting from its included fossils (*Athyris ambigua, Discites falcatus, Nucula æqualis, Productus margaritatus, P. plicatilis, P. longispinus, &c.*) lies a few feet below the shale and has been followed by Mr. Gibson for some miles.

Above the Farewell Rock comes the group of shales with nodules and bands of clay-ironstone which, known as the "Mine ground," formerly supplied so large an amount of iron-ore to the local blast-furnaces. This group of strata is provisionally assigned to the Coal-measures. When it was actively worked for iron, the ore was obtained from large open-air workings, known as "patchworks," which extend for many miles along the hill-sides. In this group also lie the steam-coals, from which the greater part of the coal-supply of South Wales is derived. In the mapping of the coal-field, not only the seams of coal and the principal ironstones, but the prominent quartz-sandstones are traced, in order that the structure of the ground may be accurately determined and clearly represented.

The Steam-coal group passes upward into the Pennant Grit. Locally a seam of house-coal, known as the Tillery or Brithdir Vein, has served as a convenient boundary for the base of the grit, but knowledge of a larger area will be needed before the most widely traceable line of division can be selected. At the top of the Pennant Grit lies the Mynyddislwyn vein of coal. This seam has now been mapped throughout nearly the whole of its extent in Monmouthshire.

During the progress of the survey, it has been found that not only the Carboniferous Limestone, but also the Coal-measures diminish in thickness towards the east. In proof of this statement it may be mentioned that within the area of the coal-field which has now been surveyed, the Pennant Grit

Appendix E.

—

REPORT BY DIRECTOR GENERAL.

and Steam-coal group taken together are 900 feet thicker in the western than in the eastern tracts. Yet the direct distance is not more than ten miles.

The progress of mining, since first the maps of the coal-fields were published, has been so great that many of these maps have become more or less obsolete. It is therefore highly desirable, from an industrial and national point of view, that the surveys of our mineral fields should be revised, in order to place within the reach of the mining community, and of the public generally, an accurate representation of the various coal-fields on which so much of the material prosperity of the country depends. The re-survey of the great coal-field of South Wales has now been in progress for three years, and during the past year that of the North Staffordshire and Leicestershire fields has been begun. In the last-named county Mr. Fox-Strangways has completed the examination of that part of the coal-field which lies between Coalville Heather and Bagworth. Much additional information has been obtained by him regarding the Coal-measures that lie buried beneath the Triassic deposits, and he has been able to trace satisfactorily the general position and arrangement of the coal-bearing strata. One of the most important facts elicited in this revision is the proof that the great line of dislocation, supposed by former observers to stretch from Bardon Hill in a westerly direction, does not exist. Again the Thringston or eastern boundary fault, separating the Coal-measures from the ancient rocks of Charnwood Forest, appears to bend round more to the south than was formerly supposed, since it passes by the west side of the village correction is to show that in the wide bay-like depression of the older rocks between Whitwick and Bardon Hill, the Coal-measures formerly believed to exist there, are probably entirely absent. The margin of the Coal-field cannot therefore stretch so far eastward as was supposed when the original survey of this district was published about 40 years ago.

In the re-survey of the North Staffordshire Coal-field, Mr. C. E. De Rance, to whom it has been entrusted, has found in the course of his work that certain red sandstones and marls on the margin of the North Staffordshire Coal-field, hitherto coloured on the maps as Permian, are not improbably stained Coal-measures. They do not contain Permian fossils or calcareous zones, while, on the contrary, at Trentham they include a seam of coal, and *Calamites* have also been recorded from them.

In Yorkshire, Mr Tiddeman has observed that the Millstone Grit among its numerous alternations of strata, includes a peculiar hard bed, varying from cherty grit to cherty shale, largely composed of minute siliceous organisms and locally known as "blues." It is much in request in the neighbourhood of Keighley, for road-metal, and although only four feet in thickness is laboriously followed. During the progress of his work in the past year Mr. Tiddeman has discovered on the north side of the Craven fault traces of contemporaneous erosion in the Carboniferous Limestone similar to those indicated by the conglomerates of limestone pebbles already noticed by him on the south side.

One further English Carboniferous area has engaged the attention of the Survey during the past year. In Devonshire a portion of the Lower Culm measures has been mapped by Mr. Ussher in the tract of ground bordering the southern margin of the Dartmoor granite. The hard porcellanized grits of that district show the metamorphic influence of the intrusive rock, the limits of alteration usually extending to about half a mile from the visible edge of the granite. Though no apophyses from that rock have been met with in the ground recently surveyed, there is distinct evidence that the general body of the granite does not plunge vertically downward from its exposed margin, but stretches outward for some way under a variable thickness of Culm-measures and Upper Devonian strata. Two inliers of it are to be seen at Hemerdon Ball. The aureole of metamorphism varies in breadth in such a way as to indicate that the granite probably approaches nearer the surface in some parts of the altered belt than in others.

Permian

During last summer certain improvements were made in the mapping of the Whitehaven District, particularly in regard to the boundaries between the formations and the positions of the faults. One of the most interesting results in this re-examination, made by Mr. A. Strahan, was the proof obtained of the existence of two distinct systems of faults, the one older than the Permian period and running from S.W. to N.E., the other later than that period and running from S.E. to N.W. This fact had been previously insisted upon by Mr. J. D. Kendall to whom the Survey is greatly indebted for his generous courtesy in supplying all the information which he had amassed during a residence of many years in the district as a Mining Engineer.

Triassic.

The chief Triassic area in which the Survey has been at work during 1894 lies in Leicestershire, where the Keuper Marls have been mapped together with their overlying Drifts as far as Gopsale Park and Sheepy, or within two miles of the western margin of the county. No new facts of special geological interest have been elicited in the field-work of the past year in this district.

Jurassic.

The opinion having been expressed by Messrs. W. R. Andrews and A. J. Jukes-Browne that there was in the Vale of Wardour a "complete discordance between the Purbeck Beds and the Lower Cretaceous series, including the Wealden," it was felt desirable that Mr. H. B. Woodward, who had formed a contrary opinion, should revisit the area to examine into the alleged evidence, before the Memoir on the Middle and Upper Jurassic Rocks was published. In order that the question might more readily be solved Mr. Strahan who had gained experience of the Purbeck and Wealden Beds in Dorsetshire accompanied Mr. Woodward, and they obtained clear evidence to support the view that the conformity shown elsewhere in England between the Purbeck and Wealden beds is maintained in the Vale of Wardour.

Cretaceous.

The chief work of the past year among the Cretaceous formations has been the tracing of the various sub-divisions of the Chalk over tracts of the southern counties where they had not been previously mapped. Apart from its scientific interest this re-survey of the Chalk is of great economic importance. The maps will henceforth show at a glance the distribution of the various members of the Chalk and thus will furnish accurate information for the guidance of those who have to sink wells or deal with the water-supply and drainage of the wide Chalk-districts of the south of England.

The examination of the Chalk of Dorsetshire and Devonshire has now been carried by Mr. Jukes-Browne to the extreme western limit of this formation. As the result of his observations it appears that while the Upper and Middle divisions continue to be fairly well developed up to the end, the lower Chalk on the coast of South Devon, as was pointed out by Mr. Whitaker some years ago, dwindles down until it almost disappears. One of its prominent characteristics there is the presence of a hard glauconitic limestone. Another feature of the Chalk in this south-western district is that the Melbourn Rock, which has hitherto been such a persistent band at the base of the Middle Chalk, ceases here to be recognizable. On the other hand, the well-known Beer-stone proves to belong to that central division of the formation. This rock is singularly local in its occurrence and is now worked in only one quarry.

Tertiary.

It was stated in my Report for 1893 that the mapping of the Eocene deposits of the western part of the Hampshire basin and of Dorsetshire had brought to light some unexpected features regarding which more definite information might, it was hoped, be given in the present Report. As these deposits are traced westward into Dorsetshire a marked change is observable in their character and thickness. While the Reading Beds still correspond fairly well with their continuation further east, the London Clay becomes more sandy and decreases from 320 feet at the east end of the Isle of Wight to less than 100 feet near Creech, in Dorsetshire. The sediments of the Bagshot series also become coarser, but there appear among them thick deposits of valuable pipe-clay which are absent or are only feebly represented to the east and to the north. Mr. C. Reid who is in charge of the Tertiary revision of this district is unable as yet to state definitely whether the gradual diminution of the London Clay is due to the overlap of the freshwater Bagshot series, or is merely a part of a general decrease of the marine Eocene deposits in a westerly direction.

It may be added that much information regarding the Tertiary and Secondary formations of the South of England has been obtained from well-borings, the sections of which are systematically collected and preserved by the Geological Survey. During the past year the results of some important borings in the London Basin have been discussed by Messrs. Whitaker and Jukes-Browne in a paper communicated to the Geological Society (Quart. Journ. Geol. Soc. Vol. L. (1894), pp. 488–514).

Drift Survey.

During the past year the survey of the Superficial Deposits for the construction of an agronomic map of the country has made good progress, 2,054½ miles of boundary having been traced. Most of the work however has been of a routine character, with few features deserving of special mention in this report.

Appendix E.

REPORT BY DIRECTOR GENERAL.

In Dorsetshire, though the several divisions of the Drift series have been traced for long distances, yet in the absence of fossils, it has been found impossible to fix definitely the age of the older series. In that county no trace has yet been discovered of the marine glacial deposits which have elsewhere yielded such interesting results. The palæolithic implements, so abundant in the neighbourhood of Bournemouth and of the Solent, seem to be confined to deposits later than the marine submergence. At least they are extremely rare in older strata, for none have been met with there in the course of the Survey, and not one seems yet to have been recorded by other observers.

One of the most interesting deposits of the superficial series in this region is the tufaceous accumulation at Blashenwell, near Corfe Castle, first described by Mr. Mansel-Pleydell. It has recently been minutely examined by Mr. Clement Reid in the hope that it might throw some light on certain obscure points in the later Tertiary geology of Dorsetshire. Though from that point of view it yielded little evidence of any consequence, it proved to posses a high interest from another side, for it was found to include a strange mixture of calcareous tufa with kitchen-midden material. The whole deposit is apparently of early Neolithic time, before the introduction of pottery. It is full of waste flint-flakes, charcoal, fragments of bone, and shells of limpet brought for food. This tufa may prove to be of some importance to the archæologist and anthropologist. Mr. Reid is still engaged in a study of the remains of the animals and plants associated together in it.

In my report for the year 1892 reference was made to the occurrence of a transported mass of Chalk in the boulder-clay of Huntingdonshire, so large that a village has been built on it. In continuing the drift survey of the surrounding district, Mr. Cameron has found that a cake or floor of Chalk lying at the base of the boulder-clay may be traced over an area of more than twenty square miles in the west and north of Huntingdonshire and in northern Bedfordshire. It crops out more or less continuously along the brow of the hills under the boulder-clay and rests on the Oxford Clay. It probably consists of many large sheets of chalk which at the beginning of the deposit of the Boulder Clay were transported from the chalk hills lying to the east and north-east.

In Western Leicestershire the drift deposits are found by Mr. Fox-Strangways to be thinner and more gravelly than they are further east, but around Market Bosworth they appear to occupy an old hollow and include some thick beds of brick-earth.

While revising the North Staffordshire Coal-field Mr. De Rance is at the same time surveying the Drift of that region which has not hitherto been mapped. In the course of this work he has found that boulders from the Buttermere granite and also from the porphyrites of the Lake district occur freely around Stoke-upon-Trent in the Trent valley. The largest observed mass, measuring nine feet across, lies near the water-shed. Pre-glacial valleys appear to be of not infrequent occurrence in this district where they are occasionally well exposed in railway-cuttings. According to Mr. De Rance they point to a drainage system distinct from that of the present time; some of those in Cheshire descending to more than 200 feet below the existing sea-level. Shells though rare and fragmentary, occur in the gravel that filled up these ancient valleys, while a sheet of boulder-clay overlies the gravel and rests on the solid rock on either side.

In the Aire valley of Yorkshire Mr. Tiddeman, has remarked a singular distribution of the gravelly drifts near Keighley. These deposits occur at all elevations from 1,150 feet above the sea down almost to the bottom of the valleys. They even overtop the brim of a valley, and occur at such varied heights along the sides that it is difficult to connect them with the action of any streams. They consist of well rolled gravel and sand, in which fragments of grit and sandstone predominate in some places, while pieces of limestone and chert abound in others. All these materials come from the north across the present lines of drainage. On the hills between the Aire and Wharfe, the gravels are disposed in ridges like kames or eskers, which though often interrupted may sometimes be traced in definite lines for long distances. They tend to branch out in the direction of the ice-flow of the district. Limestone pebbles and boulders from the high ground of the Yorkshire hills abound in them and lying as they do on the Millstone Grit plateaux, their calcareous contents have led to their being extensively worked for lime. A number of ice-striæ have been observed on the high hills of the district indicating that the ice moved across the deep tributary valleys of the Aire. On the north side of the Wharfe valley, between Ilkley and Otley, the Till shows a series of terraces which may possibly mark stages in the retreat of the glacier that once filled this hollow.

In the area of South Wales the mapping of the Drift is carried on simultaneously with that of the solid rocks underneath. The existence of esker-gravels along many of the large valleys in the Coal-field has been referred to in previous Reports. During the past year it has been ascertained that a large tract of ground in the Vale of the Usk, between Usk and Abergavenny, is overspread with great mounds and ridges of coarse gravel. Through this irregularly heaped-up mass of detritus, the river has cut a winding channel, sometimes exposing a section of upwards of 100 feet of gravel, while at other places it has evidently filled up former hollows in the Drift. The material of these deposits seems to have been almost wholly derived from Old Red Sandstone hills that lie to the north and west of Abergavenny.

In the valleys that intersect the South Wales Coal-field, and chiefly end in the broad dip-slopes of the northern outcrop of Millstone Grit, much boulder clay as well as gravel has been noticed by Mr. Gibson. It is almost entirely of local origin. That these uplands were overspread with ice is shown by the occurrence of glacial striæ on the Millstone Grit at a height of about 1,500 feet above the sea. Further proof that the ice must have existed in considerable mass has been obtained in the excavations of some new waterworks at Nant-y-bwch, where a hill of sandstone upwards of 200 yards in length has been found to be a transported mass. Though its bedding is only slightly disturbed, yet the whole mass has been ascertained to lie upon boulder-clay and must therefore be regarded as a huge boulder.

In the Isle of Man, Mr. Lamplugh has observed that the marked distinction referred to in my last Report, between the insular Drift of the the hills, and the extra-insular Drift of the low ground still continues. In the hilly area, the Drift is rarely stratified, consists entirely of local débris, and never contains shells; while on the low tracts, extending from the foot of the hills to the sea, the Drift is red in colour, usually more or less stratified, composed largely of material foreign to the island, and contains abundant shell fragments. The relative distribution of these drifts seems to prove that both are of truly glacial origin. Most of the deeper glens in the Isle of Man were probably filled with local glaciers before the coming of the great south-flowing ice-sheet which afterwards overrode the island up to its highest summits. As shown by numerous striæ observed on the Skiddaw Slates, the general march of the ice during the height of the glaciation seems to have been from some point west of north, instead of east of north, as usually stated. The red Drift is heaped up into mounds which touch the hills of Skiddaw Slate on both sides of the island, but sweep off in a curve between these points and thus enclose a low-lying tract known as the "Curragh," which is chiefly occupied by alluvial deposits and bog. The Drift-mounds, and ridges that bound the "Curragh," on the north are partly fringed by a marked gravelly platform resembling the "overwash plains" of American glacialists. On the opposite side of the "Curragh," under the slate hills, large level fans, and bars of slaty-gravel have been thrown out into the plain from the mouths of the larger valleys. It seems not unlikely that these materials were discharged into a body of fresh water, probably dammed back by ice, and derived from the volume of water that drained from the high grounds at the time of the melting of the ice. Some curious effects of stream erosion on the solid rocks, which cannot be explained under the existing conditions of drainage, may be referred to the same period.

At the Kirk Michael and Ballaugh in the Isle of Man, peaty and marly layers have been met with in the slaty gravels, which are thus proved not to be marine accumulations. This peat was found in the gravel at a depth of 15 feet where a well was sunk through it. It contained abundant small seeds which, on examination by Mr. Clement Reid, were found to be referable to at least eight species of bog-loving plants. As all these plants, however, are still living in the island, and have a wide climatal range, they do not yield precise information as to the climate of the period in which the peat was formed. A bed of fine warp or silt in the glacial series of Kirk Michael may prove to be of some economic value. It has been locally used in past time as a fuller's earth, and an effort is now about to be made to introduce it to a wider market for the same purpose. All information regarding this deposit, which has been collected in the course of the Survey, has been placed at the displosal of the principals in the enterprise.

Petrographical work.

Besides examining the numerous rocks sent up by the Officers in the field for microscopical determination, and furnishing more or less detailed reports on these, the petrographers, in such spare time as they can command, devote themselves to the study of petrographical questions which naturally arise in the course of the Survey. In this manner Mr. Teall, having had occasion to make numerous careful examinations of the most ancient gneisses of Scotland, both in the field and in the office with the microscope, has at length been able to generalize his observations and to prepare the first detailed petrographical description which has yet been given of the "fundamental complex" of the Lewisian gneiss. As this research more especially bears upon Scottish geology, an account of it is reserved for the next part of this Report which deals with the progress of the Survey in Scotland.

Extra-official publications by the staff.

During the past year the following memoirs and papers by members of the Geological Survey of England and Wales have been published. On Deep Borings at Culford and Winkfield, with Notes on those at Ware and Cheshunt, by Messrs. W. Whitaker and A. J. Jukes-Browne, *Quart. Journ. Geol. Soc.*, Vol. 50, p. 488. "On Limestone Conglomerate, north of the Craven Fault, by Mr. R. H. Tiddeman, *Proc. Yorkshire Geol. Soc.*," also by the same author "Geological Work for Local Societies," the Presidential Address to the Yorkshire Naturalists' Union. "Geology in the Field and in the Study," by Mr. H. B. Woodward, the Presidential Address to the Geologists' Association. Note on a large mass of Chalk at Catworth, in Huntingdonshire, by Mr. A. C. G. Cameron, *Proc. Geol. Assoc.*, Vol. 13, p. 359. Report of the Committee on Underground Waters, by Mr. C. E. De Rance, *Brit. Assoc.* "The Purbeck Beds of the Vale of Wardour," by the Rev. W. R. Andrews and Mr. Jukes-Browne, *Quart. Journ. Geol. Soc.*, Vol. 50, p. 44. "Notes on the Occurrence of Perlitic Cracks in Quartz," by Mr. W. W. Watts, *Quart. Journ. Geol. Soc.*, Vol 50, p. 367. "The Geology of South Shropshire," by Professor Lapworth, F.R.S., and Mr. Watts, *Proc. Geol. Assoc.*, Vol. 13, p. 297. "Notes upon the Snowfall of the Glacial Period," by Mr. G. W. Lamplugh, *Glacialists Mag.*, Vol. 1, p. 231.

SCOTLAND.

A.—*General Statistics.*

Mr. Howell, Director of the Survey, reports to me that during the past year the total area surveyed in Scotland amounts to 584¼ square miles with 4,222¼ miles of boundary lines. The detailed nature of the mapping will be seen from the fact that each square mile involved the tracing of an average of rather more than seven miles of boundary lines. The number of square miles surveyed is [illegible] than that returned for 1893, but the number of miles of boundary is [illegible] miles more. The return would have been larger but for serious illness in the staff. Mr Barrow was attacked with [illegible] brought on by exposure in his field-work, and was [illegible] for three months during the best part of the working season. Mr. [illegible] also suffered from a serious illness which kept him from field-work until May and the effects of which for some time thereafter retarded his progress. A further diminution of the amount of field-work has arisen from the transference of Mr. Dakyns at the beginning of June to the Survey of England and Wales.

After an inspection of Mr. Dakyns's ground and his maps I came to the conclusion that his qualities as a Surveyor would be much more serviceable to the progress of the Survey if he were placed on some of the Palæozoic formations. Accordingly, as already stated in a previous part of this Report, I stationed him on the north side of the South Wales Coal-field with instructions to map the Old Red Sandstone and Carboniferous Limestone in the areas required for the completion of the Sheets of the Coal-field map. The staff in Scotland has thus been diminished by one, but the vacancy [illegible]

Appendix E.

REPORT BY DIRECTOR GENERAL.

I hope be filled up in time to allow the new officer to take the field for his training early this season.

The field-work during the past year has been prosecuted in five separate areas of Scotland. 1st, the north-west Highlands including Raasay and Skye; 2nd, the north-east Highlands including eastern Sutherland, Ross, and the region north of the axis of the Grampian Chain; 3rd, the central and south-western Highlands, south of the Grampians, including Islay, Jura, and adjacent islands; 4th, south-western Ayrshire; 5th, the east of Fife.

(1.) In the north-western Highlands the surveying has been carried on by six officers of the staff—Messrs. Peach, Horne, Woodward, Teall, Clough, and Hinxman, the general supervision of the work being under the charge of Mr. Peach, as District Surveyor. Mr. Peach was himself stationed for two months at Strathcarron whence he completed the areas assigned to him in Sheet 81 and carried his lines southward to Loch Alsh. Afterwards he moved to Kyle opposite Skye, so as to complete the mapping of the western part of the peninsula south of Loch Carron. Mr. Horne proceeded first to Kinlochewe, and working from that centre and subsequently from Strathcarron till the 7th July, he was able to clear off a tract of high mountainous ground stretching between Loch Coulin and Auchnashellach. Joining Mr. Peach at Kyle, he aided in completing the mapping of that part of the district.

Mr. Clough continued his survey of Skye and has pushed the work southward in Sleat to beyond Isle Oronsay and Ord. Mr. Hinxman was this year able to complete from Strathcarron the whole of the district in Sheets 81 and 82 assigned to him. The total area of ground surveyed by Messrs. Peach, Horne, Clough, and Hinxman, during the brief period when field-work among the deer-forests of the north-west Highlands is practicable, amounts to 107¾ square miles and includes the tracing of 852 miles of geological boundary lines.

Mr. Teall was able this year to resume his field-work on the Lewisian gneiss. He stationed himself in the island of Raasay, and finished the survey of the gneiss there, besides obtaining fresh material for the study of that ancient formation. Mr. H. B. Woodward continued last year his work among the Jurassic rocks of the north-west Highlands. Besides an outlying area at Applecross, he mapped the coast north and south of Portree in Skye, and completed all the area, amounting to 20 square miles, that was required to permit of the engraving and publishing of Sheet 81 of the one-inch map.

In the course of the summer I made a visit of inspection in the North-west Highland area and saw each of the officers on his ground. I shall refer to some of the results of this inspection in the next part of this Report, dealing with the geological work done by the survey in Scotland during the past year.

(2.) In the north-east Highlands a staff of seven surveyors has been at work from the northern coast of Sutherland and Caithness, across the basin of the Moray Firth to the valley of Strathspey, Banffshire and the Dee. Mr. Peach proceeded from Ross-shire to the north coast of Caithness, in order to complete some small outstanding areas in Sheet 115. Mr. Horne, for a short time in spring, before beginning field-work in the west of Ross-shire, continued his former mapping in Inverness-shire, taking as a centre, Kiltarlity to the west of Beauly. On ceasing for the season in Ross-shire, he preceeded to the north coast of Sutherland and Caithness, and, like Mr. Peach, completed some small unfinished tracts in that district.

From his central station in Inverness Mr. Horne had general charge of the mapping in the north-east Highlands. Under his supervision, Mr. Miller has been employed in the eastern tracts of Sutherland over the somewhat inaccessible region between Ben Armine and the Brora Valley, and during three months of the time camped out in a tent. Mr. E. Greenly was likewise engaged in eastern Sutherland from Kinbrace as his central station.

In the valley of the Strathspey, Mr. Hinxman has been at work during the whole of the season, with the exception of the few weeks when he was completing the area from Strathcarron already referred to. He has mapped a tract of country amounting to about 60 square miles in that valley lying to the north of the base of the Cairngorm Mountains. I joined him in October, and inspected his work at Aviemore and Craigellachie. Further to the north and east Mr. J. S. Grant-Wilson has mapped 85 square miles with 181 miles of boundary lines, and has now completed all the area assigned to him in Sheet 85.

Appendix E.

REPORT BY DIRECTOR GENERAL.

Mr. Barrow, soon after taking the field in the beginning of April, was seized with the illness to which I have already referred, and was unable to return to duty until the 19th July. He was instructed to map the northern side of the great mass of granite lying to the south of the Dee, and in spite of his illness and its effects, he has succeeded in surveying 44 square miles of hilly ground and in tracing 213 linear miles of boundary lines.

(3.) Central and South-western Highlands. In the region south of the axis of the Grampian Chain, including Argyllshire and the islands, seven surveyors have been at work during the past year. Beginning at the north-east end of the region, I may notice that before betaking himself to Deeside, Mr. Barrow spent a short time in filling in a few remaining details of the mapping of the remarkable strip of Lower Silurian rocks, which intervenes between the great Highland boundary fault and the crystalline schists to the north. Mr. Dakyns was stationed at Aberfoyle during the month of May, and mapped an area of 6½ square miles there, with 28 miles of boundary, before he was transferred to South Wales. Mr. Clough, besides his field-work in the north-west, has continued his survey of Argyllshire, and has surveyed 12 square miles there, and 139 linear miles of boundaries, thus completing the area prescribed to him in Sheet 37.

Farther to the west, Mr. Hill has been engaged in the district between Loch Fyne and Loch Awe, working first from the central station of Kilmartin, and afterwards from Minard. He has completed an area of 10 square miles, comprising 62 linear miles of boundary lines. In Cantyre, Mr. Symes, working his way northwards, has now finished about two-thirds of the tract of country that lies between West Loch Tarbert and the Mull of Cantyre, his area for the past year being 15½ square miles, with 148½ miles of boundary. I inspected his work in the field in the early part of the autumn. Mr. Wilkinson has continued his survey of Islay, but his illness, already alluded to, greatly retarded his progress. The geological structure of this island has proved most unexpectedly difficult and tedious to unravel. In order to assist in the mapping of it, Mr. Clough was detailed for some weeks to join Mr. Wilkinson, but the solution of the problems has still escaped detection. It is hoped that during the spring of the present year the true succession of the rocks and the structure of the ground will be definitely made out.

Instead of resuming his summer work in Ross-shire, Mr. Gunn was stationed in the island of Arran during the whole working season. I spent a short time with Mr. Peach and him in this island during the month of March, and I considered that it would be more conducive to the general progress of the work of the Survey if he were detailed to complete the mapping of the northern half of Arran, so as to allow Sheet 13 of the Geological Survey of Scotland to be engraved and published. With the exception of a few doubtful points, which will be settled by a subsequent visit, the area assigned to him in that Sheet has been finished, and the map will now be prepared for the engraver. The area surveyed by Mr. Gunn during last year amounts to 40¼ square miles, involving the tracing of 104 miles of boundary-lines.

(4.) Ayrshire. Since the map of the south-western part of this county was published about 30 years ago, much new light has been thrown on the structure of the Silurian Uplands of the south of Scotland. It seemed to me highly desirable that this map should be revised and brought up to date, more especially as the ground represented in it might be expected to clear up some of the difficulties still unexplained in the interior of the country. As I had myself done part of the original mapping of the district, I asked Mr. Peach to join me in October at Ballantrae, and we spent a week or two in examining the coast-sections and making traverses across various inland tracts. When we had in this way ascertained the nature and extent of the revision that would be required, I left the work in Mr. Peach's charge, and arranged that he should be immediately joined by Mr. Horne. Favoured by remarkably fine weather, these two officers succeeded in completing the work before Christmas.

(5.) Fife Coal-field. In the early spring of the past year, before proceeding to his station in Strathmore, Mr. J. S. Grant Wilson spent some time in procuring fresh information from coal-proprietors, lessees and mining engineers for a new edition of the one-inch map containing the Fife Coal-field. The material required for this purpose is now nearly complete, and the map will, it is expected, be ready for the engraver this year.

Palæontological work.

The number of new specimens of fossils obtained by the Collectors during last year and added to the collections of the Survey amounts to 1,287. Of these, 422 were gathered by Mr. A. Macconochie from the *Olenellus*-zone of Ross-shire, the "fucoid beds" of Islay, and the Silurian formations of Ayrshire. Mr. Bennie collected 365 fossils from the glacial deposits of Midlothian, Fife, and Argyleshire.

Mr. Peach, as acting Palæontologist, has determined the Silurian, and Cambrian fossils collected in the field and has figured and described some new trilobites from the *Olenellus*-zone.

Petrographical work.

During last year the number of specimens of rocks collected amounted to 1,038. They were obtained by Mr. Macconochie to illustrate the geology of the counties of Aberdeen, Argyle, Banff, Fife, Midlothian, Ross, and Cromarty. 817 thin slices of rocks have been cut, and prepared for microscopic investigation. The number of such microscopic preparations of Scottish rocks now in the Survey Collection, properly arranged and indexed, amounts to 5,951.

Mr. Teall has as usual furnished detailed reports to the officers in the field, regarding the petrographical structure of the rocks in their districts. He has likewise himself spent some weeks in a critical study of the Lewisian gneiss at Raasay, and has met and conferred with Messrs. Peach, Horne, Clough, and Hinxman with respect to some of the petrographical questions arising in the course of their field-work.

Photographical work.

Further progress has been made in the application of photography to the purposes of geological surveying, and during last year 48 negatives of interesting and important geological features were taken.

Museum work.

Mr. Goodchild, Curator of the Geological Survey Collections in the Edinburgh Museum of Science and Art, besides his ordinary duties in the galleries of the Museum, has, at the request of the Director, assisted in the removal of a valuable collection of Scottish Minerals acquired from Dr. Heddle of St. Andrews. This collection is being arranged in new cases in the same part of the building with the Survey Collections, and will form an exceedingly interesting and important feature in the illustration which it is our object to present of the Minerals, Rocks, and Fossils of Scotland. Much of Mr. Goodchild's time has necessarily been given to this transference and re-arrangement.

The large series of rock-specimens from the counties of Sutherland and Ross has been entirely re-arranged, and those from the central Highlands are undergoing a similar revision, all recent additions being incorporated in the series exhibited in the cases.

Maps published and engraving.

One sheet of the one-inch map (No. 12) has been published. It embraces the southern end of Cantyre, with Campbelton as a centre. Six sheets of the same map are with the engraver viz.:—46 (Glen Orchy to Loch Tay), 55 (Dunkeld to Dalnaspidal). 56 (Spittal of Glenshee, Blairgowrie, Kirriemuir, Glamis), 75 (Tomintoul, Strath Don), 103 (Dornoch to Helmsdale), 115 (Northern Sutherland, and north-western Caithness).

A new edition of Sheet 40 embracing the greater part of the Fife Coal-field has been prepared, and will now be sent to the engraver.

B.—*Record of Geological Work.*

I will now proceed to give a summary of the most important features of the Survey Work during the past year in Scotland, and of the chief scientific results that have been obtained. It will be most convenient to take each of the geological formations in order, beginning with the oldest.

Lewisian Gneiss

As announced in my Report all the tracts of Lewisian Gneiss on the mainland, from Cape Wrath to the Kyles of Skye, have been mapped, but there are many displaced tracts or slices of that formation which lie to the east of the great line of complication, and have undergone more or less deformation in the course of the gigantic earth-movements which placed them in their present positions. So far as at present known, no unmoved tracts of the oldest gneiss are to be looked for in the regions of Ross-shire, and Inverness-shire yet to be mapped, but there may be many more or less recognizable disrupted masses among the crystalline schists of that region.

The only area where any of the Lewisian gneiss was mapped last year, on the western or undisturbed side of the great line of displacement, lay in the

Appendix E.
—
Report by Director General.

Island of Raasay, where, as already stated, Mr. Teall completed the survey of these oldest rocks. As far as the mapping of the north-west Highlands has advanced, the various crystalline rocks older than the Torridon Sandstone, and comprised under the general designation of Lewisian Gneiss may be divided into five distinct groups. 1st. What has been termed the "fundamental complex," consisting of various more or less banded and foliated rocks which form together the oldest, and chief part of the gneiss. 2nd Highly basic dykes cutting the fundamental complex. 3rd. Dykes, and sills of dolerite, epidiorite, and hornblende-schist. 4th. A few dykes of peculiar composition. 5th. Gneissose granite, and pegmatite.

Mr. Teall has devoted himself, both in the field, and with the microscope in the office, to the patient study of these rocks, and he has at last been able to formulate his views regarding the nature and composition of the various rocks comprised within the first of these sub-divisions, the "fundamental complex." He reports to me that over the greater portion of the area between Skye and Cape Wrath the rocks of the "fundamental complex" have decided affinities, both as regards chemical, and mineralogical composition with plutonic igneous products, and his detailed Report, so far as these rocks are concerned, is now fairly complete. They are essentially composed of olivine, hypersthene, augite (including diallage), hornblende, biotite, plagioclase, orthoclase, microcline, and quartz; and the laws of paragenesis are the same as those which govern the composition of peridotites, gabbros, diorites, and granites. It is rare to find any one petrographical type persistent over a large area. Variations in the relative proportions of the different constituents are almost everywhere recognisable, and these variations may be either abrupt or gradual. The architectural features of the Lewisian Gneiss, dependent upon the mutual relations of the different petrographical types, are well represented in the series of photographs taken in 1891, and it is proposed to use these photographs in illustration of the detailed report. One general law appears to have been established as far as the fundamental complex is concerned. Whenever the relative ages of two distinct petrographical types can be clearly ascertained the more basic is older than the more acid.

In classifying the rocks, either with reference to structure or composition difficulties arise in consequence of transitions in various directions. Many schemes have been devised and the following one, based primarily on mineralogical composition, and to a subordinate extent on structure, has been devised by Mr Teall for descriptive purposes. Theoretical considerations have been excluded, and it is hoped that whatever view may be finally adopted the broad general facts will be found to have been correctly recorded:—

I. Rocks composed of ferro-magnesian minerals without felspar or quartz.
  (1.) Pyroxenites.
    Locality. Scourie, Drumbeg.
  (2.) Hornblendites.
    Same localities as pyroxenites, and also as lumps in the gneiss of many other localities.

II. Rocks in which pyroxenes are the dominating ferro-magnesian constituents. Felspar always present and in some cases quartz.
  A. Without quartz.
    (*a.*) Hypersthene-augite-rocks.
      1. With garnet (pyroxene-granulites.)
        Locality. Scourie.
      2. Without garnet (rocks of the Baltimore-Gabbro type).
        Locality. Scourie, Gruinard.
    (*b.*) Augite-rocks. Gabbros in structure and composition, but forming part of the fundamental complex and often associated with quartz bearing rocks of a similar character.
        Locality. Kyle Sku, Loch Inver.
  B. With quartz.
    1. Augite gneiss
      Locality. Kyle Sku, Loch Inver.

III. Rocks in which hornblende is the dominating ferro-magnesian constituent.
  A. Without quartz, or containing it only in small quantity. Rocks basic in composition.
    (*a.*) Rocks massive or only slightly foliated (Amphibolites).
      1. Epidote-amphibolite.
        Locality. Near Stoer.
      2. Zoisite-amphibolite
        Locality. Sangomore Bay.
      3. Garnet-amphibolite.
        Locality. Between Scourie and Laxford Bridge.

(*b*.) Rocks foliated.—
Hornblende schist.
Locality. Between Laxford Bridge and Durness, also at Shieldag, Rona, and many other localities.
Note.—Many of the hornblende-schists found in the Lewisian gneiss are foliated dykes.

B. With quartz. Rocks intermediate or acid in composition.
1. Rocks with compact hornblende and a granular structure. Hornblende-gneiss (proper).
   Locality. Between Laxford Bridge and Durness. Poolewe, Rona, Raasay, and many other localities.
2. Rocks with hornblende occurring in fibrous or other aggregates :—
   Locality. Between Scourie and Loch Inver especially found in the same area as the augite-gneisses.
3. Rocks with compact hornblende, and a more or less granulitic structure. Granulitic hornblende-gneiss.
   Locality. In zones of secondary shear about Loch Inver.

IV. Rocks in which biotite is the dominating ferro-magnesian constituent. Felspar and quartz both present.

1. Biotite occurring as independent plates or in aggregates of two or three large individuals.
   Biotite-gneiss (proper).
   Locality. Between Laxford Bridge and Durness, Rona, Raasay, and many other localities.
2. Biotite occurring in aggregates of numerous small individuals.
   Locality. Associated with the augite-gneisses. A rare type.
3. Biotite occurring as independent plates. Structure granulitic.
   Locality. In zones of secondary shear.

Returning now to the tracts of displaced Lewisian Gneiss east from the great line of complicated structure, I would remark that in addition to what were noticed in my last Report, some striking examples of large slices of the gneiss among the overlying Torridonian strata have been found in the same tract of country between Loch Carron and Loch Alsh, as well as between Loch Carron and Loch Coulin. Another mass of similar material has been met with along the south-east coast of Skye to the south of Loch na Daal.

Torridonian.

The sub-divisions of the Torridonian series given in my last Report, have been found to hold good over the area surveyed during the past year. The lowest division or Diabeg group is probably not less in thickness than was estimated by Mr. Clough in Skye, though it seems to thin out on the mainland to the north.

While mapping the Lewisian gneiss of Raasay, Mr. Teall observed some curious patches of breccia in that island. One of these descends vertically into the Torridon Sandstone, another occupies a similar position in the gneiss. The breccia consists of fragments of Torridon Sandstone cemented with calcite, from which small rhombs of clear Iceland spar may be obtained. In one instance where the outlines of the breccia can be more distinctly traced, the ground plan of the mass is nearly semicircular, as if the breccia formed a plug in the Torridon Sandstone.

Cambrian.

Some interesting additions have recently been made to our knowledge of the Cambrian rocks of the north-west. Mr. Horne has found a band of fossiliferous ironstone, about two feet thick, in the "Fucoid beds" above Auchnashellach Station. This seam is full of a small discinoid or linguloid brachiopod. Mr. Macconochie has renewed his search for fossils in the *Olenellus*-zone and has obtained additional specimens not only from the localities above Loch Maree and near Dundonnel, but from other outcrops of the same zone further to the north. He has detected fragments of trilobites together with other fossils of the same horizon on both sides of Loch Broom near Ullapool. He has likewise found them where the "fucoid beds" appear in the River Achull, the Allatryne Burn, Strath Kaniard, Drumrunie and Knockan. Still further north Mr. Peach has obtained fragments of *Olenellus* from the same horizon at Inchnadamph. The ironstone-bed with brachiopods just referred to has been recognised by Mr. Macconochie in Glen Logan and other parts of the Loch Maree district. It is thus shown that the "Fucoid beds" contain the fossils of the *Olenellus*-zone from the River Carron in Ross-shire to Loch Assynt in Sutherland.

Among the specimens collected this year from above Loch Maree, new material is provided for completing the structure of the genus *Olenelloides*, and some minute tribolites which may prove to be larval forms of an *Olenellus* remain to be studied.

Appendix E.

REPORT BY DIRECTOR GENERAL.

An important addition to the evidence that tends to connect the quartzites and their associated strata of the south-western Highlands with those of Sutherland and Ross, has been obtained in the island of Islay. Reference was made in my last Report to the occurrence of worm-tracks in the dolomitic shales of that district which so greatly resemble the characteristic "Fucoid beds" of the North-west Highlands. Twenty specimens of tracks and burrows from the Islay shales have been obtained by Mr. Macconochie, and perhaps it is not too much to hope that eventually some of the other more distinctive fossils of the *Olenellus*-zone may yet be detected there.

In further prosecution of his mapping of the ground between Loch Carron and Loch Alsh, Mr. Peach has obtained additional confirmatory evidence of the view expressed in my last Report that the "Moine-schists" of that region are mainly altered Torridon sandstone and shale. These strata and their floor of Lewisian Gneiss, which is occasionally brought up along sharp folds to the surface, are increasingly metamorphosed as they pass to the eastward.

Not less suggestive is the evidence recently obtained by Mr. Horne during his survey of the mountainous ground between the head of Loch Carron and Loch Maree. To the east of the great line of dislocation known as the Glen Logan or Kishorn Thrust-plane, as in the ground south of Loch Carron, lenticles of Lewisian Gneiss, brought up on the axes of isoclinal folds, occur among the Torridonian rocks, the whole series dipping in an easterly direction. That these long narrow exposures of gneiss are part of the actual floor on which the sedimentary formations rest, is proved by the occurrence of the basal Torridonian epidotic grits resting upon them. By means of this readily recognizable zone of grits and the shaly group that overlies them, it is not difficult to map out each separate isocline and to follow both the succession of the rocks and the structure of the ground. Having visited this area and inspected Mr. Horne's mapping of it, I can speak confidently of the care and skill with which the survey has been made and of the value of the evidence which it brings to bear on the history of the "Moine-schists" or "younger gneiss." As we advance eastwards, this metamorphism becomes more marked, the peculiar type or structure of the Moine or eastern schists coming out more and more clearly. It is difficult to understand that any other explanation of the sections can be adopted than that which obviously presents itself on the ground, namely that rocks having every character of true Moine schists have here been produced by the alteration of a portion of the lowest Torridonian grits and shales with infolded cores of Lewisian gneiss.

In eastern Sutherland, Mr. Miller, has obtained further evidence in favour of his views expressed in last year's Report regarding the relation of the eastern schists to the granites of the region. Mr. Greenly in continuing the survey of the ground further north, has treated as altered sedimentary rocks three groups of schists which stretch over a wide area in the east of Sutherland—(1) Quartz-schists, (2) Granulitic mica-schist, and (3) Flaky or flaser mica-schists. On the east side of the Borrobol area, however, the rocks increase in crystalline development and present types of granulitic gneiss, flaky or flaser-gneiss and granite. There is here a relation between the more highly crystalline structure and the presence of granite. Mr. Horne also has renewed his examination of the eastern schists in the north of Sutherland, and has obtained further evidence in support of the view that altered sediments form an integral portion of the granulitic schists and gneiss of that region. He has found the mineral sillimanite in certain biotite-schists that form belts in the granulitic series or inclusions in the foliated granites. The intimate connection of the gneissic and granulitic condition of the rocks with the presence of granitic material and the action of a granitic magma has again been observed by him. He specially directed his attention to the relation of the margins of the granitic veins, bands and folia to the granulitic series which they traverse. Mr Teall in the course of his study of the microscopic slices made from these rocks, had called attention to the interlocking of the minerals between the granitic material and the granulitic rocks, and he pointed out that this would be the case if the crystallization of both rocks had been practically simultaneous. Bearing this observation in mind, Mr. Horne in his recent traverses of the ground has been unable to detect any trace of fine grained margins indicating a chilling and more rapid consolidation of the outer parts of the injected granite, while,

Appendix E.

REPORT BY DIRECTOR GENERAL.

on the other hand, he has frequently noted the interlocking of the crystals of the two kinds of rock along their mutual boundaries.

In the tract of country along the north side of the axis of the Grampian Chain, the mapping of the younger schists has made steady progress during the past year, but no important additions to the materials for solving the various problems presented by these rocks have been made. The most interesting features in the region have been those connected with the intrusive rocks. Thus Mr. Hinxman, working in that part of Strathspey, which embraces the districts of Rothiemurchus, Abernethy and the ground between the Spey and the Dulnan, west from Aviemore, has met with a large tract of biotite-granite, similar to that of the Cairn-Gorm range, to which he proposes to give the name of Monadhliath Granite, since it forms the eastern border of the Monadhliath mountains. In the course of my inspection in Scotland, I took an opportunity of examining some of Mr. Hinxman's ground in this region, devoting particular attention to the junction of the granite with the surrounding schists. He has ascertained that in this area, also, though the granite is fringed with abundant apophyses which penetrate the gneiss to distances varying from a few feet to 300 yards, no fine-grained edges indicative of the chilling of the intruded granite are to be seen. The injections of eruptive material have usually taken place along the planes of foliation, and the bands or veins of granite tend to branch out into mere strings. Besides the apophyses that can actually be traced into the main body of granite, many sills, bands or lenticular veins of similar material, may be seen in the gneiss immediately around the granite, and doubtless emanating from it. All the granitic bands, sills or veins, whether visibly proceeding from the granite mass or not, are thoroughly granitoid in texture and sometimes markedly pegmatitic. Not only do they present no chilled margins, but their crystals may be seen to interlock with those of the surrounding schists. Hence in this area also, there appears to be no reason to doubt that the present crystalline condition of the schists is coeval with the crystallization of the material of the granite veins. The evidence, so far as it has at present been collected, appears to point to two conclusions. First, that the granites of Cairn Gorm, Monadhliath and other parts of Strathspey, together with the most, if not all, of the sills and veins of granite and pegmatite in that region, belong to the same granitic protrusion and are derived from the same magma. Second, that this granitic magma has been protuded into a series of holocrystalline schists and quartzites, and that the contact-metamorphism thereby superinduced, gave rise to the highly granulitic biotite-gneiss with bands of quartzite, which now forms the prevalent rock of the whole region.

In Deeside, Mr. Barrow has ascertained that the great granitic mass south of Banchory presents a very different character. The granite becomes rapidly finer in grain towards its margin, where it assumes the compact texture characteristic of a granite injected among already cooled rocks, while its apophyses are finer in grain than the main body of the rock. Of older date than this eruption is the granitic material, composed of microcline, quartz, and brown mica, which in a vast number of narrow dykes or veins traverses the highly crystalline schists of the south side of the Dee.

In the south-west Highlands Mr. Hill has found further evidence of the almost entirely unaltered condition of the sedimentary series of rocks around Kilmartin and thence to Loch Awe. He particularly devoted attention to a group of green sediments which, when examined by Mr. Teall, had been found to show no trace of schistosity and little or no appearance of crushing. He found that these were not younger strata folded with the schists, but could be traced continuously into his "Loch Awe Group."

Mr. Clough has been engaged among the schists around the remarkable area of Garobol Hill described by Messrs. Dakyns and Teall, and has particularly studied the contact-metamorphism of the region. He has found that the albite schists when within a mile of the granite, begin to show small prisms of andalusite, which increase in size and abundance until they form a close network on weathered surfaces. At the same time small nests, about the size of a pea, of black and bronze mica become abundant, together with specks and streaks of iron-pyrites and veins of epidote; while the albite crystals of the schists often lose their water-clear aspect and assume a fleshcolour. The strike of the foliation is likewise brought into a general parallelism with the margin of the granite. No sharp edge is found to the [illegible] mass. From the schists we pass across a band about 20 or 30 yards broad composed of alternations of schists and granite, into the body of the [illegible] rock. No traces of fine-grained chilled margins are here visible, the granitic material being as coarse along the edges of a band as in the centre. The schists for about 120 yards from the granite are, as it were, impregnated with granitic material.

Silurian. The revision of the south-west of Ayrshire by Messrs. Peach and Horne has brought to light many interesting features connected with the [illegible] of volcanic rocks now known to underlie a large part of the Silurian [illegible] of the south of Scotland. But as the work was not completed until nearly the end of the year there has not yet been time to arrange and correlate the results. One of the most interesting features of the revision has been the recognition of some of the agglomerates and breccias of the volcanic series. Some of these rocks are full of scattered crystals of augite which may be extracted as perfect from these ancient Arenig tuffs as from any recent ashes of Vesuvius. The existence of fossiliferous strata has been detected in a number of places so that the structure of the ground can now be fairly well made out. Besides the lavas and tuffs of Arenig and Lower Llandeilo age there are numerous intrusive masses which vary from typical serpentines to granites. But these intrusions appear to be generally older than the Caradoc group.

Old Red Sandstone. The only area where mapping of the Old Red Sandstone was carried on last year in Scotland is in the island of Arran, where Mr. Gunn has found three groups of strata in the formation. The oldest is a group of typical brown conglomerates, purple mudstones and sandstones. Next comes a thick group of pale quartzose conglomerates and sandstones, followed by an Upper group of red sandstones and conglomerates. Between the second and third groups a set of red tuffs occurs which does not appear to have been hitherto noticed. But the detailed structure of the Old Red Sandstone of Arran has still to be mapped.

Permian. The age of the red sandstones which extend along the eastern shore of Arran from Corrie to Brodick and thence across the southern half of the island, underneath the various sheets of eruptive rocks, has been much discussed. By Sedgwick and Murchison these strata were classed as New Red Sandstone, a view that was subsequently adopted also by Ramsay. Afterwards, however, Bryce and other writers placed them in the Carboniferous system and correlated them with the red sandstones of the north of Ayrshire and Renfrewshire. A re-examination of the ground was made by me last spring in company with Mr. Peach and Mr. Gunn. We found that pebbles of the Carboniferous Limestone with its characteristic fossils actually occur in the breccias at the base of these red sandstones between Corrie and the north end of Arran, as was first observed some years ago by Mr. James Thomson. Closer inspection of the coast-sections and of the interior showed us that, besides this evidence of a decided stratigraphical break, the red sandstone, conglomerates and breccias lie unconformably on the Carboniferous formations, though at the actual junctions the two series seem almost conformable.

It was thus manifest that these red sandstones could not be Lower Carboniferous, as had been supposed, but must be later than the Carboniferous Limestone series. North of Corrie they rest on the uppermost members of the limestone series or the base of the Millstone Grit. In the interior, at the head of Banlister Glen, they lie on the Corrie Limestone hundreds of feet lower down in the Carboniferous system, while on the west coast at the mouth of the Machrie Water, they appear to come directly down upon the Old Red Sandstone, the whole of the Carboniferous formations having there disappeared. These upper unconformable, and overlapping red strata may be divided into two fairly well-marked sections, a lower group consisting of massive false-bedded sandstones varying from a bright brick-red colour to tints of yellow or grey, and an upper group of red marls, and shales, containing thin sandstones and occasional thin seams of nodular limestone. The upper division extends through all the southern and a part of the western district of Arran from Dippin round to beyond Drumadoon. No decisive evidence has yet been obtained to fix the geological age of this series of red strata. That they are probably Permian may be inferred on two grounds. In the first place the lower group of false-bedded brick-red sandstones presents the closest resemblance to the red sandstones which, within sight on the opposite mainland of Ayrshire, rest upon the Coal-measures, and have been referred to the Permian period. In like manner, they resemble the red sandstones of the south of Ayrshire, Wigtonshire, and Dumfries-shire, which are also assigned to the same period. In the second place the Arran red sandstones have been found by Mr. Gunn to enclose a contemporaneous volcanic group, a feature which is specially characteristic of the Permian series of the centre of Ayrshire, and of Nithsdale. This officer has discovered at the head of the Sliddery Water a group of dull red slaggy lavas, and red tuffs intercalated among the newer red sandstones. The tuffs which greatly predominate are nearly all red or purple, and vary from fine muds to coarse agglomerates. They include two bands of sandstone, and shale among the fallen debris of one of which a large, and fine specimen of *Stigmaria* was found; and other fossils will probably reward further search. Mr. Kidston, to whom this plant was referred, believes it to be either Carboniferous or Permian. The occurrence of *Stigmaria* in a volcanic series which lies some hundreds of feet above the base of the red sandstones seems to remove these strata from the New Red Sandstone or Trias, while the strong lithological resemblance which, both as regards their sedimentary and volcanic components, they present to the Permian series of the mainland opposite, renders it highly probable that they are Permian.

An important corollary follows from this deduction. It has long been known that the southern portion of Arran abounds in intrusive igneous rocks. No definite conclusion as to the age of these intrusions has yet been reached. The ascription of the surrounding red sandstones, and marls to the Carboniferous system led to the igneous masses being looked upon as later than the lower parts of that system. But no evidence was obtained that could be regarded as decisive against the supposition that the intrusions might belong to a later part of the Carboniferous period. The granite of the northern half of Arran has been shown to possess so many petrographical resemblances to the granophyres of the Inner Hebrides, and to the granites and granophyres of the Mourne Mountains and Carlingford in Ireland, that geologists are now quite disposed to regard it as of Tertiary age. Their inclination to place it in so late a geological period will be considerably strengthened by the evidence now adduced as to the Permian age of the newer red sandstones and marls. Not only so, but the extraordinarily abundant and complex group of igneous rocks in the southern half of the island acquires an additional interest when it can be shown to be post-Permian. These rocks will be further referred to immediately.

Triassic.

In the district of Applecross, on the west coast of Ross-shire, Mr. Woodward has during the year surveyed a small outlier of Jurassic rocks with a thin development of Triassic strata underlying them. Provisional lines were drawn on the maps for the insertion of passage-beds there, which may represent the Rhætic formation. But no traces of any of the characteristic fossils of that formation were obtained.

Jurassic.

The coast of Skye, from the north of Loch Sligachan northwards to Lonfearn beyond Portree, exposes strata that range from the Middle Lias to the Great Oolite series. These present a general similarity to the corresponding formations of Raasay which were previously surveyed. But the iron-ore noted in my last report has not been found among them. Mr. Woodward has mapped separately in Skye as he did in Raasay, the passage-beds between the Upper Lias and the Inferior Oolite, which include shaly layers, and bands and concretionary masses of calcareous sandstone. These strata in Raasay yielded *Ammonites variabilis*; while in Skye they have afforded a form identified by Messrs. Sharman and Newton as *Ammonites Siemensi* indicative of the zone of *A. jurensis*. *A. Murchisonæ* occurs in the lower part of the Inferior Oolite, and many examples of *A. humphriesianus*, and other fossils, not yet determined, have been obtained from the fine cliffs between Bearreraig Bay, and Invertote The upper portion of the Inferior Oolite does not appear to be fossiliferous on this Skye coast. It contains some shaly, and lignitic bands, and concretionary masses of sandstone, differing to some extent from the mass of white sandstones so prominent on this platform in the eastern cliffs of Raasay. The Great Oolite series comprises shales with bands of "beef" (fibrous carbonate of lime) and layers of compact limestone, sometimes oolitic, and of sandstone. Many of the strata are crowded with fossils. In the Applecross outlier, the oolitic structure of some of the Lias limestones is strongly marked, a feature of some interest in connection with the associated bands of coral rock.

Tertiary

While surveying the Jurassic formations along the east coast of Skye, Mr. Woodward has also traced on the maps the margins of the Tertiary igneous masses which intersect and overlie the Secondary strata. He has noted the position of certain thin and not persistent layers of lignite of Tertiary age interstratified among the lavas and volcanic tuffs and agglomerates of the Braes and near Portree. The accessible parts of these deposits have for the most part been dug away for fuel by the fishermen. But he has also found closely adjoining lignitic bands in the underlying Jurassic strata. None of these carbonaceous layers are of any economic importance.

For the reasons already adduced in connexion with the age of the newer red sandstones and marls of the south half of Arran, there is good ground for regarding the complex series of intrusive rocks in that part of the island as probably of Tertiary age. As they must be later than these sandstones and marls which are with probability referred to the Permian period, as there is no Secondary group of igneous rocks known in this country and hardly any throughout Europe, and lastly as they present so many features of lithological resemblance to known Tertiary rocks, these intrusive masses may with some confidence be assigned to so late a geological date. The igneous rocks of the south of Arran, later than the younger red sandstones, so far as we yet know, are intrusive and occupy a large part of the whole surface. They range from acid to basic in composition. The acid varieties include two principal types—coarse-grained quartz-porphyry seen at Drumadoon, Brown Head, Benan Head, and in many parts of the interior, and fine-grained felsite, sometimes porphyritic and quartziferous. The latter is the newer rock, as it pierces the former both in dykes and sills.

Accompanying the quartz-porphyry of Drumadoon, and Benan, there is a mass of basic rock which forms a kind of fringe or selvage round it sometimes with what appears to be a rock of intermediate character between them. West of Whiting Bay most of the intrusive sheets are of acid material, but south of Glen Ashdale the sills are almost entirely basic.

The numerous basalt and dolerite dykes, for which the south end of Arran has long been celebrated, have a general northerly trend and appear to be all of the same or nearly the same age. They undoubtedly cut through the quartz-porphyries and the coarse-grained basic sills, but are less numerously visible in the finer-grained basic sills, while in the felsite sheets they are seldom to be seen. In several places dykes running in an east-north-east direction cut the others and are therefore of later date.

The Tertiary dykes of Skye are now being mapped both on the north-east and south-east coasts. In the latter area Mr. Clough find them to vary petrographically between the two extremes of pitchstone on the one side and troctolite on the other. Those of acid or intermediate character on the coast north of Loch na Daal often indicate the direction of flow of the molten rock in the fissure, by the elongation of the amygdales and the orientation of the rows of spherulites. From the variation in the positions of these structural lines, it is clear that the movement of the lava was by no means always vertical but was often approximately horizontal or oscillating between the two directions. Records of the variations observed are being kept by Mr Clough.

Drift and Glaciation.

The mapping of the traces of glaciers and ice-sheets in the Highlands proceeds simultaneously with that of the solid rocks. No important discoveries have been made in this subject during the past year. Some interesting observations, however, have been recorded by Mr Horne when surveying the mountainous tract already referred to between Loch Maree and Loch Carron. He has found that in that part of the country during the period of most intense glaciation the highest hills were overtopped with ice which, as already noted in the west of Sutherland and Ross, must have moved

Appendix E.

REPORT BY DIRECTOR GENERAL.

in a westerly direction. This march of the ice is shown by the trend of the striæ graven on the rocks and by fragments of the eastern schists, which, swept along from the interior of the country have been carried up to the highest peaks. At a later date local systems of valley-glaciers radiated from the chief mountain-groups and carried the debris of those heights to the low grounds. South of Coulin the materials in the moraine mounds seem to vary with the character of the underlying strata, much as those of the boulder clay do from district to district.

Much interest attaches to the careful research on which Mr. Bennie has been engaged for some years among the glacial deposits. Last year he was specially employed in the examination of the bed of an ancient lake of the Ice Age which has been laid open during the construction of a new line of railway about half a mile from Auchtertool in Fifeshire. The lacustrine strata, there seen to lie upon boulder-clay for a distance of about 300 yards, consist of the following members in descending order.

d. Surface soil - - - - - -	1 ft.
c. Brown earthy silt with *Lepidurus* (*Apus*) *glacialis, Salix herbacea, Betula nana* - - - - -	3 ft.
b. Marl with *Lymnaea, Pisidium,* &c. - - -	1 ft. 6 in.
a. Running sand or mud - - - - -	4 or 5 ft.

The chief interest in this section centres in the bed of brown silt with its characteristic organisms. The plants preserved in it include, besides many seeds not yet determined, the Arctic willow and birch, and with these are associated great numbers of the remains of a little crustacean (*Lepidurus* or *Apus*) which is now confined as a living form, to the freshwater pools of Spitzbergen and Greenland, only thawed during the brief summers of those Arctic lands. It is manifest that this lake in Fife was silted up or drained at a time when an arctic climate still reigned over Scotland.

Petrographical work.

In addition to the researches on the Lewisian Gneiss above referred to, Mr. Teall has been engaged upon the study of other crystalline rocks sent up to him by the officers in the field from various parts of the mainland. Among these was a remarkable series of exceptional petrographical types from the Lewisian Gneiss of Ross-shire (Sheet 92) including limestone, dolomites, cherty carbonates, quartz-magnetite-schists, quartz-schists and quartz-hornblende-schists. They evidently belong to the group of rocks of somewhat doubtful origin, previously recognised in the Loch Maree district. Among the other petrographical types determined by Mr. Teall from various districts in Scotland, are sillimanite-gneiss and quartz-sillimanite aggregates (faser-kiesel) from eastern Sutherlandshire (Sheet 109). Omphacite-hornblende rocks and omphacite-scapolite rocks from the neighbourhood of Farr (Sheet 115). Sceyelite from a point 2½ miles south-east of Borgie Bridge (Sheet 115), and chloritoid schists from Friar Glen Burn, Kincardineshire (Sheet 66).

Numerous examples of felspathic amphibolites or epidiorites have been examined during the year, including an interesting series from Argyleshire (Sheet 20). These rocks agree with diorite in composition in that they consist mainly of a plaghoclase felspar and hornblende, but they differ from that rock in structure and also in the frequent occurrence of epidote or zoisite as an important accessory. They are associated with hornblende-schists, and often pass into them by imperceptible gradations. Similar rocks in other localities are known to graduate into *normal* basic igneous products, such as gabbro, or dolerite, out of which they are supposed to have been formed by metamorphic processes. It seems reasonable to infer a similar origin for the rocks in question, although a gradual transition into pyroxene-bearing igneous masses has not been observed among them.

Extra-official publications by the staff.

During the past year the following Memoirs and Papers by members of the Geological Survey of Scotland have been published :—"Additions to the Fauna "of the Olenellus-zone of the North-west Highlands" by Mr. B. N. Peach, *Quart. Journ. Geol. Soc.*, Vol. L., p. 661. "On two Volcanic Necks in Applecross," by Mr. Horne, *Trans. Geol. Soc. Edin.*, also by the same author in the same volume, "On the intercrossing of Boulders in Applecross mountains." Mr. Goodchild has contributed the following papers :—"Augen-structure and the Metamorphic rocks," *Geological Magazine;* "Notes on Carboniferous Lamellibranchs," *Proc. Roy. Phys. Soc. Edinburgh;* and "Astronomical models in

Edinburgh Museum of Science and Art," *Scottish Geographical Magazine*. Mr Greenly has published a paper on "A Triassic Land-surface" in the *Trans. Geol. Soc., Edinburgh*; and Mr Bennie one with the title "Remarks on two "transverse sections of Carboniferous wood from Baberton Quarry, Mid-"lothian," *Proc. Roy. Phys. Soc., Edinburgh*.

IRELAND.

A. *General Statistics.*

Field-work.

Satisfactory progress continues to be made in the revision work on which the small staff now retained in Ireland is engaged. The examination of the crystalline schists and eruptive rocks together with the fossiliferous Silurian strata in the West of Mayo and Galway has been prosecuted by Messrs. Kilroe and McHenry in continuation of their work of previous years, and the task is now approaching completion. Mr. Kilroe has revised an area of 98 square miles in these two counties, and has traced 117½ miles of new boundary lines. Mr. McHenry has been engaged entirely in Galway where he has revised a tract of 119 square miles, with 27 miles of coast line, and has traced 105¼ miles of new boundary-lines. The ground covered by the revision of last year extends to the west of a line drawn from Westport on the north to Oughterard on the south.

In county Down Mr. Egan has been engaged in a detailed examination of the Silurian area, with the view of obtaining fresh data for tracing the subdivisions of the Silurian rocks. In order to facilitate and expedite this work in the north-east of Ireland the Collector Mr. R. Clark was instructed to proceed in May to county Louth and to resume there the search for fossils, which was referred to in my last Report as having led to important results. He succeeded in making a collection of 743 fossils from about 25 distinct localities, eight of which had not previously been recorded as fossiliferous. In the south-east of Louth (Sheet 82) rocks hitherto thought to be barren of organic remains have yielded a fine collection of Llandovery fossils.

With a view to the greater accuracy and rapidity of the revision of the Silurian tracts of the north-east of Ireland, I requested Mr. B. N. Peach, who has had charge of the Silurian work in the south of Scotland, to meet me in Dublin last spring, and to make there an examination of the large collection of fossils accumulated during the previous year from the Counties of Down and Armagh, as stated in my last Report. Mr. Peach's intimate acquaintance with the fossils of the different Silurian zones enabled him rapidly to name the Irish fossils, and to furnish the officers of the Survey in Ireland with the clue to the recognition of the stratigraphical horizons among the Silurian formations in the field. In order still further to assist the revision in Ireland, I spent a day or two on the coast of County Down with Messrs. Peach, Egan, and Clark, when the successive Silurian zones were studied on the ground.

Professor Sollas has been engaged in an examination of the district of Carlingford and Forkhill, especially for the purpose of studying the igneous rocks. During his traverses he was assisted by the Collector, who obtained at that time a series of 250 specimens illustrative of the rocks of Carlingford and Slieve Gullion.

Owing to the reduction of the Travelling Vote for the Irish branch of the Survey in the Parliamentary Estimates for 1894–95, it was impossible to continue the field-work during the last quarter of the year. I was reluctantly compelled to bring all the officers into the Dublin Office at the beginning of October, and to leave unfinished several areas, which I had hoped would be completed last year.

Maps.

Duplicate copies of the following six-inch field-maps have been made, and are deposited in the Dublin Office for reference by the public:—

Down.—Parts of Sheets 44, 45, 46, 47, 48, 53, 54 and 55.

Fermanagh.—Sheets 12 and 14, and parts of Sheets 2, 5, 6, 10, 11, 13, 15 and 16.

Leitrim.—Sheets 24, 25, 28 and 29, and parts of Sheets 4, 7, 11, 17, 18, 21, 27, 30, 31 and 36.

One sheet of Horizontal Sections (No. 35) has been published. It illustrates the structure of the county of Donegal from Rathmelton, north-westwards to the Atlantic Ocean and from Milford to Horn Head.

No field-work being possible in Ireland during the last quarter of the year for the reason already given, I employed the Staff in reducing the Survey work on the general Map of Ireland on the scale of four miles to an inch. This map, like that in course of completion for England and Wales, will be of great service as a general map of the island and as an Index to the more detailed series of one-inch Maps of the Geological Survey.

Petrographical work.

Professor Sollas has completed an examination of the rocks of the Carnsore district (S.E. coast of County Wexford) and has prepared a report upon them for publication. He has likewise begun the study of the Carlingford specimens above referred to. He is still engaged upon the investigation of the metamorphic and other rocks of Galway, and has studied and described 50 microscopic slides made from them. The ophitic limestones of that region are now under examination by him and he has made a complete mechanical separation of their component minerals in the case of six examples. Of the Carlingford rocks he has already made seven complete chemical analyses.

Geological Survey Collection in the new Museum.

The Handbook to the Geological Survey Collections in the Dublin Museum of Science and Art is now in the press. Its preparation was delayed during the past year in the endeavour to make the book still more complete. In its final form as published it will, I trust, be found to be not merely a convenient guide so the galleries of the Museum, but a useful compendium of Irish Geology. It has been prepared by Mr. Watts, with the collaboration of Mr. McHenry.

During last year the type specimens of fossils in the Survey Collection were re-mounted and handed over to the Director of the Museum to be deposited by him in the series of "Type Specimens" which he has placed together. The collection of graptolites has been re-arranged and brought up to the present state of knowledge. From the large series of specimens of graptolites recently collected in County Down a selection has been mounted on 100 tablets illustrative of the successive zones in the Silurian System. These additions have been placed in the Museum.

Three large cases of fish and reptilian remains from the Castlecomer Coal-field have been mounted in cement.

Inquiries for Geological information.

The Dublin Office continues to be constantly applied to by the public for information on questions of practical geology. Among the questions on which applications for assistance have been received, both personal and by letter, the following may be mentioned:—Coal-mining in counties Cavan, Derry, and Tyrone; the occurrence of barytes and bauxite; the oil-shales of Ballycastle; the pottery-clays of Bann; the alum-shales of Clare and Kerry; the steatite of Donegal and Mayo; and the occurrence of chert for manufacturing purposes. Advice has likewise been given in regard to the water-supply in Dublin and Queen's County, with a view in the latter case to the needs of the town of Maryborough. Information has also been supplied in answer to inquiries respecting the position, extent and economic applications of the peat-bogs of Ireland; building and ornamental stones; and in particular the mineral resources of Achill Island.

B.—*Record of Geological Work.*

Metamorphic rocks.

In pursuance of the work described in my last two Reports Messrs. Kilroe and McHenry have during the past year advanced over a large tract of the difficult ground between Clew Bay and a line drawn from Clifden to Oughterard. I have myself visited them on the ground and have examined a number of the sections on which they place most reliance as affording a key to the structure of the ground. The investigation is not yet completed and it is perhaps premature to pronounce confidentially as to the results that will be obtained from it. But it appears to me that Mr. Kilroe has now definitely proved that the Croagh Patrick quartzite and its equivalent further south does not belong to the "Dalradian" series but is a part of the Llandovery formation. It will thus be necessary to colour as ordinary Silurian a considerable tract of ground which has hitherto been regarded as composed of metamorphosed rocks. The rocks have undergone a certain amount of metamorphism but never enough to destroy the clear evidence of their original clastic character.

South of the Silurian tract in the district known as Joyce's Country the Silurian rocks have long been known to lie with a violent unconformability upon a group of crystalline schists which there can be no doubt are a continuation of the "Dalradian" series of the north-western counties. It remains to examine in further detail the alteration undergone by the Silurian strata and the structure of the mountainous ground around Killery Harbour.

The investigation by Mr. McHenry of the tract of ground between Clifden and Oughterard has resulted in the collection of a body of evidence which disproves the existence of any Archæan rocks, at least within the area examined. What have been supposed to be rocks of that early age are now ascertained to consist of a complex series of intrusive masses which have pierced the schists, limestones and quartzites of southern Connemara. Mr. McHenry's survey during last year in that region has convinced him that the whole of these rocks, igneous and sedimentary, are the equivalents in age and petrographical character of the eruptive and metamorphic Dalradian rocks of Mayo, Sligo, Leitrim, Donegal, and other parts of Ireland.

Silurian rocks on the flanks of the schists.

Early in March I took the opportunity to make with Mr. Peach and Mr. McHenry an examination of some of the ground around Pomeroy in Tyrone where there seemed reason to believe that evidence might be found of the occurrence of a marginal strip of Lower Silurian rocks like those which have now been found to flank the southern border of the Scottish Highlands. On a former occasion I had seen these rocks and observed among them a remarkable group of basic lavas and tuffs, but could see no evidence to warrant their separation from the chloritic schists to the north of them. Recent mapping along the borders of the Scottish Highlands, however, having shown that a similar group of rocks in that region could be recognised as probably of Lower Silurian age, it seemed desirable that the Tyrone district should be re-examined. The result has been so far highly satisfactory. In company with Mr. Peach, who has also visited the Scottish localities, I spent some days in traversing the Tyrone sections, and had no difficulty in recognising the close similarity of the rocks there exposed to those along the Highland border. The igneous rocks form a strip of country about 24 miles long with a maximum of nine miles in breadth, lying between the Silurian and Old Red Sandstone rocks on the south, and the crystalline schists on the north. They include diabase and porphyrite lavas, tuffs and intrusive sheets. The lavas are interleaved with cherts and jaspers exactly like those associated with the igneous rocks at the edge of the Highlands. Apparently overlying the volcanic masses come dark shales, which might yield graptolites, likewise pale grits and occasional thin limestones. In Scotland the cherts enclose *Radiolaria*, and though these organisms were not detected in any of the Tyrone sections on the occasion of the visit of Mr. Peach, Mr. McHenry, and myself, it may be confidently anticipated that they will be found on further and more detailed search. The radiolarian cherts of the Highland border with their lavas and tuffs appear to be a prolongation of those which with the same characters lie in the Arenig formation of southern Scotland, where they extend over a wide area. The importance of the discovery of a zone of Arenig rocks along the edge of the schists in the Highlands and in the north of Ireland will be obvious to all those who have followed the discussion regarding the structure and age of these crystalline schists.

Fossil-work.

In addition to the large collection of fossils already referred to as having been made in the field last year, the collector, Mr. Clark, has at my request undertaken the preparation of a list of all the fossils collected by the Survey from the Silurian Rocks in the centre and south of Ireland. When this list is completed it will form the basis for a revision of all the detached Silurian areas which over so large a part of Ireland rise as cores in the heart of the hill-ranges.

Petrography.

While engaged in the preparation of the Handbook of the Survey Collections Mr. Watts had occasion to make many critical examinations of the rocks in the cases. Among the new facts which this investigation has established the following may be noticed here:—The wide extent of lamprophyres in the north of Ireland; the occurrence of perlitic cracks in the quartz of the Tardree rhyolite; the remarkable replacement of olivine by tremolite which eventually developes into idiomorphic crystals in the picrite of Glendalough; the intergrowth of biotite and hornblende in the Crossdoney granite, and the contact metamorphism around that rock.

Professor Sollas, as the result of his examination of the igneous rocks of the Carlingford and Forkhill district, has satisfied himself that the alleged transitions from one kind of rock to another in that area do not exist, and that tracts which have been mapped as Lower Silurian consist really of igneous rocks which sometimes enclose fragments of Silurian strata.

Among the pebbles in the Drift of the east of Ireland, pieces of a granophyre, with the mineral riebeckite, are not infrequent. Professor Sollas has been fortunate in finding for the first time one of these pebbles which contains true crystals of the mineral. He has found them to posess well-developed faces, and has been able to measure and describe them.

During the past year Professer Sollas has communicated to learned societies the following papers :—"The Volcanic District of Carlingford, and Slieve Gul-"lion, Part I. On the relations of the granite, and gabbro of Barnavave," *Trans. Royal Irish Acad.*, Vol. XXX., p. 477. "The Geology of Torres Straits" (in conjunction with Professors Haddon, and Cole), *Trans. Royal Irish Acad.*, Vol. XXX., p. 419. On "Pucksia MacHenryi a new fossil from the Cam-"brian rocks of Howth, *Scientific Proc. Roy. Dublin Soc.*, Vol. VIII., part XXXVIII. "A walk along the glacial cliffs of Killiney Bay," *Irish Naturalist*, Vol. III., p. 13. "Notes on Glacial Deposits in Ireland" (in conjunction with R. L. Praeger), *Irish Naturalist*, Vol. III., p. 166.

II. PALÆONTOLOGICAL DEPARTMENT, JERMYN STREET MUSEUM.

Messrs. Sharman and Newton the Palæontologists, and Curators of fossils report to me that the Collection of fossils exhibited in the Museum has been increased by numerous specimens, some obtained by purchase, and others collected by the officers of the Survey. The series of Carboniferous Limestone, and Coal measure plants contained in the cases, has undergone a thorough revision, the nomenclature being brought up to date, while a number of new specimens has been added to the collection exhibited. A similar revision and augmentation of the series of Old Red Sandstone fishes, has been accomplished. The Wall-cases of the east side of the lower gallery, numbered X. to XVII., containing Devonian, Carboniferous Limestone, Coal-measure, and Permian fossils, have been wholly re-arranged. The fine series of Coal-measure plants is now shewn to greater advantage than hitherto ; while the Palæozoic vertebrata are placed in the recesses of this side of the gallery. By this arrangement all the vertebrate fossils in the museum are now contained in the recess-cases of the two galleries. Many of the specimens have been remounted, and a manuscript catalogue has been prepared.

A series of 215 specimens of Pleistocene mammalian remains, forming part of the Spurrell Collection, from the Brick-earth of Crayford, presented by Mr. F. C. J. Spurrell of Belvedere, has been named and incorporated with the Museum collection. Many of the specimens needed considerable repair, and all have been mended, cleaned and treated with gelatine. This series is especially interesting as containing many foot-bones of Elephant, Rhinoceros, Horse &c., of which the Museum had previously but a meagre representation.

A numerous collection of Vertebrate remains, of Pleistocene age, chiefly small species, such as Lemmings, Voles and Mice, obtained by Mr. W. J. Lewis Abbott, from a remarkable fissure in the Kentish Rag near Ightham, Kent, has been determined by Mr. Newton who has made known the results in a paper read by him before the Geological Society, and published in their Quarterly Journal. A series of these fossils has been presented to the Museum by Mr. Abbott, and having been mounted and labelled, is now exhibited. In addition to the specimens already referred to, a number of invertebrate fossils from various horizons have been placed in the Museum.

Much cleaning and re-papering has been done in the course of the year, and the specimens in the following cases have been re-mounted and labelled, namely, Wall cases, 6, 7, 8, 9, and flat cases 26, 27, 28, containing fossils from Inferior Oolite, Great Oolite, Bradford Clay, Oxford Clay, Kellaway's Rock, and Cornbrash ; also flat cases, 6, 7, 19, 20, of the lower Gallery, containing Caradoc and Wenlock fossils.

Appendix E.

Report by Director General.

A large series of Cretaceous fossils has been collected from Devonshire and Dorsetshire by the Survey officers, with a view to the settlement of the horizons of the lower part of the Chalk and the Upper Greensand in these areas. The specimens from Devonshire have been specifically determined, and lists of them have been supplied to Mr. A. J. Jukes-Browne for his use in the preparation of the Cretaceous monograph. The Dorsetshire series is now receiving attention. Fossils collected by Mr. Lamplugh in the Isle of Man, have also been received, and it is hoped that they may give a clue to the age of strata which have been referred by some writers to the Carboniferous Limestone and by others to the Permian system. Silurian and Carboniferous fossils have been sent up for determination by Mr. Dakyns, Mr. Gibson, and Mr. Hugh Miller of the Geological Survey. Some interesting, but obscure fossils from the older rocks of Ireland have also been received from the Irish branch of the Survey. Certain Jurassic fossils have been determined for Mr. Fox-Strangways and Mr. Woodward. Specimens of fossil wood brought from Graham's Island in the Antarctic regions were submitted by Mr. Clements Markham, C.B., F.R.S., President of the Royal Geographical Society and proved on examination with the microscope to be coniferous.

Some time has been occupied by the Palæontologists in correcting parts of the proofs of Survey Memoirs passing through the press. For the illustration of these works several drawings have been prepared by Mr. W. M. Redaway, the artist, who has also made some larger drawings of fossils for exhibition in the Museum.

It has been deemed desirable to re-arrange the figures of fossils which are shown in the gallery wall-cases, as illustrations of the varions groups of plants and animals found in a fossil state. The upper gallery series of these figures has been treated in this manner, and this change has necessitated the re-mounting of several of the drawings and the addition of a few new ones, at the same time all have been taken from their frames cleaned and re-fixed. As now arranged in the upper gallery these figures form a series of Jurassic and another of Cretaceous types, ranging in each case from plants to vertebrates. The re-arrangement of the illustrations in the lower gallery will shortly be commenced.

A series of Mammalian bones from a Yorkshire barrow which is being explored by Mr. J. R. Mortimer of Driffield, has been determined by Mr. Newton, as well as a similar, but larger, collection obtained by Mr. W. J. Lewis Abbott from Neolithic deposits near Hastings. The results of both these explorations will, it is hoped, be shortly published.

The Cretaceous and Tertiary fossils which for want of room in the Museum cases, have accumulated in the private rooms of the department, have been arranged and rendered more accessible.

Many students continue to make use of the Museum collections, and the number of enquiries on palæontological matters increases. Those at work on special subjects, and requiring to make a close study of the specimens, have been accommodated as far as possible in the private rooms of the department.

The extensive series of figured or type specimens included in the collection of fossils is continually growing. During the past year the following specimens have been described and figures of them have been published. *Lepidodendron longifolium* from the Coal Measures, in the Trans. Roy. Soc. Edin., Vol. 37, by Mr. R. Kidston. *Slimonia* and *Pterygotus bilobus* from the Ludlow, by Mr. Malcolm Laurie, also in the Trans. Roy. Soc. Edin., Vol. 37. *Carbonicola rugosa* from the Coal Measures, by Dr. Wheelton Hind, in the Palæontographical Society's Volume for 1894; and in the same publication, *Neritopsis lævigata*, *Delphinula Santonensis* and *Trochus bijugatus* from the Inferior Oolite, by Mr. W. H. Hudleston; *Pholadomya? Richardsi* and *Nucula? Keuperina* from the Trias, by Mr. R. B. Newton, in the Journal of Conchology.

The second memoir by Mr. E. T. Newton on the Reptiles of the Elgin Sandstone referred to in my last Report has been published in the Phil. Trans. Roy. Soc., Vol. 185 B, p. 573, with four plates. The gutta-percha casts from which all the figures of *Erpetosuchus Granti* were taken, and those from which the figures of the trunk and limb-bones of *Ornithosuchus Woodwardi* were made, are now exhibited in the Museum. An account of the Vertebrata from the

"Ightham Fissure" has been published by Mr. Newton in the Quart. Journ. Geol Soc., Vol. 50, p. 171.

The fossils which have been presented to the Museum during the year are enumerated in the general list of donations; but attention may be specially directed to the series of Mammalian remains from Crayford, and to those from the Ightham Fissure.

III.—Museum of Practical Geology, Jermyn Street.

Mr. Rudler, the Curator and Librarian of this Museum, reports to me that during the past year the number of visitors to the Museum, in the mornings was 30,848, and in the evenings 14,656, making a total of 45,504. During the preceding year the total number was 42,241, and there was consequently an increase last year of 3,263.

Ever since the opening of the Museum in 1851, it has been the practice to close the building to the public on Fridays, in order to facilitate the arrangements for cleaning. It has, however, been a matter of serious consideration for some time past whether it would not be possible to remove this restriction. Arrangements have accordingly been made for this purpose and the Museum is now open on every week-day. As the new regulation did not come into operation until the close of last year, it is at present impossible to determine what effect it may have on the number of admissions.

Considerable improvement has recently been effected in the arrangement of the building and ornamental stones in the Hall of the Museum. Much space has been gained by the removal of certain geological models from the Hall to the Model Rooms, and this space has been utilised for the better display of many of the larger objects; several massive specimens, formerly on the floor, being now mounted on pedestals. A new case has been erected for the reception of fissile stones such as the micaceous sandstones used as flagstones, and the so-called roofing "slates" of Stonesfield and Collyweston; whilst a new table-case has been introduced for the accommodation of the collection illustrating the manufacture and uses of cements.

An attempt has been made to form a collection of the principal bricks made in this country, showing in each case samples of the clay, or clays employed in the manufacture. Some cases in one of the Galleries of the Model Rooms have been appropriated to a series of such specimens, obtained chiefly from the Building Trades' Exhibition of last year; and it is believed that this collection will rapidly expand.

A range of new glass-cases has been fitted up in the gallery of the eastern Model Room for the display of a large collection of mineral phosphates, used in the preparation of manures, and collected and presented by Mr. Hoyer Millar.

Twenty geological photographs, by Mr. A. Strahan of the Geological Survey, have been mounted, with explanatory keys, and exhibited in the upper gallery of the Museum. Several bold geological sections, illustrating the more interesting of the deep borings in the south-east of England, have recently been prepared, and will shortly be mounted in the Petrographical Gallery.

The handbook to the Museum mentioned in last year's Report as being then in preparation, has since been completed.

A list of donations to the Museum, during 1894, is appended hereto. It may be added that the Library of the Geological Survey has been enriched by a large and valuable series of geological pamphlets, collected and classified by the late Mr. William Topley, and presented by his widow.

Increasing use continues to be made of the Museum, principally on Saturday afternoons, by parties from Working Men's Clubs, Natural History Societies, and other educational organizations. Among the associations which have lately visited the Museum, under the guidance of the Curator, may be mentioned the Ealing Natural History Society, the Haslemere Natural History Society, the Hotspur Working Men's Club, the Lambeth Field Club, the Limehouse Science Classes, the Minet Library Club, the Morley College Natural History Club, the People's Palace Rambling Club, the Toynbee Hall

Appendix E.

REPORT BY DIRECTOR GENERAL.

Classes, the University Hall Rambling Club, the Westminster Technical Institute Students' Association, and the Woolwich Mechanics' Institution.

The Theatre of the Museum has been used during the past year for the delivery of three courses of Monday evening lectures to Working Men, in connexion with the Royal College of Science. The first of these courses was by Professor Farmer on "Plant Structures considered in relation to their environment"; the second by Professor Thorpe on "Forms of Gas," and the third by Professor Norman Lockyer on "The Sun's Place in Nature."

The Theatre has also been used, by permission of the Lords of the Committee of Council on Education, for meetings of the Royal Historical Society, the Royal Statistical Society, the Institution of Mining and Metallurgy, and the British Economic Association.

Daily applications continue to be made at the Museum for information on minerals, mines, and other practical applications of mineralogy and geology. Requests for assistance are likewise received from Colonial Governments; among those of last year were applications from the Governors of British Honduras and the Gold Coast.

The following tabular statements and lists are appended to this Report :—

I. Table showing distribution of the field-work in England and Wales.
II. Do. the distribution of field-work in Scotland.
III. Do. abstract of work in Scotland.
IV. A return of maps and other Survey publications issued to Government agents for sale.
V. List of Donations to the Museum of Practical Geology.

I have the honour to be,
Sir,
Your obedient servant,
ARCH. GEIKIE,
Director-General.

The Secretary,
Science and Art Department,
South Kensington, S.W.

V.

LIST OF DONATIONS TO THE MUSEUM OF PRACTICAL GEOLOGY.

ABBOTT, Dr. G.—A specimen of Iron, partially smelted, from Sussex Iron Ore; found near Tunbridge Wells.

ABBOTT, W. J. L., Esq., F.G.S.—A specimen of *Proherodius Oweni* (bone) from the London Clay at the Admiralty, St. James's Park; a series of vertebrate remains, illustrating 27 species, from the Kentish Rag near Ightham, Kent; a specimen of Tunbridge Wells Sand; and a sample of rock from Groby, Leicestershire.

BEER FREESTONE Co., Ltd.—A six-inch Cube of Building Stone from Beer Quarries, near Seaton, Devon.

BELINFANTE, L. L., Esq., B.Sc.—Seven specimens of *Petraia* from the Lower Devonian, and one of *Athyris* from the Middle Devonian of Hope's Nose Torquay.

BRINE, VICE-ADMIRAL LINDESAY.—Specimens of Lava and Volcanic Ash collected from the island of Aphroessa, Bay of Santorin, in Feb., 1866.

BRITISH CLAY WORKER, THE EDITOR OF.—A collection of Bricks and of the Clays used in their manufacture.

CAITHNESS FLAGSTONE Co., Ltd.—Two large Slabs of stone from the Company's Quarries near Thurso.

CANDY AND Co., Messrs.—Lignite in the form of a tree stem from Bovey Tracey, Devon.

COLLINETTE, A., Esq.—Two specimens of Mica Trap from Guernsey.

CORNER, Dr. F.—A Palæolithic Flint Implement from Leytonstone, Essex; a sample of Rock Asphaltum from the Pitch Lake, Trinidad; four Sponges in Flint from the Drift of Plaistow; a specimen of *Sphenotrochus intermedius*, one of *Eulima polita*, and six of *Cytherea rudis* from the Red Crag of Walton-on-the-Naze; a specimen of *Halacopsis lavis* from the London Clay; and a portion of a lower jaw of a Fox, from Banwell Cave.

CUNNINGTON, W., Esq.—A specimen of *Spirifera disjuncta* from the Devonian, and one of *Carterella cylindrica* from the Upper Greensand of Pewsey, Wilts.

DANIELS, T. B., Esq.—Samples of Diorite and altered rocks from Brazil Wood, Charnwood Forest.

DONALD, Miss JANE.—Four Casts of type specimens of *Murchisonia.*

DUDGEON, P., Esq.—A sample of Mispickel from Palnure Burn, near Newton Stewart, N.B.

FRANCIS, J., Esq.—Specimens of Lower Greensand and Devonian rocks from the deep borings at Turnford, near Cheshunt.

FULLER, H. W., Esq.—A Crustacean, from the Portland Beds (?) of Weymouth, and a pebble containing a Sponge.

GILLETT, G., Esq.—A specimen of Great Oolite (Dagham Stone).

Appendix E.
—
Report by
Director
General.

Green, Prof. A. H., M.A., F.R.S.—A series of specimens from the London Clay of Lane End, near West Wycombe, and a section of *Favosites Hisingeri* from the Wenlock Limestone.

Greenhill, J. E., Esq.—A Palæolithic Flint Implement from an excavation in Jermyn Street, St. James's, S.W.

Hadow, G. E., Esq.—Specimen of Cornbrash from near Cirencester.

Harvey, B., Esq.—A specimen of Opal from Hungary.

Herries, R. S., Esq., M.A.—Three Belemnites from the Lias of Yorkshire.

Hind, Dr. Wheelton, F.G.S.—Three specimens of *Carbonicola nucularis*, four of *C. aquilina*, one of *C. antiqua*, and nine Casts of Carbonicolas figured by the Palæontographical Society.

Kennard, A. S., Esq.—Specimens of Teeth of *Microtus ratticeps* from the Brick-earth of Crayford.

Kitto, B., Esq., F.G.S.—Samples of Uranium Ore, and three preparations of Uranium Oxide from the Uranium Mines, Cornwall.

Knapp, A., Esq.—A Japanese Metal Mirror in pocket case; work of last century.

Leake, W. M., Esq.—A Quartzite Boulder from the Chalk.

Leeson, Dr. J. R.—Thirteen specimens of Reindeer, Bison, *Cervus* and *Bos* remains from the Gravels near the Thames at Twickenham.

Le Grand and Sutcliff, Messrs.—Six fragments of Cores containing Mollusca from a boring at Tunbridge Wells.

Mackenzie, Sir James D.—A specimen of Felsite from Narborough, Leicestershire.

McLea, Miss.—Rock specimens from Guernsey and Sark.

Mactear, J., Esq., F.G.S.—Native Calomel from the Avala Mines, Servia.

Mitchell, J., Esq.—Specimens of Mica from Villeneuvre, Prov. of Quebec.

Neate, P. J., Esq.—Two varieties of White Marble from South Africa.

Oldham, R. D., Esq., F.G.S.—Specimens of Permian Breccia from Worcestershire.

Pass, A. C., Esq.—A crystallized Residue from the eliquation of several hundred tons of metal (chiefly lead) at the Bedminster Smelting Works, Bristol.

Ransome, F., Esq.—A sample of Mount Sorrel Granite, polished.

Reid, J., Esq.—Five specimens of *Palæospondylus Gunni*, ten of *Psilophyton* and one of *Anarthrocanna*, from the Old Red Sandstone of Caithness.

Richards, P., Esq.—A sample of Keuper Sandstone.

Rising, A. C., Esq.—A specimen of Tinstone from Weekes Mine, Chagford, Devon.

Savin, A. C., Esq.—Three Teeth of *Corax affinis* from the Chalk of Norwich.

Sinclair, W. F., Esq.—An Agate Gun Flint, collected in use from Bombay; also an English Gun Flint.

Spurrell, F. C. J., Esq., F.G.S.—A series of Pleistocene Mammalia from Crayford and Erith, and specimens of Mollusca, plants and microscopic sections of wood from the Peat Bed of the Thames at Crossness.

Steet, Dr. G. C.—A specimen of Geyserite from the Pink Terrace, Tauranga Co., New Zealand

Streatfield, H. S., Esq., F.G.S.—A hollow cylindrical Core of Salt from a bore-hole at Ryhope Colliery, Durham.

Talmage, Dr. J. E., F.G.S.—A polished section of nodular Variscite from Utah.

Thompson, Beeby, Esq., F.G.S., F.C.S.—Three specimens of *Posidonomya Bronni* from the Upper Lias of Northampton.

Topley, The late W., Esq., F.R.S.—Cambrian rock specimens from Shropshire.

Walford, E. A., Esq., F.G.S.—A sample of Brown Iron Ore from the Middle Lias of Hook Norton, Oxfordshire.

Walker, J. F., Esq., M.A., F.G.S.—Three specimens of *Rhynchonella ringens* from the Ammonites-concavus Zone of Corton Denham.

Warren, W., Esq.—A sample of Coal, from a seam 62 feet thick, from Tonquin, S.E. Asia; also a large specimen of Antimonite from S.E. Asia.

Wilkinson, W. F., Esq., F.G.S.—Four samples of Chromite from near Broussa, Asia Minor.

Winwood, Rev. H. H., M.A., F.G.S.—A fragment of a plicatiloid Ammonite from the Fuller's Earth of Midford.

APPENDIX F.

REPORT of the DIRECTOR of the EDINBURGH MUSEUM of SCIENCE and ART for 1894.

The year 1894 was marked by the great loss which the Museum sustained in the sudden death, on the 2nd March, of Mr. Alexander Galletly, the Curator, who, from the very beginning of the Museum in 1855, had been one of its most zealous and efficient officers. The vacancy caused by his death was filled by the appointment of Mr. David J. Vallance to the post of Curator.

Much the most important addition to the Museum collections in the course of the year was made by the acquisition, partly by gift and partly by purchase, of the rich collection of Scottish minerals formed by Professor Heddle of St. Andrews, numbering upwards of 7,000 specimens. The method in which this splendid collection was acquired was as follows :—For the sum of 1,000*l*., of which 640*l*. was provided by public subscription, towards which one gentleman contributed 500*l*., 1,000 selected specimens were purchased, while the rest of the collection was generously presented by Professor Heddle himself, under whose personal superintendence the specimens are now being arranged and incorporated with the fine collection (chiefly the gift of Mr. Patrick Dudgeon, of Cargen) previously in the Museum. The result, it is confidently expected, will be one of the finest national collections in existence of the minerals of any single country. It contains specimens of all the known species of Scottish minerals, and every mineral locality of importance in Scotland is fully represented in it. Many of the specimens are exceptionally fine in regard both to the size and to the perfection of their crystals. It comprises, moreover, the originals of nearly 600 specimens that have been analysed, and a large number of crystalline forms which have been figured and described in the "Mineralogical Magazine," the "Proceedings of the Royal Society of Edinburgh," and in other journals. Satisfactory progress has already been made with the arrangement of the collection in cases specially designed and erected for its accommodation and display. The value and interest of the collection are enhanced by its juxtaposition in the Museum to the rock specimens, fossils, maps, and photographs illustrative of the geology of Scotland, which are exhibited in the same gallery.

Among other gifts in the course of the year may be mentioned :—

Renewal series of opium alkaloids and extracts, and samples of opium, jalapine, scammonin, &c. Given by Messrs. T. and H. Smith, Edinburgh.

Woods and herbarium specimens collected by the donor in Kashmir in 1893. Given by Dr. J. E. T. Aitchison, C.I.E.

Siamese collection, comprising silver-mounted weapons, silver personal ornaments, obsolete and current money, stone celts, fire-producer, &c. Given by F. H. Smiles, Esq., Bangkok.

Native articles from Indonesia. Given by William Thomson, Esq., Edinburgh.

Native articles from the Shiré Highlands, East Africa. Given by A. Cessford, Esq., Rosewell, Midlothian.

Eskimo kayak, fully equipped, and other native objects from Lancaster Sound. Given by W. Livingstone-Learmonth, Esq., Parkhall, Polmont.

Casts were successfully taken of two of the most remarkable of the ancient monuments of Scotland, viz., the richly sculptured Runic Cross, now standing in the parish church of Ruthwell, Dumfriesshire; and the Celtic sculptured Cross-slab in the churchyard of Nigg, Ross-shire.

Among the principal purchases are the following :—

Model illustrating the application of the Leblanc process to the manufacture of carbonate of soda, and the production of other chemical substances. Scale: $\frac{1}{2}$ inch = 1 foot.

Gold enamelled and jewelled dagger. Shiraz work of the beginning of the 19th century.

Silver-gilt dessert bowl, decorated with gadroons and repoussé floral devices. English, *circa* 1771.

Appendix F.

REPORT BY DIRECTOR. EDINBURGH MUSEUM.

Reproduction in silver, parcel-gilt, of the Augsburg Butchers' Guild Cup, a work of the 16th century, now at Munich.

Pair of bronze vases, decorated with figures and open work, brought from China in 1843.

Two water-colour drawings of Edinburgh at the beginning of this century, attributed to P. Nasmyth.

Gothic casket with iron cover.

Gilt and engraved metal casket (German) with fitted drawers.

Persian painted papier-mâché tray of the Sefavean period.

Original wax medallion, in relief; portrait of Thomas Carlyle by the late Sir Edgar Boehm, Bart., R.A.

A considerable number of ethnographical objects.

Plaster casts of :—

(1) Frieze of figures, animals, &c., decorating the passage leading to a stairway on the north side of the Great Hall of Xerxes, at Persepolis.

(2) Relief representing one of the royal body-guards, from the façade of the stairway on the S.E. side of the palace of Darius at Persepolis.

(3) Relief, king stabbing a monster, from a doorway in the palace of Darius at Persepolis.

Also, upper part of the Transept Door in Beauvais Cathedral. By Jean le Pot, about the middle of the 16th century.

The additions to the Library by donation and purchase amounted to 601 volumes, exclusive of pamphlets. Among the donors were the Government of France, the authorities of the India Office, British Museum, and Science and Art Department; the British Commissioners to the Chicago Exhibition of 1893; the Smithsonian Institution, Royal Institute of British Architects, and Royal Dublin Society. The Patent Library has received the publications of H.M. Patent Office, and the United States Specifications of Patents, as issued.

In the gallery of Scottish Geology and Mineralogy, the principal work during the year has been connected with the transfer from St. Andrews, and the subsequent arrangement of the Heddle Collection already referred to.

R. MURDOCH SMITH, Maj.-Gen., R.E.,
Director.

DONATIONS to the ART and INDUSTRIAL DIVISION during the Year 1894.

THE HON. MRS. LAKE GLOAG, Edinburgh.
Dressing case of engraved ivory on sandal wood from Ceylon.
Set of chessmen in carved ivory, Chinese work.

MISS MARION MILLER, of Millerston, Miramichi, N.B.
2 small pedestals of English glazed and painted pottery.

MISS WALKER, Edinburgh.
Model Swiss chalet and carved figure of milkman brought from Interlaken in 1843.
Brazilian carved calabash, and Russian birch bark box.

MESSRS. COWAN and STRACHAN, Edinburgh.
2 cushions, showing Chantilly and Valenciennes laces in progress.

J. RITCHIE FINDLAY, ESQ., Edinburgh.
2 photographs of tombs in Dijon Cathedral.

JAMES LYLE, ESQ., Edinburgh.
2 calotypes.

MESSRS. BARRY, OSTLERE and CO., LD., Kirkcaldy.
Materials used in the manufacture of linoleum.

THE SILVINITE METAL CO., London.
Ingot, sheet, tube, and rod of silvinite.

R. MILN, ESQ., St. Andrews.
Polished block of jasper, Craiglockhart, Midlothian.

PROFESSOR M. FORSTER HEDDLE, St. Andrews.
3 slabs of serpentine from Lendalfoot, Ayrshire.

J. MAXTONE GRAHAM, ESQ., of Cultoquhey, Crieff.
Root cutting of larch grown at Monzie ; planted 1735, blown over 17 Nov. 1893.
Sections of trunk and two roots of Douglas fir, *Abies Douglasii*, planted at Cultoquhey in 1844, cut down in 1894.

T. V. WENTWORTH, ESQ., Dall House, Rannoch.
Root cutting and vertical section of Scots fir from the Black Wood of Rannoch.

MESSRS. T. and H. SMITH and CO., Blandfield Chemical Works, Edinburgh.
Series of opium alkaloids.
2 samples of Persian opium.
1 sample of Turkey opium from Salonica.
Resins of jalap and scammony, and the roots from which they are prepared.

MESSRS. T. OVENS and SONS, Leith.
Cotton seed cake made from Egyptian cotton seed.

DR. J. E. T. AITCHISON, C.I.E.
7 specimens of woods, and 9 herbarium specimens collected in Kashmir in 1893.
46 herbarium specimens per Mr. Golan, Superintendent, Seharanpore Gardens, and Mr. Duthie, Director, Botanical Department, North India.

Appendix F.

REPORT BY DIRECTOR EDINBURGH MUSEUM.

MESSRS. BURROUGHS, WELCOME and Co., London.
Box of tea "Tabioids."

MISS M. HYSLOP MAXWELL, the Grove, Dumfries.
2 photographs of *Phormium tenax* (N. Z. flax) growing at Cargen, Dumfriesshire.

REV. J. H. LAWRIE, New Hebrides Mission.
Vessel of red pottery from Santo, New Hebrides.

W. G. DICKSON, ESQ., M.D., Edinburgh.
Japanese basket for carrying fish alive.

WM. THOMSON, ESQ., Edinburgh.
Native weapons, &c., from Borneo, Celebes, &c.

ALEXR. CESSFORD, ESQ., Rosewell, Midlothian.
Native objects from East Central Africa.

W. LIVINGSTONE-LEARMONTH, ESQ., Parkhall, Polmont.
Fully equipped kayak, and other Eskimo objects from Lancaster Sound.

F. H. SMILES, ESQ., Bangkok.
Siamese Collection comprising weapons, personal ornaments, embroideries, baskets, ivory carving, obsolete and current money, stone celts, &c.

W. D. WEBSTER, ESQ., Lancaster.
Arrowhead of rock crystal from South America.

MRS. FRASER, The Manse, Nigg, Rossshire.
Bag and strap, decorated with quill-work and beads, North American Indian.

THE AUTHORITIES of DUBLIN MUSEUM OF SCIENCE AND ART.
Cast in plaster of shaft of Tuam Cross (received in 1893).

THE DEPARTMENT OF SCIENCE AND ART.
54 photographs of James Watt's models in South Kensington Museum.

KENNEDY'S PATENT WATER METER CO., LTD., Kilmarnock.
A specimen of a ¾″ water meter.

DONATIONS to the DEPARTMENT OF SCOTTISH GEOLOGY AND MINERALOGY.

MESSRS. WILSON, Aberdeen.
56 photographs of Scottish scenery.

MRS. TOD, Rosebank House, Roslin.
37 photographs of Scottish scenery.

WILBERT GOODCHILD, ESQ.
23 photographs of Scottish scenery.

ALEXR. CRAIG CHRISTIE, ESQ.
Calcite in a rare crystalline form.

J. STUART THOMSON, ESQ.
Fibrous dolomite ; Airdrie.

T. DINGWALL, ESQ., Ramornie, Ladybank.
Sandstone showing iridescent films of limonite, Bowden quarries, Fife.

J. ROBERTSON, ESQ.
Specimens of mispickel and associated kaolin ; Bargaly Estate.

P. DUDGEON, ESQ., of Cargen.
Mispickel ; Bargaly Estate.

T. PEARSON, ESQ.
Agate ; Sourhope Burn, Cheviots.

MRS. MUIR DOWIE.
Half-formed agate ; St. Anthony's Crags.

BEQUEST to the ART and INDUSTRIAL DIVISION in 1894.

BY THE LATE ROBERT NEWTON HAYWARD, Edinburgh.
11 prints by Dürer and other early masters.
Etching, "The Night Watch," by L. Flameng.
Etching, "Christ healing the Sick." The hundred guilder print by Rembrandt.
5 portrait medallions in opaque white paste, by Tassie.
3 Wedgwood cameos.
Plaque, "Pliny's Doves," in glass mosaic.
Pair of carved ebony candlesticks.
Bronze group, "The Amazon," by Kiss.
Japanese vase in cloisonné enamel.

Appendix F.

REPORT BY DIRECTOR, EDINBURGH MUSEUM.

LOANS received by the ART AND INDUSTRIAL DIVISION during the Year 1894.

- MISSES C. and C. J. RAEBURN, London.
  - Painting, "Hannah More," by Sir Henry Raeburn, R.A.
- THE RT. HON. THE LORD PROVOST OF EDINBURGH.
  - The Bannockburn Shield.
- THE DEPARTMENT OF SCIENCE AND ART.
  - 33 Old English encaustic tiles.
  - 6 porcelain vessels, Siamese.
  - 3 Dutch tiles.
- DR. JOHN GALLETLY, Rippingale, Lincoln.
  - Drawings, by the late Alexander Galletly, Curator of the Edinburgh Museum, illustrative of pre-Norman, Norman, and other periods of Scottish architecture.

LOANS withdrawn from the ART AND INDUSTRIAL DIVISION during the Year 1894.

- Model of the Scott Monument, Edinburgh.
  - Lent by the late Mrs. Dick, Edinburgh.
- 3 oil paintings by Sir Henry Raeburn, R.A.
  - Lent by the Misses Raeburn.
- The Bannockburn Shield.
  - Lent by the Rt. Hon. the Lord Provost of Edinburgh.

LIST of DONATIONS to the LIBRARY during 1894.

- GOVERNMENT OF FRANCE.
  - Ports Maritimes de la France. Tome VIII.
  - Brevets d'Invention : Description des Machines et Procédés. 3 vols.
- H.M. SECRETARY OF STATE FOR INDIA.
  - Hampson's Moths of British India. Vol. II.
  - Progress Report of the Archæological Survey Circle, for year 1892–93.
- THE TRUSTEES OF THE BRITISH MUSEUM.
  - Catalogue of Birds, Vol. XXIII.
  - Catalogue of English Coins, Anglo-Saxon Series, Vol. II.
  - Catalogue of Printed Books. 18 parts.
  - Catalogue of Wealden Flora, Part I.
  - Monograph of Lichens found in Britain, Part I.
- THE SCIENCE AND ART DEPARTMENT.
  - Catalogue of Bookbindings and Rubbings of Bindings in the National Art Library.
  - Catalogue of Educational Library, 1893.
  - Catalogue of Machinery, Models, &c., Part I.
  - Demonstrations, &c., in Astronomical Physics at the Royal College of Science.
  - Directory of the Science and Art Department, 1894.
  - 41st Report of the Science and Art Department, and Supplement.
  - Finlay's History of Greece, and of the Byzantine and Greek Empires, 5 vols.
  - Grote's History of Greece. 12 vols.
  - List of Art objects acquired in 1892.
  - Return of Funds devoted by County and Municipal Councils to Science Art, &c.
- BRITISH COMMISSIONERS, CHICAGO EXHIBITION, 1893.
  - 135 publications relating to the Exhibition.
  - 74 publications of the U.S. Department of Agriculture.
- GEOLOGICAL SURVEY OF CANADA.
  - Annual Report, 1890–91.
- SMITHSONIAN INSTITUTION.
  - Annual Reports for 1891 and 1892.
  - Miscellaneous Collections, Vol. 34.
  - Ashman's North American Proctotrypidæ.
  - Bollman's Myriapoda of North America.
  - Bulletin of the American Museum of Natural History, No. 5.
  - Shufeldt's Scientific Taxidermy for Museums.
  - Smith's Catalogue of Noctuidæ of Boreal America.

Donations during the Year [illegible]

Sparrow Hawk (*Accipiter nisus*), from Tayfield, Newport, Fife; Scaup Duck (*Fuligula marila*), Sanderling (*Calidris arenaria*), Grey Plover (*Squatarola helvetica*), Water Rail (*Rallus aquaticus*), and Dunlin (*Tringa alpina*), from [illegible]

[illegible]

Jay (*Garrulus glandarius*) from Perthshire.

Presented by Bruce Campbell, Esq., British Linen Co.'s Bank, St. Andrew Square, Edinburgh.

[illegible] from Morven, Argyllshire.

Presented by Charles Campbell, Esq., Dalmeny Park, by Edinburgh.

Appendix F.

REPORT BY
DIRECTOR,
EDINBURGH
MUSEUM.

Specimen of *Scorpæna dactyloptera* from the Aberdeenshire coast, and case of Monstrosity in a Thornback (*Raia clavata*).

Presented by George Sim, Esq., 14, King St., Aberdeen.

Common Snake (*Tropidonotus natrix*), from Aldershot.

Presented by Daniel Moncur, Esq., 2, Roxburgh Terrace, Edinburgh.

Heron (*Ardea cinerea*), from Mid-Calder.

Presented by A. M. Milroy, Esq., British Linen Co.'s Bank, Grassmarket, Edinburgh.

Specimen of *Hypera plantaginis*, from North Berwick.

Presented by Miss L. H. Huie, Hollywood, Colinton Road, Edinburgh.

Specimens of one hundred and eighty-one species of Scottish Crustacea; two specimens of *Scorpæna dactyloptera*, from near the Isle of May; and an unusually depressed form of *Echinus esculentus* from the Firth of Forth.

Presented by Thomas Scott, Esq., F.L.S., 14, Lorne St., Leith.

Skull of Rabbit with distorted incisor teeth, and leg of *Cancer pagurus* with bifid terminal joint.

Presented by B. N. Peach, Esq., F.R.S., H.M. Geological Survey.

Three specimens of Black Rat (*Mus rattus*), from Belfast.

Presented by R. Lloyd Patterson Esq., 15, Talbot St., Belfast.

Three specimens of Stoat (*Mustela erminea*), and a Weasel (*Mustela vulgaris*), from Halmyre, Peebles-shire.

Presented by D. G. Laidlaw, Esq., Halmyre, Peebles-shire.

A very large chela of Common Lobster (*Homarus vulgaris*).

Presented by Mr. John Crawford.

Long-eared Owl (*Asio otus*), Great Titmouse (*Parus major*), Female Shoveller Duck (*Spatula clypeata*), Tawny Owl (*Syrnium aluco*), and Sparrow Hawk (*Accipiter nisus*), from Doune, Perthshire.

Presented by Lieut. Col. Duthie, R.A., Row, Doune, Perthshire.

Specimen of malformed Trout, from the Tyne at Haddington.

Presented by Charles Moore, Esq., 17, College St., Edinburgh.

Gouldian Finch (*Poephila Gouldiæ*), Female Serin Finch (*Serinus hortulanus*), male hybrid between Goldfinch (*Carduelis elegans*), and Canary (*Serinus canaria*), and male hybrid between Bullfinch (*Pyrrhula europæa*), and Linnet (*Linota cannabina*.)

Presented by D. Smellie, Esq., Edinburgh.

Specimen of Häuynite from the Laacher See, Rhenish Prussia, and ten British Butterflies.

Presented by Dr. R. H. Traquair, Museum of Science and Art, Edinburgh.

Stock Dove (*Columba œnas*), from Kale Valley, Roxburgh.

Presented by A. Elliot, Esq., Caverton, Roxburgh.

Two specimens of *Raja blanda*.

Presented by W. L. Calderwood, Esq., 7, Napier Road, Edinburgh.

Specimens of Twaite Shad (*Clupea finta*), and Common Tope (*Galeus canis*).

Presented by Mr. Charles Muirhead, Fishmonger, 79, Queen Street, Edinburgh.

Two living specimens of Lizard (*Lacerta* sp.), taken from Butternut from America.

Presented by Mr. Phillips, c.o. Messrs. Whytock, Reid & Co., Bedford Road, Edinburgh.

Bifid specimen of Brandling (*Lumbricus fœtidus*).

Presented by Robert Service, Esq., Laurieknowe, Maxwelltown, Dumfries.

Living specimen of Trout (*Salmo fario*); also Salmon Parr (*Salmo salar*), from Eddleston Water, Peeblesshire.

Presented by Mr. Donald Sinclair, 5, Brown Street, Edinburgh.

Living specimen of Natterjack Toad (*Bufo calamita*), from Cumberland.

Presented by James Crerar, Esq., 17, Archibald Place, Edinburgh.

Living specimen of Pike (*Esox lucius*).

Presented by Mr. T. Amos, 59, St. Leonard's Hill, Edinburgh.

Two specimens of Gypsum from Niddrie Mines, Joppa.

Presented by Mr. T. Budge, Portobello.

Two living specimens of Blindworm (*Anguis fragilis*), from Blackford Hill, Edinburgh.

Presented by Mr. Oliver Taylor, 8, Viewforth Gardens, Edinburgh.

A series of specimens showing the development of the Metacarpal, and Metatarsal bones, and the Phalanges in the Horse; also bones of Hind Foot of young Horse, showing separate ossification at the lower ends of the lesser metatarsal bones.

Presented by Prof. J. Struthers, M.D., LL.D., 24, Buckingham Terrace, Edinburgh.

Appendix F.

REPORT BY DIRECTOR, EDINBURGH MUSEUM.

Seventy-six specimens, comprising thirty-four species, of Lepidoptera and Coleoptera, from the neighbourhood of Plymouth.
Presented by A. E. B. Wood, Esq., 38, Rankeillor Street, Edinburgh.

Eleven specimens of larvæ of *Chironomus plumosus*, from Dunipace, Larbert; two fœtal *Balænoptera*, from Faroe; and two young male Black Grouse (*Tetrao tetrix*), from near Denny.
Presented by J. A. Harvie-Brown, Esq., Dunipace, Larbert.

Four specimens of *Asterias rubens*, from East Wemyss, Fife.
Presented by Mr. Thomas Kirkpatrick, Museum of Science and Art, Edinburgh.

Eight specimens of the Brine Shrimp (*Artemia salina*), from a lagoon in the Camargue, South France; five skins of Lagopodes from America; skeleton of male Weasel (*Mustela vulgaris*); young Curlew (*Numenius arquata*), from Gladhouse, Midlothian; and nest of Penduline Titmouse (*Ægithalus pendulinus*), from Arles, Bouches-du-Rhone.
Presented by William Eagle Clarke, Esq., Museum of Science and Art, Edinburgh.

Grey Mullet (*Mugil capito*), from the River Dee Kirkcudbright, and two specimens of Porbeagle Shark (*Lamna cornubica*).
Presented by Messrs. John Anderson & Sons, 29, Castle Street, Edinburgh.

Fourteen Insects from Jamaica.
Presented by Mrs. Kerr, 14, Hartington Place, Viewforth, Edinburgh.

Volcanic Bomb found at base of Mount Victoria, Wai, Temati Co., New Zealand.
Presented by Mr. Farquhar.

Young in down of Goosander (*Mergus merganser*), from Rothiemurchus.
Presented by Lionel W. Hinxman, Esq., H.M. Geological Survey.

Thirteen specimens of malformed Trout from Loch Enoch, Kirkcudbrightshire.
Presented by Henry Dickson, Esq., Glentrool Lodge, Newton Stewart, Wigtownshire.

Squirrel (*Sciurus vulgaris*), from Appin.
Presented by James Faed, Esq., Airos Hotel, Appin.

Thirteen specimens of Skins and Horns of Mammalia from Nyassaland, and thirty-seven Birds' Skins, from British Central Africa.
Presented by Mr. Commissioner H. H. Johnston, C.B., Queen Anne's Mansions, London, S.W.

Sixty-two specimens of Birds from India.
Presented by Dr. Aitchison, c/o. Messrs. Groome, Grindlay & Co., Bombay.

Specimen of Ruin Marble from North Italy.
Presented by P. Dudgeon, Esq., Cargen, Dumfries.

Young Hawfinch (*Coccothraustes vulgaris*), from Arniston, Gorebridge, Midlothian.
Presented by Robert Dundas, Esq., Arniston, Gorebridge, Midlothian.

Specimens of Green Sandpiper (*Totanus ochropus*), male Grouse (*Lagopus scoticus*), showing change of plumage from autumn to winter, and young Wild Cat (*Felis catus*), from Ardnamurchan, Argyllshire.
Presented by Archibald Burn-Murdoch, Esq., Merchiston Avenue, Edinburgh.

Young of Great Crested Grebe (*Podicipes cristatus*), from Lindores Loch, Fife.
Presented by Allan Briggs, Esq., St. Andrews.

Crossbill (*Loxia curvirostra*), from Foula, Shetland.
Presented by Frank Traill, Esq., Duke Street, Edinburgh.

Nests of *Lima hians*, (2 specimens).
Presented by John D. F. Gilchrist, Esq., the University, Edinburgh.

Female specimen of Long-eared Bat (*Plecotus auritus*), from North Berwick.
Presented by D. J. Vallance, Esq., Museum of Science and Art, Edinburgh.

Two male Argus Pheasants (*Argus gigunteus*), and a Fireback (*Lophura rufa*), from Lower Burma.
Presented by R. Broomard White, Esq., Arddarroch, Garelochhead, Dumbartonshire.

Snowy Owl (*Nyctea scandiaca*), Willow Grouse (*Lagopus albus*), and two Lemmings (*Myodes lemmus*).
Presented by C. H. Urmston, Esq., Woodlands, Merchiston Place, Edinburgh.

Two-barred Crossbill (*Loxia bifasciata*), from Louth, Lincolnshire.
Presented by John Cordeaux, Esq., Great Cotes House, R.S.O., Lincoln.

Appendix F.

REPORT BY THE DIRECTOR, EDINBURGH MUSEUM.

Specimen of Precious Opal from Mexico.
Presented by Dr. Wm. Mackie, Elgin.

Specimen of Daubenton's Bat (*Vespertilio Daubentoni*), from Glen Dochart, Perthshire.
Presented by Symington Grieve, Esq., Edinburgh.

Two impressions of scales of *Holoptychius*, from the Upper Old Red Sandstone, Alves.
Presented by the Rev. James McKemmie, School House, Alves, near Elgin.

Tawny Owl (*Syrnium aluco*), from Masham, Yorkshire
Presented by Basil Carter, Esq., Burton House, Masham, Yorkshire.

Three Birds' Skins.
Presented by J. G. Goodchild, Esq., Museum of Science and Art, Edinburgh.

Female specimen of the Ruddy Sheld-Duck (*Tadorna casarca*), shot on the Firth of Tay.
Presented by Lieut.-Col. Drummond Hay, Seggieden, Perth.

Living specimen of Blindworm (*Anguis fragilis*), from Blackford Hill.
Presented by Mr. Adam Ferguson, 52, Bristo St., Edinburgh.

Three hundred and eighty-nine Insects, chiefly Coleoptera, from Rustenburg, Transvaal.
Presented by George S. Brock, Esq., M.D., 11, Lauriston Gardens, Edinburgh.

Twelve specimens of Coleoptera from Morningside, Edinburgh.
Presented by Percy H. Grimshaw, Esq., Museum of Science and Art, Edinburgh.

Tawny Owl (*Syrnium aluco*), from Shieldaig, West Ross-shire.
Presented by Mr. Donald Matheson, Shieldaig, West Ross-shire.

Specimen of Cook Wrasse (*Labrus mixtus*).
Presented by William Cowan, Esq., Tankerness House, Kirkwall, Orkney.

Green Sandpiper (*Totanus ochropus*), from Dougalston, Dumbartonshire.
Presented by J. Ripley Ker, Esq., Dougalston, Milngavie, N.B.

Two specimens of Water-Hen (*Gallinula chloropus*), from Thurston, Innerwick, East Lothian.
Presented Mr. Wm. Anderson, Thurston, Innerwick.

A Python from Kurrachee.
Presented by Mr. Wm. Brown, 25, Waterloo Place, Edinburgh.

Twenty-four specimens of Fossil Fish remains from the Upper Old Red Sandstone of the Elgin District.
Presented by Wm. Taylor, Esq., Lhanbryde, Elgin.

Eight specimens of Rocks and Minerals.
Presented by the Trustees of the British Museum.

Skin of *Cyclothurus didactylus* and skull of Two toed Sloth (*Cholæpus Hoffmanni*).
Presented by Dr. Ireland, Georgetown, British Guiana.

Appendix G

REPORT BY DEAN OF ROYAL COLLEGE OF SCIENCE, DUBLIN

APPENDIX G.

REPORT of the DEAN and COUNCIL of the ROYAL COLLEGE OF SCIENCE for IRELAND for the Year 1894.

SIR,

I HAVE the honour to submit the annual report of the Dean and Council of the Royal College of Science for Ireland for the year 1894, together with copies of the examination papers for the past session, 1893–94, and the Directory of the College for the session 1894–95.

The courses of instruction have been duly carried out, but not without some difficulty in at least two Departments, owing to the inadequate accommodation in the building for the number of students who had entered. The difficulty was in part surmounted, by transferring the instruction in practical chemistry given to students of the second year from the first to the second term of the session, and the corresponding class in practical physics from the second to the first term. This arrangement rendered it just possible to find room in the chemical and physical laboratories for those students who, after having paid their fees and entered upon the work of the session, were entitled to laboratory accommodation. In some degree this was occasioned by an alteration in the curriculum which came into operation in October 1893, but this was by no means the chief cause of the congestion.

Sessional Examinations were held in all subjects, and in the principal examinations the Professors acted conjointly with examiners appointed by the Department.

During the illness and necessary leave of absence of Professor Barrett, My Lords gave their sanction that Mr. Brown, the Demonstrator in Physics, should, under the direction of the Professor, be entrusted with the duty of delivering the lectures, and take charge of the physical laboratory. During three months Mr. Brown discharged these onerous duties in an entirely satisfactory manner. Mr. Fournier d'Albe was appointed a temporary assistant in the physical laboratory.

The many consecutive hours of daily work in the unwholesome atmosphere of the chemical laboratory had an obviously injurious effect upon the health of assistants, attendants, and some of the students engaged therein. It is much to be regretted that no system of ventilation has yet been established to supply fresh air to the chemical laboratory notwithstanding reiterated complaints. The College is thus placed at a great disadvantage in comparison with other institutions, wherein the most approved methods of ventilation have been adopted.

In the department of Physics work has been impeded by the want of room for the safe storage of apparatus and instruments of precision in charge of the Professor. All available space in the laboratory, on the floor of the Lecture Theatre, and underneath the seats is occupied. This renders it necessary to take some of the instruments to pieces and stow them away, and when again required they have to undergo the reverse operation of unpacking, removal and refitting, whereby they are rendered liable to injury, and are not properly protected.

An improved arrangement for darkening the Lecture Theatre without noise or difficulty has been fitted below the glass roof in place of the old shutters, which were cumbersome, troublesome, and even dangerous.

A supply of dry steam for experimental purposes has been laid on in the physical laboratory.

It has been found necessary to find additional space for the annually increasing number of volumes in the Library. As at present, and for some time past, it has been found necessary to utilize the wall space in different rooms of the College for the storage of books which cannot be placed for want of room in the Library, the facilities for consulting works of reference have in

Appendix G.

REPORT BY DEAN OF ROYAL COLLEGE OF SCIENCE, DUBLIN.

a corresponding measure been thereby diminished, while the satisfactory service of the Library at the same time is rendered difficult and laborious.

In accordance with the expressed wishes of My Lords, practically all the objects of an artistic or ornamental character have been removed from the galleries and transferred to the Museum of Science and Art, but nevertheless the cases of models and machines retained for teaching purposes, have so little floor space between or around them, that in many instances it is very difficult to utilize them for class instruction. This is especially the case with large models which cannot be moved into the lecture rooms, and which require careful examination by the students. Both the Library and the collections referred to are open to the public, and therefore the inconveniences which arise are not confined to the College.

Several inquiries have been addressed, in the first instance, to the Professor of Engineering, for information as to the existence of workshop practice and mechanical laboratory instruction in the College. Residents in Ireland have expressed their reluctance to sending their sons to England to be educated in the scientific work of Mechanical Engineering, but find it necessary to do so. In June 1889, the Council by unanimous resolution, called the attention of the Department to the urgent need of establishing a Chair of Mechanical Engineering. It was naturally to be expected that the Royal College of Science would be properly equipped for so increasingly important a branch of education.

In addition to the regular work laid down in the College Directory, some additional instruction has been voluntarily provided for such students as were desirous of obtaining it and capable of profiting thereby. In Mathematics this has been given by the Professor and Demonstrator, in Botany by the Professor of Botany.

In order to carry out special methods of chemical analysis, and also for the purpose of testing the accuracy of the analytical weights used by the students, it is very necessary that every facility should be provided in the College for weighing with the most minute accuracy. Accordingly, a set of standard weights and a very delicate balance of novel construction, made by Ruprecht of Vienna, have been purchased. Unfortunately, in consequence of the unsubstantial construction of the building it has been found that there is no place of safety in the College sufficiently free from disturbance by vibration where these instruments can be properly utilized.

The geological collection has been enlarged by the following gifts of specimens :—

From Miss S. M. Thompson, of Macedon, Belfast, 25 specimens of Rocks and Fossils from the North of Ireland.

From Mrs. Davis, St. Margaret's, Foxrock, a series of British and Irish specimens for laboratory use.

From Mr. R. Welch, of Belfast, four fine enlarged photographs of Irish Scenery.

From Professor Haddon, an important series of rock specimens from Torres Straits, and

From Mr. A. H. Foord, F.G.S., some 40 specimens of Irish carboniferous Fossils.

This last gift coming from the naturalist, who has described many of the species represented, is a peculiarly interesting addition to the teaching collection.

As in other departments there is a lack of space, so that many objects can only be used at the lectures, and not kept permanently on exhibition. It is also to be noted that the proper arrangement of the various collections is dependent on the time that can be spared by the Professor, there being a lack of adequate assistance for such work.

The following are among the objects, which have been acquired for the College by purchase :—

[illegible] Valve Gear Model, a Donkin's Harmonograph for illustrating the composition of harmonic vibrations, a new lathe for the physical laboratory; a series of 12 enlarged photographs, by the late Mr. W. H. Donkin, illustrating features of the Higher Alps; and 72 permanent photographs from Mr. Welch's Irish geological series; a number of new Rock specimens; and Dr. [illegible] Geotectonic Models illustrating mountain structure.

Appendix G.

Report by Dean of Royal College of Science, Dublin

Several valuable additions to the Zoological and also to the Botanical teaching collections have been made during the past year. The assistance derived from the supply of material for study and the facilities for work in the Laboratory of the Royal Botanic Gardens at Glasnevin, and in the Herbarium of the Science and Art Museum, have continued to prove very beneficial and all that could be desired.

Professor Johnson has continued his investigations of the Irish Marine Algæ, with the assistance of Miss Hensman, a former student of the College.

Several former students have returned to continue their studies in Zoology.

Professor Haddon has completed a Monograph on "The Decorative Art of " British New Guinea: a Study in Papuan Ethnography," which has been published as a Cunningham Memoir by the Royal Irish Academy.

The following researches have passed into publication :—

Flame Spectra at High Temperatures.

Part I. Oxhydrogen Blowpipe Spectra.

Philosophical Transactions, Vol. 185, pp. 161–212, 1894.

Part II. The Spectrum of Metallic Manganese, of Alloys of Manganese and of compounds containing that element.

Part III. The Spectroscopic Phenomena and Thermo-Chemistry of the Bessemer Process.

Philosophical Transactions, Vol. 185, pp. 1029–1091, 1894, by W. N. Hartley, F.R.S.

Abstracts of Part II. and III. appeared in the proceedings of the Royal Society.

On variations observed in the Spectra of Carbon Electrodes, and on the Influence of one Substance on the Spectrum of another.

Proceedings of the Royal Society, Vol. 55, pp. 344–49, by W. N. Hartley, F.R.S.

Professor T. Johnson, D.Sc., F.L.S., has contributed the following papers :—

Systematic Position of the Bangiaceæ (La Nuova Notarisia, 1894.)

Shell-boring Algæ (Natural Science, 1894).

The Functions of an Irish Botanical Museum (Journal of Museums' Association, 1894).

Two Irish Brown Algæ, Pogotrichum and Litosiphon.

(Annals of Botany Decr. 1894).

The following papers by the Professor of Geology have been published during 1894 :—

"On Variolite and other Tachylytes, at Dunmore Head, co. Down," Geological Magazine, 1894.

"On Derived Crystals in the Basaltic Andeste of Glasdrumman, Port co. Down." Trans. Royal Dublin Society, Vol. V.

"On the Geology of Torres Straits," in conjunction with Professor Haddon and Professor Sollas. Trans. Royal Irish Academy, Vol. XXX.

Miss Maguire, M.B., secured first class Honours in the final B.A. of the Royal University.

Miss E. Sweeny, B.A., has been appointed Science Mistress in the High School, Wolverhampton.

Mr. Watson Crossley and Mr. William Barlow, Associates in the Faculty of Manufactures, passed the examination of the Institute of Chemistry and were elected Associates.

Mr. S. D. Carothers, Associate in the Faculty of Engineering, has been appointed to an important post on the staff of Messrs. Martin, contractors for the Kingstown and Blackrock Main Drainage Works.

Mr. E. St. John Lyburn, Associate in the Faculty of Mining, has been appointed Assayer to a Company at Johannisberg, S. Africa.

Mr. M. J. Buckley, Associate in the Faculty of Engineering, has been appointed Assistant Surveyor to the Corporation of Dublin.

W. N. Hartley,
Dean of Faculty.

Feb. 18th, 1895.

Appendix G.

Report by Secretary, Royal College of Science, Dublin.

REPORT of the SECRETARY of the ROYAL COLLEGE OF SCIENCE FOR IRELAND for the Year 1894.

The number of students who attended the College during the session which terminated June 21st, 1894, was 111, of whom 29 were Associate students taking the three years' course, and 82 Non-Associate. In the previous session there were 113 students, of whom 34 were Associate, and 79 were Non-Associate.

The average number for the three sessions preceding the one now reported on was 30 Associates, 81 Non-Associates, total 111.

Comparing the number after completing the the first year's course have taken up a separate faculty, with the average number of similarly placed students for the previous three sessions, there were this year—

—	Mining.	Engineering.	Manufactures.
2nd and 3rd years' students - - -	2	9	5
Average last 3 years - - - -	3·3	8·6	4·3

The first year's students of course not being included as they do not choose their faculty till the second year.

The number of students who have studied at the College since the commencement of the present session is 61; the average for the past three years from commencement of each session till 31st December, being 70.

The amount of fees received during this period for the current year is 431*l.*; the average for the last three years being 424*l.*

The following Lectures, Lessons, and Demonstrations were given during the last Session:—

1st Year's Classes.

		Students.
112	Lessons in Pure Mathematics, by Prof. Orr, attended by -	18
51	" Elementary Mechanics, by Prof. Orr, attended by -	21
35	Lectures in Descriptive Geometry, by Prof. Lyon, attended by -	20
88	Lessons in Geometrical Drawing, by Prof. Lyon attended by -	21
41	Lectures in Theoretical Chemistry, by Prof. Hartley, attended by	20
3	Tutorial Classes, in Theoretical Chemistry, by Mr. Ramage, attended by - - - - - - -	20
31	Lessons in Practical Chemistry, by Prof. Hartley, attended by -	14
*47	Lectures in Theoretical Physics, by Prof. Barrett, attended by -	26
11	Tutorial Classes in Theoretical Physics, by Mr. Brown, attended by - - - - - - -	24
28	Lessons in Practical Physics, by Prof. Barrett, attended by -	20

---

* 20 of these Lectures were delivered by Mr. Brown, in the absence of Prof. Barrett, on sick leave.

2nd Year's Classes.

	Students.
74 Lessons in Pure Mathematics, by Prof. Orr, attended by - -	11
67 „ General Mechanics, by Prof. Orr, attended by -	11
75 Lectures in Machine Construction and Drawing, by Prof. Lyon, attended by - - - - - - -	12
103 Demonstrations in Machine Construction and Drawing, by Prof. Lyon, attended by - - - - - -	12
198 Lessons in Practical Chemistry, by Prof. Hartley, attended by -	36
45 Lectures in Advanced Chemistry and Metallurgy, by Prof. Hartley, attended by - - - - - - - -	8
56 Lessons in Practical Physics (given to Associates), by Prof. Barrett, attended by - - - - - - -	8
*135 Lessons in Practical Physics (given to Non-Associates), by Prof. Barrett, attended by - - - - - - -	32
20 Lectures in Theoretical Botany (given to Associates), by Prof. Johnson, attended by - - - - - -	8
12 Lessons in Practical Botany (given to Associates), by Prof. Johnson, attended by - - - - - -	8
30 Lessons in Practical Botany (given to Non-Associates), by Prof. Johnson, attended by - - - - - -	8
252 Lessons in Botany (given specially), by Prof. Johnson (assisted by Mr. Duerden), attended by - - - - -	8
30 Lectures in Theoretical Zoology, by Prof. Haddon, attended by -	12
15 Lessons in Practical Zoology, given to Associates, by Prof. Haddon, attended by - - - - - -	8
86 Lessons in Practical Zoology, given to Non-Associates, by Prof. Haddon, attended by - - - - - -	8
46 Lectures in Mineralogy, by Prof. O'Reilly, attended by - -	11
34 Demonstrations in Mineralogy, by Prof. O'Reilly, attended by -	11

3rd Year's Classes.

69 Lessons in Mechanism and Thermodynamics, by Prof. Orr, attended by - - - - - - -	5
69 Lessons in Applied Mechanics and Hydrodynamics, by Prof. Orr, attended by - - - - - - - -	5
80 Lectures in Engineering, by Prof. Lyon, attended by - -	5
160 Lessons in Engineering Drawing, by Prof. Lyon, attended by -	3
18 Lectures in Surveying and Plotting, by Prof. Lyon, attended by -	4
8 Lessons in Field Work in Surveying and Plotting, by Prof. Lyon, attended by - - - - - - - -	4
45 Lectures in Advanced Chemistry and Metallurgy, by Prof. Hartley, attended by - - - - - - -	2
144 Lessons in Assaying, by Prof. Hartley, attended by - -	1
196 „ Analytical Chemistry (to Students in Faculty of Manufactures), by Prof. Hartley, attended by - - - -	3
68 Lectures in Theoretical Chemistry (to Medical Students, R.U.I.), by Prof. Hartley, attended by - - - - - -	3
37 Lessons in Theoretical Chemistry (to Medical Students, R.U.I.), by Prof. Hartley, attended by - - - - - -	2
16 Lessons in Practical Physics (to Students in Faculty of Engineering), by Prof. Barrett, attended by - - - -	2
54 Lectures in Geology, by Prof. Cole, attended by - - -	4
25 Demonstrations in Palæontology, by Mr. Duerden, attended by -	5
†32 Lessons in Practical Geology, by Prof. Cole, attended by - -	6

---

* Each lesson lasting from 1½ to 5 hours.
† Including four Field Excursions.

Appendix G.

REPORT BY SECRETARY, ROYAL COLLEGE OF SCIENCE, DUBLIN.

Diplomas were granted to students who completed the course for the Associateship, as follows:—

Mr. Watson Crossley „ William Barlow	Faculty of Manufactures.
Mr. Samuel D. Carothers „ Thomas J. Reynolds	Faculty of Engineering.

The two Royal Scholarships open to Associate students on the completion of their first year's courses were awarded to Messrs. J. H. Hardy and W. S. Waters.

The silver medal for passing the best examinations in the first and second years' courses was awarded to Mr. Charles Jefcoat.

620 volumes, including unbound proceedings and reports, were added during the year to the Library, which was visited by 557 persons other than the staff and students of the College.

The Museum was visited by 1,032 persons during the year, as compared with 1,328 during the previous year. As objects of art and of general interest have been transferred to the Science and Art Museum and the collections here only contain such articles as are required for illustration of lectures and for teaching purposes there is no reason for any large number of the general public to visit the Museum.

Evening Lectures.—Professor Johnson gave a practical course of 12 on the Flowering Plants of Ireland, attended by an average of 15 students.

G. T. PLUNKETT,
Secretary.

Dublin, January 17th, 1895

Appendix H.

REPORT BY DIRECTOR, DUBLIN MUSEUM.

APPENDIX H.

REPORT of the DIRECTOR of the SCIENCE AND ART MUSEUM, DUBLIN.

To the SECRETARY OF THE SCIENCE AND ART DEPARTMENT.

SIR, Leinster House, 4th January 1895.

I HAVE the honour to submit, for the information of my Lords of the Committee of Council on Education, the following report on the Science and Art Museum, the Royal Botanic Gardens, Glasnevin, and the Metropolitan School of Art, for the year ending 31st December 1894. The report on the National Library, by the Council of Trustees, will be forwarded in due course as soon as it has been received in this office.

Staff.—Our available working staff has been much crippled during the year Both Mr. Longfield and Major McEniry were obliged to take sick leave for long periods, and other officers had to apply for shorter terms.

There have been no changes in the *personnel* of the Museum nor of the National Library, and no alteration in the status of any of the officials.

In the Botanic Gardens the gardeners and labourers have been placed by the Lords of the Committee of Council on Education, with the sanction of the Treasury, on a considerably improved footing as regards wages, which, for the future, should secure to the gardens picked men such as are required for their proper conservancy.

The abolition of payment by fees by the Science and Art Department, with the sanction of the Treasury has been carried out in the case of the teachers in the Metropolitan School of Art. The modelling master has been succeeded by Mr. Hughes, a former pupil: Mr. M. Buckley has succeeded the late Mr. Nabholz as teacher of Mechanical Drawing, and Mr. Cecil Orr has been appointed Lecturer on Architecture *vice* Prof. Drew, retired.

Deputations.—In July Mr. Moore made his usual tour for the purpose of purchasing and exchanging plants. In the course of his tour he visited some of the principal nurseries and gardens, at Bristol, Bath, Chepstow, and Birmingham and then went on to London. In the same month Prof. Johnson visited London to select from duplicates in the British Museum, for the Herbarium.

Twice in the spring, and again in August, I visited London on official business, on the last occasion being accompanied by Mr. Moore. In September Mr. Brenan, head master of the School of Art, and I, visited a number of Museums and Schools of Art in north and central Europe. Our notes of this tour have been incorporated in a special report which will be communicated separately.

Technical Assistance.—Again this year we have had the advantage of the skilled assistance of Messrs. F. W. Wakeman, G. Coffey, and A. Foord in connection with the arrangement of the antiquities, coins, and palæontological collections respectively.

Publications.—No new publications have been issued during the year; but a guide to the Geological collections is at press; and Mr. F. W. Moore has in preparation a new edition of the guide to the Botanic Gardens which will, I hope, appear shortly. A descriptive list of the South Sea weapons, deposited by Trinity College, has been printed, and some other lists have also been prepared for press, and will be issued during the present year.

Electric Lighting.—There has, I regret to say, been very great delay in carrying out the extension of the electric lighting, as well as of some other items sanctioned for the current year. Up to the present only the Natural History Offices have been connected with the installation, and the extension to the Natural History Museum has not been commenced.

The breakdown in the health, and resignation of the Mechanical Engineer in charge of the heating has led to a consolidation of the heating and lighting staff which will I trust produce satisfactory results.

New Offices.—The new offices for the accommodation of the officers of the Natural History Department were handed over and occupied in February.

Connecting Bridge with Leinster House.—The new building for the theatre attached to Leinster House is about to be commenced on the old site, and it has been arranged that the present temporary passage between these offices and the Museum shall give place to a permanent passage, including a room or rooms, which will prove important additions and afford a convenient means of access to the offices by the public.

Refreshment Room.—The project for utilising the still unused wing of the Library for the above purpose has again been put forward in a requisition to the Board of Works, and it is hoped that the necessary funds will be provided during the coming financial year. Several important representations have been made as to the great want of a Refreshment Room felt by visitors and students to these premises.

The New Annexe.—I have for some time back been viewing with anxiety the approaching congested condition of the Museum which has come close to us with remarkable rapidity. Our principal halls and galleries are nearly full, and relief for the normal expansion of the Museum will have, in the first instance, to be found by the provision of galleries in the now long deferred annexe for the Geological, Mineralogical, and Botanical collections; and the appropriation of the rooms at present occupied by them to the purposes of the Art and Industrial Department.

Accommodation for the officers of the Art Department, which is now inconveniently scattered, will require to be provided in this annexe also.

On every ground therefore, it is desirable that a section, at least, of the annexe which will connect the two Museum buildings, should be proceeded with at an early date.

Parke Memorial.—With the approval of my Lords, and the concurrence of the Commissioners of the Board of Works, a site has been sanctioned on Leinster Lawn, for the erection of a memorial to the late Surgeon-Major Parke, by the committee of the Memorial Fund.

Museums' Association.—In June we received the above Association, and were pleased to find that we were able to show the members much that proved interesting and novel to them in the way of special fittings, and in the arrangements generally of the varied collections with which we have to deal here.

National Library of Ireland.—In January a set of revised rules which had been prepared by the Trustees for the better management of the Library, were approved by the Lords of the Committee of Council on Education, and have since been put in operation.

In February the question of Mr. Praeger's appointment, referred to in last year's report, was finally settled by the issue to him of a Civil Service certificate.

The period of twelve days which had previously been allotted for the closing of the Library for cleaning was reduced to ten for the present, with the possible prospect of a further reduction later on.

Collections of the Geological Survey of Ireland, which are under the direction of Sir A. Geikie, F.R.S.—I hope that at no distant time the gallery now occupied by these collections may become available for the reception of some of the Art collections.

The proximity of the wall of the new theatre will tend to darken the gallery, and I hope that a suggestion which has been made to the Commissioners of the Board of Works, that enamelled bricks may be employed in the building of the wall, will be adopted. In the case of fossils, no less, but rather more than with reference to other specimens, good light is required.

The following statement of work accomplished in this section has been received from Mr. McHenry.

"An additional series (40) of enlarged photographs illustrating the geological structure of interesting localities in Ulster, presented by Mr. R. Welch, of Belfast,

Appendix H.

Report by Director, [illegible] Museum.

member of the Belfast Naturalists' Field Club, were framed and hung up in the room, and the whole series of photographs, numbering 97, were rearranged.

"The special descriptive Hand Book of the collection compiled by Mr. W. W. Watts and myself, was completed and is now in the press.

"A series of graptolites from the Silurian rocks of co. Down, lately collected by Mr. Clark, were tableted, and placed in the cases, and the nomenclature of those previously exhibted from this county was corrected.

"Three large specimens of coal measure fish and reptiles were embeded in cement and cased, and now await positions to be assigned them.

"The type specimens of fossils were sorted out, re-tableted, and re-labelled, and are now set aside for exhibition in a special case in the Palæontological Room."

General Geological, Palæontological, and Mineralogical Collections.—As usual there have been additions in each of these sections during the year.

To the Geological collections there have been added a number of photographs illustrative of geological and physical structure, also relief maps of Palestine and Etna.

To the Palæontological collections a fine skeleton of a cave bear, transferred from the Royal College of Science, some bones of Dinornis purchased, and numerous Canadian Silurian Fossils from Col. Grant, &c. &c., have been added. The type fossils in the Museum are being placed in a separate case where they can be easily referred to.

The mineral collection has been enriched by the receipt of some magnificent crystals of selenite presented by the Utah University, per Dr. Talmage, and of a fine mass of Fluor Spar from the Trustees of the British Museum, besides which there have been many purchases.

Loan of Paintings.—As belonging both to Science and Art, mention may be made here of a very acceptable loan of paintings and plants, insects, and scenery in the Bahamas for which we are indebted to Lady Blake. These have shortly to be returned, but we hope to receive others at some future date representing the scenery, &c., of Jamaica.

Photographs.—There is scarcely any department of the Museum which has not received interesting, and most artistic photographs by Mr. Welch, of Belfast. Antiquities, Natural History, Art, and Ethnography are all illustrated by these pictures.

Herbarium and Botanical Museum.—This section of the Museum continues to progress under the care of Prof. Johnson, many donations have been received, especially from the British Museum; and from it, more than from any other public institution have we to acknowledge assistance in this respect.

Every botanist will acknowledge the advantages which are likely to follow from the bringing together here the many collections which were previously in private hands. And we gladly record the support and the donations received from several well-known Irish botanists.

Arrangements have not yet been made for obtaining more of Prof. Johnson's time for this branch of the Museum—although much to be desired.

The Economic collection is arranged in an attractive way which proves of great interest to many visitors.

Prof. Johnson reports as follows:—

"During the year steady progress has been made in the systematic arrangements of the various collections, both in the Herbarium, and in the more public galleries. Several valuable additions have been made to the economic collection. It is hoped that as a result of correspondence conducted during the year it will be possible next year to have on view exhibits illustrating Afforestation, and Willow-culture. The chief additions to the Herbarium have consisted of Irish flowering plants, and of plants of use in the study of the Irish Flora. The most valuable present the Herbarium has received since its formation is the large Herbarium of H. C. Hart, Esq., F.L.S., who, by this presentation, and in other ways, has shown his interest in our work. The Trustees of the British Museum (Natural History), have presented, through W. Carruthers, Esq., F.R.S., the Keeper of Botany, another useful batch of duplicates of British flowering plants.

"It is to be regretted that no additions to the exhibition case accommodation have been possible during the year. Some of the cases are little better than storage ones, and the majority in use are not suited to the proper display of the specimens. It is to be hoped that the Index Room will have the necessary cases supplied during the coming year, in order that the much needed Teaching collection may be made.

"Gratifying assurances of the utility of the Botanical collections continue to be received."

Natural History Department.—This department of the Museum offers no special feature for comment in the present report.

There are some important projected changes in the fittings, especially with regard to the bird cases, which want of funds have alone delayed.

The officers of this department have benefited by the erection of the new offices which are situated close to their work.

The following is an extract from the report by the keeper, Dr. Scharff:—

"The removal of the Natural History Staff, as well as the numerous cabinets containing insects, and the small reference library, &c., to the newly erected offices took place in the early spring. These rooms are more conveniently situated than the old ones, being in closer proximity to the public collections.

"Among the more important alterations in the Museum may be mentioned the successful transference of the cast of the Megatherium skeleton to the Palæontology Room. By the shifting of a partition, visitors are now enabled to walk right round the upper gallery. Not only have we gained additional space by this change, but it greatly facilitates the exhibition of the large consecutive series of insect collections for which it was chiefly intended to use the gallery.

"The continued exploration of the remote districts of Ireland by the Royal Irish Academy Fauna and Flora Committee, has yielded excellent results, from which the Museum has greatly benefited as a complete series of the specimens collected has been deposited in this Institution.

"The Palæontological collection has been enriched by the purchase of a tortoise from Madagascar, and a series of insects, chiefly from the Tertiaries of Germany.

"A very fine collection of Mollusca, including several hundred type specimens, has been bought from Dr. Westerlund of Sweden. The important collection of British insects made by the Rev. W. F. Johnson has also been acquired, and many valuable additions to the cabinet of Irish Lepidoptera have been presented by the Hon. R. E. Dillon, and by Miss Reynell. Among the donations may also be specially mentioned the fine series of Australian bird's skins presented by Dr. R. McDougall, a specimen of the rare *Hermatobates Haddonii* by the British Museum, and two new Irish Land Planarians by Miss Kelsall.

"The series of table cases containing the general collection of invertebrates is now being re-arranged on an improved principle, and it is anticipated that the change will tend to facilitate self-instruction, and increase the taste for Natural History."

Royal Irish Academy Collections.—From the following statement by the Curator it will be observed that good progress has been made in the arrangement of the above collections.

It is hoped that means will be provided for supplying further cases during the year.

A re-arrangement of the gold ornaments, on more appropriate stands, is in contemplation, and will be undertaken at an early date.

A copy of a report by a committee of the Royal Irish Academy, to the Council of the Academy, was received, in which approval of the arrangements, with the exception of some details, was expressed. The latter have subsequently been modified accordingly.

I regret that the Board of Works was unable to provide in last year's estimate for making an easy access to the basement where certain collections are stored. I trust the staircase required may be supplied during the current year.

Major McEniry reports as follows:—

"The latest additions to these collections consist of pre-historic stone implements weapons of bronze, ancient ecclesiastical seals, mediaeval vessels of brass, and a unique bronze-mounted ivory object of the early Christian period, recently found in the old abbey of Innisfallen, Killarney. Additional ebonised stands have been provided for bronze objects, also a series of movable wooden desk-shelves for the exhibition of stone weapons and implements, in one of the large wall-cases of the north-western pavilion, in the adjacent wall-case shelves of glass have been placed, on these are now arranged most of the earthen sepulchral vessels. The models of an ancient 'Bee-hive' stone house at Gallarus, and of the crannog wooden

Appendix H.

Report by Director, Dublin Museum.

dwelling of Drumkelin bog have been enclosed in suitable glazed cases. In the recently constructed mural ebonised frames in the southern gallery of the Central Court are displayed archaic and mediaeval sculptured stones with the carved slabs which, in the XVI. century, formed the historic 'Monument' on the old Bridge of Athlone. Five horizontal glazed cases have been utilized for the arrangement and exhibition of silver money of the Viking period, finger and signet rings of gold, silver and bronze, crystal balls, and silver maces, &c., ecclesiastical seals, and bone, and ivory carvings. To a large portion of these objects printed or manuscript labels are now attached. The classification, and cataloguing of the cists, sepulchral urns, and wooden objects are nearly completed. A list with descriptive and other details of the beads is in course of preparation."

Art and Industrial Department.—During the year (besides what may be referred to now as the normal acquisitions) there have been two considerable additions. The first is an extensive collection of South Sea weapons, lent by the Board of Trinity College; the second consists of the balance of the Art and Industrial specimens, a portion having been transferred to this Museum some years ago, from the Old Museum of Irish Industry, and exclusive of those required in the College of Science for teaching purposes, which are still retained there.

Our ethnographical collection, enriched by the above loan, is now one of the most important in the United Kingdom.

Mr. Buckley, who has prepared an admirable catalogue of the specimens, received some valuable aid from Mr. Edge-Partington and Herr Meyer of Berlin. This loan has been all arranged and will shortly be provided with the printed labels which are almost complete.

Mr. Longfield, the Keeper of the Department, reports as follows:—

"One of the most important additions, by purchase, during the past year has been a model illustrating the application of the Le Blanc process to the manufacture of Carbonate of Soda and the production of various other chemical substances, viz., Sulphate of Soda, Hydrochloric Acid, Bicarbonate of Soda and Caustic Soda. This model was made for the Science and Art Department by Mr. B. L. F. Potts from information furnished by the United Alkali Co. Ltd.

"Specimens of embossed leather and the tools necessary for the execution of the work were obtained from Hamburg.

"*The Ceramic Collection.*—Specimens of Chinese, Bow, Chelsea, Copenhagen, Vienna, and St. Petersburg porcelain have been acquired, also an Italian Majolica Plate, Ancient Mexican Pottery and Vases, &c. made by the Kabyle Arabs.

"*Collection of Arms and Armour.*—A Tournament Shield painted with the head of Medusa, and two small bronze cannon, one with figures in relief, and the other dated 1636, also an old Italian flintlock, the stock of which is cased in iron and richly decorated with chased scroll work, are the principal additions. The three latter specimens were from the Londesborough Collection.

"*Lace, and Embroidery Collection.*—Specimens of old Italian Laces and a sample for cut, drawn, and embroidered work, also a four-fold embroidered screen of early 18th century work have been purchased.

"*Ethnographical Collection.*—The principal specimens purchased have been a Feather Dress of a Mundurucu Chief (Brazil) and a carved Totem Pole (N.A.I.). This collection has also received an important loan from Trinity College of South Sea Island weapons.

"*Collection of Plaster Casts.*—Among the principal additions to these may be mentioned cast of carved wood-work from a house at Delft, Holland, 16th century; the early crosses of Nigg and Ruthwell, Scotland, Combat between a Lion and [illegible] from the staircase of Darius' Palace, Persopolis, sepulchral effigy of a lady from the Brera, Milan; reliefs from the tomb of S. Antony of Padua; and the Frieze to the pedestal of the Coleone statue at Venice; vases of Della Robbia Ware and Wood-carvings from King's Langley Church, England. A catalogue of the framed historical collection of casts of carved ivories has been abridged from Westwood's Catalogue of the S. K. M. collection, by Mr. Alabaster. It will doubtless be of great use to those who may be desirous of carefully studying the collection.

"*Royal College of Science Collections.*—A large number of specimens have been transferred from the college including stained and other glass, Mosaics, Enamels, Pottery, Electrotypes, Cast Iron, polished Marbles and Sculptures, which are now being incorporated with the General collections.

"*D[illegible]*—Among [illegible] J. C. N[illegible] Old Chinese Porcelain from the wreck of the "Yung Tomas" wrecked in T[illegible]

Bay, 1763, and which was obtained by him during a recent visit to the Cape; Thomas Drew, Esq., R.H.A., President, R. S. Antiq., Ireland, Elevation of proposed Portico to House of Lords, Dublin, by James Gandon, fine engraving of Trajan's Column at Rome and two old Moorish Tiles from Spain; the Corporation of London, two Medals commemorative of the visit of their Majesties the King and Queen of Denmark to the City of London and the marriage of T.R.H. the Duke and Duchess of York, 1893; F. Sander, Esq. (per F. W. Moore, Esq., M.R.I.A.), a Collection of Ethnographical specimens from New Guinea; The Trustees of the British Museum, Facsimiles of Drawings in the Museum; the Right Revd. Dr. Graves, Bishop of Limerick, Ogham Stone from Co. Kerry; Max Rosenheim, Esq., French bronze weights, 16th century; The Commissioners of Public Works a pencil drawing of proposed additions to Maynooth College by A. W. Pugin; J. W. Henderson, Esq., collection of Chinese and Japanese objects.

" *Loans.*—A large collection of Ethnographical specimens from the South Sea Islands lent by the Board of Trinity College; Highland bag-pipes lent by The McLeod; Chinese porcelain dish lent by Miss Bastable; a collection of specimens has also been lent by the Royal Irish Academy."

Metropolitan School of Art.—I think it will be seen from a close perusal of the following report that not only has the position of the previous year been maintained, but also that there has been distinct improvement in almost every department of the School.

Reference has already been made on a previous page to certain changes in the staff, and we have every reason to believe that the new appointments will prove satisfactory. Mr. M. J. Buckley succeeds the late Mr. Karl E. Nabholz, whose death was much regretted in the School. Mr. Hughes succeeds Mr. Ascough as teacher of Modelling, and Mr. Cecil Orr follows Professor Thomas Drew as lecturer on Architecture.

It has been decided that payments will no longer be made by "results"; but it may be stated as showing the excellence of the work of the school, that the very last grant, so made, amounted to 400*l.*, or more than double what it was ten years ago.

The Anatomy class under Prof. Fraser continues to do well, thus out of ten candidates who presented themselves six were successful (one obtaining the mark "Excellent").

Prizes in the National awards are yearly becoming more difficult to win, owing to increased competition, and, therefore, we do not consider that the School has done otherwise than well, because the prizes do not on this occasion exceed two bronze medals and eight National book prizes, also three Queen's prizes, which are conferred on those holding the best of the marks "Excellent" in the advanced examinations. The latter were won by Miss Houston and Messrs. F. O'Donohoe and Lodge.

The grant for the "special prize" scheme is, this year, barely adequate, so numerous have been the number of successes in Elementary subjects.

The Scholarships of 10*l.* each, awarded by the Royal Dublin Society to five students who are specially recommended, continue to prove important aids to the education of deserving students.

Miss Jacob and Miss Webb have been awarded a number of prizes for lace designs, &c. Art Teachers' Certificates have been completed respectively by Misses Blake, Clarke, Draper, Fitzgibbon, Hinkson, and Murphy.

His Excellency the Lord Lieutenant distributed the prizes at the beginning of last year and, it is hoped, will do the same again this year. Such public distributions serve, it is believed, as a valuable incentive to the students, and they also bring the operations of the school into public notice.

The Head Master reports as follows :—

" The total number of students has been 482, showing an increase of 23 over last year. Of this number 174 attended the day, and 308 the evening, classes.

" The total number of fees was 497*l.* 17*s.* 6*d.*, being a decrease of 41*l.* 11*s.* from the amount received the preceding year. The day class fees amounted to 392*l.*, and the evening class to 105*l.* 17*s.* 6*d.*

" The claim for payments on results amounted to 423*l.* 12*s.*, being an increase of 29*l.* 10*s.* over last year.

" The total number of works sent to South Kensington for examination was 635

Report by
Director,
Dublin
Museum.

"The following are the results of the examinations for the Elementary drawing certificate:—

Freehand drawing	71
Geometrical "	15
Model "	62
Perspective	38

of these, 71 obtained the mark "First Class."

"In Elementary Shading from the Cast, 32 students were successful, 12 of whom were awarded "First Class." In Elementary Modelling eight students passed, six of whom gained the mark "First Class."

"The total number of successes in the Elementary stages was 226, being an increase of one over last year. The total number gaining "First Class" was 89, being exactly the number gained last year.

"In the Advanced Art Examinations the results were as follows:—

Shading models	30
Antique from memory	4
Anatomy	6
Drawing from life	8
Drawing from antique	8
Painting still life	2
Painting monochrome	3
Historic ornament	1
Principles of ornament	12
Shading from the cast	32
Ornament in outline	37
Modelling from antique	1
Architecture	1

"The total number of successes in the Advanced stages was 145, being an increase of 16 over last year, and the number of 'First Classes' gained was 73, being 11 more than the number gained last year.

"In drawing from the Antique, two students gained the mark 'Excellent'; in Antique from memory, three; Anatomy, one; drawing from life, one; drawing ornament from the cast, two; Shading ornament from the cast, two. The total number of 'Excellents' gained was 11, being an increase of seven over last year.

"The number of works accepted for certificates was 76, exactly the same number as last year. Of these, 10 works were for Group I. One work for Group II. The remainder were for the Art Class Teachers' Certificate.

"The engagement of Mr. Ascough as teacher of the Modelling Class terminated in July. He has been succeeded by Mr. John Hughes, a former gold medallist at this School. Under Mr. Hughes' energetic teaching the class is increasing, and I expect to have the pleasure of reporting next year a considerable improvement in the results of this class.

"The Science classes sustained a loss through the illness of Mr. Nabholz, their teacher, whose subsequent death we all regret. The results were good compared with those of the preceding year. One of the students of this class was awarded a National book prize for a set of measured drawings of a 'Horizontal Compound Condensing Engine.' The successes were: Descriptive Geometry, [illegible]; Machine Drawing, [illegible]; Building Construction, [illegible]. This is a total [illegible] last year. The classes are now under the instruction of Mr. M. Buckley, and I anticipate good results from his attention to the classes.

"In the new class for Descriptive Geometry 19 successes were gained by the female students. This is an increase of [illegible] over the number gained last year.

"In the National Competition the School was successful in gaining 10 awards, (two Bronze medals and eight Book prizes) an increase of two on the preceding year. Three Queen's prizes were gained, for 'Figure from the Antique,' 'Ornament outlined from the Cast,' and 'Shading from the Cast,' this is an increase of two over last year.

"The number of students entitled to prizes under the local prize scheme, and the subjects for which they were awarded, are as follows:—

Geometrical drawing	[illegible]
Drawing from antique	2
Antique from memory	1
Anatomy	1
Elementary modelling	6
Drawing from life	1
Machine drawing	[illegible]

Building construction - - - - -	1
Advanced freehand - - - - - -	2
Principles of ornament - - - - -	2
Advanced shading - - - - - -	2
Perspective - - - - - - -	18
Elementary model drawing - - - - -	29
Elementary freehand - - - - - -	24
For sets of works - - - - - -	18

"The total shows an increase of four over last year.

"Eighteen Free Studentships were offered to students, provided they were found qualified according to the conditions laid down in the Science and Art Directory. The successful students are Wm. N. Orpen, Ethel Richardson, Violet Fleming, Annie G. Webb, Henrietta Hamilton, Thomas Hamilton, Lydia Taylor-Coffey, Mary Hinkson, and Julia Flavelle.

"The following were recommended for the Scholarships of 10*l.* each given by the Royal Dublin Society:—James McGrath, Henry Donnelly, Lydia Taylor-Coffey, Ethel Richardson, Francis O'Donohoe.

"A course of 20 lectures on Anatomy, including demonstrations on the living model was given by Dr. Fraser, it was attended by 57 students, 10 of these presented themselves for examination, of whom six were successful, one gained the mark 'Excellent.'

"A course of 12 lectures on Architecture was given to the students of the evening class by Prof. T. Drew, R.H.A. The lectures were attended by 77 students, one student presented himself for examination and was successful. As Mr. Drew found it impossible to spare time to give the lectures next year, his place has been taken by Mr. Cecil Orr, F.S.I., A.R.I., B.A., who has had experience in training students for the examinations of the Institute of British Architects.

"In the competition for the Taylor Prize, the Scholarship of 50*l.* and the optional prize of 10*l.* were won by Miss Edith Bell, formerly a modelling student of this School and now a free student in the National Art Training School, South Kensington.

"The students of the Designing Class were fully occupied during the year. A tea service designed by Miss Alice Jacob for Dr. E. Percival Wright, was manufactured by the Belleek Company. Many designs for lace and crochet were made for the Irish Industries Association, and have been worked at different centres. The students also competed for the prizes offered by the "Studio," works by Misses Jacob, Wilkinson, Crowe and Houston received honourable mention. Contributions sent in by the two last-mentioned students have been published in its pages.

"At the Exhibition of Art industries in connexion with the Horse Show of the Royal Dublin Society, in competition for the prizes for lace designs, &c., the students gained 17 prizes. Miss Jacob succeeded in winning nine first prizes. The Committee of the Branchardiere Fund purchased ten of the lace designs at the close of the exhibition, and trial pieces are now being made from them.

"A student of this school, Miss Annie G. Webb, succeeded in gaining the Silver Medal and first prize at the Royal Dublin Society's Exhibition for a piece of white embroidery which was designed and worked by herself.

"At the Kirkby Lonsdale Exhibition of Arts and Crafts, the students gained four prizes. In the section for designs for embroidery, Miss Annie G. Webb, 1st prize; Miss Alice Jacob, 2nd. In designs for hand-made lace, Miss Jacob, 1st prize; Miss E. Wilkinson, 2nd.

"Thanks are due to the donors of the following gifts to the School, Mrs. Redgrave for a copy of "The Life of Richard Redgrave, R.A., C.B." To Thos. Drew, R.H.A., for his gift of original drawings by J. S. Copley, R.A., and to W. Booth-Pearsall, F.R.C.S.I., for the loan of six valuable pieces of antique Flemish stamped leather.

"The following students were selected to attend the summer course of instruction at South Kensington, Misses Jacob, Fleming, and O'Clery.

"An exhibition of students' works took place at Christmas and was attended by 11,185 visitors. The distribution of prizes by His Excellency the Lord Lieutenant was held on the 18th January. The advantage of holding the distribution while the works were on exhibition, and at a time when the course of study is not interfered with, was apparent to all.

"The competition for three Free Studentships for Modellers was held in the month of July. The successful students were Misses Flavelle, Richardson, and Taylor-Coffey.

"The Students' Sketching-Class continues to work satisfactorily and with evident benefit to the members. A selection from the sketches made during the year attracted considerable notice in the exhibition of students' works at Christmas.

"The Landscape Class met as usual during the months of June and July. As the class was mainly composed of junior students it was considered advisable to restrict

Appendix H.

REPORT BY DIRECTOR, DUBLIN MUSEUM.

the study to the Botanic Gardens. The class was attended by 31 students, and was under the instruction of Miss Julyan, Mrs. Barden, and myself.

"The Branch Classes at Loretto Abbey, Rathfarnham, and Dominican Convent, Wicklow, have ceased connexion with this School. In these Convents, members of the community have succeeded in obtaining the necessary certificates, and are now qualified to carry on the instruction in their own classes. The results of the classes which retain their connexion with the School are as follows:—

Dominican Convent, Cabra.

Geometry	3
Freehand, elementary	5
Model, advanced	1
Perspective	8
Advanced shading from cast	2

Model drawing	5
Monochrome painting	1

"Six were '1st class.' One work for Art Masters' Certificate was accepted."

"I desire to thank my assistants for their valuable aid in the conduct of the school."

Botanic Gardens, Glasnevin.—One of the long outstanding requirements of the gardens, "a house for succulent plants," which has so frequently been asked for, will, we have every reason to hope, be at last provided during the current year. Should this prove to be the case, the chief want then remaining will be a special house for Tropical Ferns, a class of plants which, like the "succulents," require special temperature and treatment in order that they may flourish.

The good services of Mr. F. W. Moore, Keeper of the Gardens, have often been referred to in previous reports, and it is a pleasure to be able to state now that he has recently been awarded a medal for distinguished services to horticulture by the Veitch Trustees.

Mr. Moore reports as follows:—

"*Conservatories.*—The conservatories have been maintained in good order, all necessary repairs were promptly executed by the Board of Works' officials, and all painting provided for in the estimates has been done.

"No. I. Fern House.—The tubs in which some of the large tree-ferns grew being much decayed, new tubs were purchased, and the plants were successfully transferred to them, without any injury being done.

"No. II. Aquatic House.—This house was painted outside and some necessary repairs to the roof were done.

"No. III. Curvilinear Range.—The entire range was painted outside, a large amount of cracked and broken glass was removed, and the roof generally has been put into good order.

"No. VI. Orchid House.—The Orchid House was painted, inside. All the plants were removed to the Propagating Pits, and to the Palm House, and the woodwork was allowed to get thoroughly dry before painting, the fresh paint being also allowed

Appendix H.

REPORT BY DIRECTOR, DUBLIN MUSEUM.

to harden before the plants were brought back. They suffered very little from the change, and they are at present in excellent health.

"No. VII. Large Palm House.—No change was made in this house during the past year. The condition of the house, and of the plants in it, is in every way satisfactory.

"No. VIII. Camellia House.—The outside of the Camelia House will require to be painted next year.

"*Propagating Pits.*—Pits Nos. 1 and 2 of stable range were painted inside and outside, the plants from them being transferred to other pits for the time being. Repairs to ventilators and doors are required in some of the pits, and application has been made to have these repairs provided for in the ensuing estimates. Such repairs as were provided for in the estimates for the current year have been properly carried out.

"*Outdoor Department.*—Much work has again been done in the outdoor department, both in continuation of work previously commenced, and in new work.

"The new rock work for ferns is now almost completely planted. E. J. Lowe, Esq., of Chepstow, again very generously presented a large collection of over 100 varieties of his choicest ferns, and these with those previously received from him, and from other sources, constitute a very fine collection of hardy ferns, and form a distinct and interesting feature. More of the peat beds for Rhododendrons, Azaleas, &c. near the pond were renewed and replanted.

"Remaking defective walks was attended to, some of the old walks being completely broken up, and re-made on a new and firm foundation.

"The beds containing the Agricultural Grasses, which are much referred to by students, were entirely re-made. The grasses had got mixed, and as the beds had not been re-made for many years, the soil had become exhausted. All the grasses were lifted and cleaned, the ground was well trenched, and fresh soil was incorporated.

"The collection of species and varieties of Iris was also renewed, the same method being adopted as with the grass classes.

"Useful and substantial brick pits have been constructed in the lower plant yard, and in the soil yard, also a shed for holding seeds, implements, &c.

"*Arboretum.*—As the young trees are increasing in size, the arboretum is becoming each year more interesting and instructive.

"A large elm near the pond, and a large elm which over shadowed the propagating houses, were taken down. Some of the elms on the bank, at the back of the Curvilinear Range, which showed signs of decay were also taken down, fortunately before any accident occurred, as some of them were found to be quite unsound.

"Over 100 young trees were moved from the nursery ground to the various classes, such as *Crataegus*, *Acer*, *Ulmus*, *Pyrus*, *Fraxinus*, &c. These young plants had been carefully prepared, much better results following from keeping newly purchased plants in the nursery ground for a few years until well established, instead of planting them at once in the open grounds. All the young plants in the enclosed nursery ground were lifted and transplanted.

"*Purchase of Plants and Seeds.*—By carefully studying numerous catalogues, and by visiting some of the leading nurseries, I found, and purchased, many interesting plants which were required for the various collections. Several of these I could not have purchased were it not for the liberal reductions made by some of the leading nursery men, a favour for which I am indebted to them.

Number of plants purchased in 1893, 982.

REPORT BY DIRECTOR, DUBLIN MUSEUM.

japonicus, Coelogyne Swaniana, Coryanthes magnifica, Corypha Wogani, Colutea melanocalyx, Crinum fimbriatum, Cypripedium Mastersianum, Cymbidium pulcherrimum, Dendrobium Hildebrandtii, Fraxinus Veltheimi, [illegible] [illegible]flora, Hemitelia setosa, Hymenophyllum parvulum, Jambosa acida, Juglans Sieboldiana, Licuala Rumphii, Masdevallia chimaera majestica, Maxillaria scurrilis, Marattia Thwaitesii, Mormodes Rolfeana, Philadelphus Coulteri, P. Lewisii, Pleurothallis pernambucensis, Polypodium [illegible], Prunus Grayana, Pteris moluccana, Restrepia ecuadorensis, Rhamnus [illegible], Rosa Alberti, Spathoglottis Ericssoni, Stangeria paradoxa, Stapelia grandiflora, S. Woodfordii, Tamarix kaschgarica.

" *Exchange of Plants and Seeds.*—Much attention is given annually to acquiring as many plants as possible by means of exchange, but each year I experience greater difficulty in getting rare and valuable plants by this means. The exchange of seeds with gardens in all parts of the world has developed to a large extent. The seed list published each spring is widely distributed, so much so that this year no less than 4,193 packets of seed were sent from Glasnevin. In 1884 the number sent was 1,467, so that in ten years there has been an increase of 2,726 in the number of packets of seed distributed. This entails a large amount of time and labour in filling seed packets, writing names, packing, and forwarding, but many good and valuable seeds are received in return. A collection of [illegible] hardy plants was sent to Queen's College, Galway.

" Again I desire to tender my special thanks to Messrs. James Veitch and Sons, Messrs. Hugh Low & Co., and Messrs. F. Sander & Co., for the extent and value of their contributions; also to the Director of the Royal Gardens, Kew, who has on all occasions responded liberally to the appeals made to him on behalf of Glasnevin, and to E. J. Lowe, Esq., who supplemented last year's gift with a further large contribution of his choicest ferns, a very valuable present. Important donations of plants were also received from the following:—Thomas Acton, Esq., D.L., James O'Brien, Esq., J. T. Bennett Poe, Esq., W. E. Gumbleton, Esq., J.P., Rev. Canon Ellacombe, Comr. T. Hanbury, A. Taylor, Esq. (New Zealand), Herr Max Leichtlin, Mons. H. Correvon, J. Wood, Esq., Messrs. Barr and Son, Messrs. Cowan and Co., Mons. C. Vuylsteke, Herr W. Pfitzer, Mr. T. Smith, Mons. Van-Tubergen.

" The number of donations to the garden was 148, the number of donors, 98, residing in the following countries:—England, 32; Ireland, 29; Scotland, 2; Wales, 1; Germany, 5; France, 4; Italy, 4; Holland, 2; Austria, 2; Hungary, 2; Switzerland, 2; Russia, 1; Denmark, 1; Norway, 1; Belgium, 1; Spain, 1; India, 1; New South Wales, 1; Victoria, 1; Tasmania, 1; New Zealand, 1; Cochinchina, 1; Buenos Ayres, 1; South Africa, 1.

Donations to Garden.

Plants - - - -	795
Seeds - - - -	1,576 packets.

Donations from Garden.

Plants - - - -	1,160
Seeds - - - -	4,193 packets.

" The following are amongst some of the rarer plants received in exchange:—*Acrostichum Prestoni, Aristolochia Westlandi, Asplenium cordifolium, Berberis [illegible], Bismarckia nobilis, Bulbophyllum Dearei, Centaurea [illegible], Cryptophoranthus oblongifolius, Cyrtanthus MacOwani, C. Tuckii, Dendrobium Coelogyne, Dermatobotrys Saundersii, Disa Kewensis, Heliconia metallica, Hypoxis obtusa, Laurelia [illegible], Luddemannia Lehmannii, Masdevallia auro-purpurea, Nepenthes madagascariensis, Nerine appendiculata, N. marginata, Olearia insignis, Primula [illegible], [illegible] [illegible], Pteris [illegible], Sadleria cyatheoides, Stanhopea Amesiana, Stapelia tsomoensis, Trochodendron aralioides, Turnera aurantiaca, Vitis Coignetiæ, Widdringtonia Whytei.*

" *General.*—Botanical Laboratory. Students from several parts of Ireland studied in the laboratory during the past year. They were supplied with such specimens as they required for their researches. A new microscope and a dissecting microscope have been purchased out of the ordinary funds for work in connexion with the garden."

Appendix H.

REPORT BY DIRECTOR, DUBLIN MUSEUM.

ATTENDANCE OF THE PUBLIC.

In the following tables the usual information will be found regarding the attendances of the public at the several Institutions. The total number of ordinary visitors to the Museum amounted to 483,010, or within about 17,000 of half a million. This is an increase by 115,365 over last year's total (367,645), and represents a daily average of 1,330·6 persons, for every one of the 363 days which the Museum was open to the public, it being closed only on Christmas Day and Good Friday. In the case of the Botanic Gardens there has been a falling off, as compared with 1893, of 17,229, the numbers being respectively, in 1893, 409,028, and in 1894, 392,699; but the latter is upwards of 15,000 higher than that of 1892, and the larger attendance in 1893 may probably be attributed to the much finer season of that year. There is therefore no ground for supposing that there is any decrease in interest and appreciation of the Gardens, on the contrary the large attendance has been really so to speak in spite of much bad weather.

The average Sunday attendance was as follows:—

—	1894.	1893.
Museum - - - - -	982·6	979
Botanic Gardens - - - - -	5,176·6	5,386·5
	6,159·2	6,365·5

In the case of the Museum therefore there was an average increase of 3·6 and in the Botanic Gardens a decrease of 209·9. In comparing the total attendances it must be borne in mind that there were 53 Sundays in 1893 and only 52 in 1894, so that an actual larger total in the case of the Museum in 1893 is compatible with the smaller daily average above given.

As on previous occasions the total attendance at the Botanic Gardens on Sundays is considerably more than double the total attendance for week-days.

The highest and lowest attendances on Sundays were—

Museum, highest, 14th January- - - -	2,024
,, lowest, 23rd December - - -	450
Botanic Gardens, highest, 25th November - -	9,600
,, ,, lowest, 13th May - - -	

The highest and lowest week-day attendances were—

Museum, highest, 15th August - - - -	4,222
,, lowest, 31st December - - -	518
Botanic Gardens, highest, 26th March (Easter Monday)	8,730
,, ,, lowest, 23rd October - - -	6

With regard to the first it may be remarked that the splendid show of Crysanthemums in November proved a more potent attraction, this year, than the sunshine of June, which in other years usually accounts for the largest attendances being in that month.

The total of the attendances of students at the Metropolitan School of Art was 31,950, being 5,278 better that in 1893, and the average daily attendance increased from 137·5 in 1893, to 161·4 in 1894.

In the National Library the attendance showed considerable improvement, having been increased by about 5,600, *i.e.*, from 113,888, in 1893, to 119,500 in 1894, and the daily average was raised from 388·7 to 403·7.

Summarising these facts and those contained in the following tables it will be seen that the total ordinary attendances for the year amount to the very large number of 1,027,159, being an increase of 109,026 on that of 1893 which in itself was far higher than that of any previous year.

The 'extra' attendances increase the former number by 10,767 to the grand total of 1,037,926.

It is perhaps needless to repeat what was said in last year's report as to the encouragement such figures afford to those engaged in the management of the several Institutions.

It is the testimony of the principal officers in these institutions that those under their immediate authority, respectively, have all worked well, with which good opinion I fully concur.

In conclusion I venture to express the hope that this record of what has been accomplished during the past year will be approved and deemed satisfactory by my Lords.

(Signed) V. Ball, C.B., LL.D., F.R.S.,
Director, Science and Art Museum, Dublin.

I.—*Science and Art Museum.*

Months.	Totals, 1893.	Week-days, 1894.		Sundays, 1894.	Totals, 1894.

APPENDIX I.

FIFTEENTH ANNUAL REPORT of the BOARD OF VISITORS of the SCIENCE AND ART MUSEUM, the NATURAL HISTORY COLLECTION, and the BOTANIC GARDENS.

Appendix I.

REPORT OF THE BOARD OF VISITORS.

To the Science and Art Department of the Committee of Her Majesty's Most Honourable Privy Council on Education.

The Board of Visitors inspected the Dublin Museum and the Botanic Gardens at Glasnevin in March 1895, and beg to submit this as their Report.

I.—ART AND INDUSTRIAL COLLECTION.

The favourable comments which we have been able to make in our late reports as to the general arrangements of the Museum, and the progress made in completing the collections, may be repeated this year with even greater emphasis.

In the main hall we notice with satisfaction the addition of fine models of the Nigg Cross from Ross-shire, and the Ruthwell Cross from Dumfries.

These with the very beautiful model (to a scale of 1-10th) of the chapel of St. Peter Martyr, attached to the church of St. Eustorgio, Milan, and several other minor additions fill the body of the Hall as completely as it is possible, consistent with the necessary room for passages.

The Art specimens transferred during the year from the College of Science Museum, including some fine examples of Limoges enamels, and the very interesting and extensive collection of South Sea weapons deposited by the Board of Trinity College, form most valuable additions to the art and ethnological departments. The interest of this collection will be considerably enhanced when the work of labelling is completed.

We would recommend that labels (particularly when it is necessary to place them far back in cases) should be printed in larger type, as some, in some of the darker parts of the galleries, are hardly readable.

While the increased attendances of the public as shown by the Director's Report, the rapid growth of the collections, and their present state of perfectness, are matters for congratulation, they naturally bring into immediate importance the question of the providing of more space in the near future. Anyone visiting the Museum now cannot but be struck with the idea that unless immediate steps be taken to provide increased space for exhibits, the congestion will shortly become so great as to interfere with the proper exhibition, as well as safety, of the exhibits, and the comfort of the public.

We notice with satisfaction that the provision of the much needed refreshment room is receiving attention, this could be carried out without much difficulty.

II.—ANTIQUARIAN COLLECTION.

In this Department steady progress has been made in the arrangement and better exhibition of the collections, and the affixing of labels to the various objects. In particular may be mentioned what has been done for the display of the signet and finger rings, the seals—of many of which good wax impressions are also shown—and the coins. A case is devoted to an interesting collection of the silver ornaments of the Viking period.

The suggestion which we made in our last Report as to the mounting of some of the bronze Celts has been carried into effect.

Models of an ancient bee-hive house at Gallarus and of a crannog have been placed in glazed cases in the Long Room.

In the North-Western Pavilion many sepulchral and other urns are now advantageously exhibited on glass shelves, and a large number of stone weapons, formerly attached to trays, have been placed on wooden shelves within wall cases. Some of the urns which had suffered serious fracture have been repaired so that no trace of the injuries remains.

In the gallery outside the Academy's Museum some additional stones with ogham inscriptions have been placed, and an available wall-space has been filled with the "Monument" of the Bridge of Athlone.

A proper access to the crypt is in process of construction by means of steps leading from the music room, and the Director suggests that to complete the work a communication should be made with the upper storey by a spiral staircase from the North-Western Pavilion joining these steps.

We beg to repeat our suggestion of last year that a small Antiquarian Library should be provided for the use of the staff in this part of the Museum.

We cannot close without calling attention to the fact that the entire area allotted to the Academy's Collection is now practically exhausted, and that means of obtaining additional space must soon be seriously considered.

III.—MINERAL, GEOLOGICAL, AND NATURAL HISTORY DEPARTMENTS.

The Relief Map of Palestine is of great interest, and shows even to the non-military eye the valuable defence of Palestine afforded by the great valley of the Jordan. The Ford of the Shibboleth is well defined, and throws a bright light upon the old feud of the Gibeonites and Ephraimites.

The comparatively simple igneous rocks of Leinster and Donegal are well illustrated by the Geological Survey Collection; but the igneous rocks of Mourne and Carlingford will require much additional work, before the web of granite and volcanic rocks which they involve, is fully disentangled.

The fine cast of the Megatherium in the Fossil Collection, illustrated as it is, by the skeletons of the modern sloths, forms one of the chief attractions of the room in which it is placed. If the cast of the Glyptodon could be similarly illustrated by a skeleton and carapace of the modern Priodon, the collection would be very complete.

IV.—HERBARIUM.

We were pleased during our annual inspection to notice the efforts made in the Herbarium to provide facilities for students anxious for self-instruction. We regret that arrangements have not been made to secure more of Professor Johnson's time in this direction as was recommended in our Report of last year.

V.—BOTANIC GARDENS.

The various houses have been kept in good order during the year, and the plants have afforded not only pleasure but instruction to the large numbers who have from day to day visited the Gardens.

It is, however, a matter of great regret to the Visitors that notwithstanding repeated recommendations a House has not yet been provided for succulent plants, and it is earnestly to be hoped that this most needful addition to the Gardens will not be longer left unsupplied.

In the last Report the Visitors also recommended the erection of a Tropical Fern House; but this requirement has not yet been supplied, and they must renew their recommendation on this subject.

The Shelter at the gate, which was also recommended last year, is now in course of erection.

The very severe weather in the early spring of this year was most trying, but for the unceasing care and attention devoted to his duties by the Keeper, losses which might have been expected to be very numerous have been practically avoided.

(Signed) SAMUEL HAUGHTON,
Chairman.

Leinster House, 5th April 1895.

LIBRARIAN'S REPORT.

REPORT of the LIBRARIAN of the NATIONAL LIBRARY OF IRELAND, adopted by the COUNCIL of TRUSTEES, and forwarded to the DEPARTMENT OF SCIENCE AND ART as their Annual Report.

NATIONAL LIBRARY OF IRELAND,
Kildare Street, Dublin, 1st January 1895.

GENTLEMEN,

I BEG to hand you my Annual Report for the year 1894.

The attendance of the public registered by the turnstile during the year has been as follows:—

Gentlemen, morning (10 till 6 o'clock)	76,545	Daily average -	258·6
„ evening (6 till 10 o'clock)	35,312	„ -	119·3
	111,857		377·9
Ladies - - - - - - -	7,643	„ -	25·8
Total - - - - -	119,500	„ -	403·7

The foregoing shows an increase in the aggregate of 5,612 over that of the preceding year.

During the year there have been added to the library 2,061 volumes, of these 235 being folios, 232 quartos, and 1,594 octavos. The accessions acquired by purchase fall under the following classes:—

Bibliography - - -	27
Newspapers - - -	46
Ancient and Modern Philosophy - - -	18
Psychology - - -	5
Logic - - - -	1
Ethics - - - -	5
Theology (at large) - -	34

Appendix J.

LIBRARIAN'S REPORT.

The following is a return of the number of volumes lent out to, and received back from, the borrowing members of the Royal Dublin Society:—

Number of volumes in members' hands at 31st December 1893 - - - - -	400
Lent out during 1894 - - - - -	3,419
	3,819
Returned during 1894 - - - - -	3,441
Number of volumes in members' hands at 31st December 1894 - - - - -	378

As regards binding, 3,600 volumes were taken over by the binder in 1894 which along with 1,200 volumes then outstanding, makes 4,800 volumes, of which 4,200 have been returned, leaving 600 volumes in the binder's hands at the end of the year 1894.

During the year the Supplemental Catalogue for 1892 has been printed off, and has long since been in the hands of the public; that for 1893 is about halfway through the press; the copy for that of 1894 will speedily be ready. The value and utility of these thoroughly "classed" supplements so simple and easy in their employment, and so readily applied to, are daily felt and appreciated. The entries in the Desk Catalogue continue to be as promptly as possible intercalated, whilst the writing up of manuscript lists, as described in my last report, is being constantly kept up—to a great extent, indeed, to be ere long superseded on the appearance of the same in full bibliographical form in print.

Some progress has been made in the assigning of the class-numbers, otherwise location-marks, to the volumes of the Joly Collection, a work which is thus about five-eighths through. Otherwise the collection remains as last year, it fills one half of the floor just below that which is on a level with the Reading room, where it is in very good condition.

No beginning has been made in the setting up of the electric Accumulator for the supply of the light in the book-stores at times when the dynamo is not at work. Nothing has been done in the way of placing extra wires for certain additional electric lamps in parts of the book store where they are much required.

The vertical Lift for the hoisting and lowering of books, to be worked by electric power or otherwise, remains as great a need as ever.

I remain, Gentlemen,
Your obedient Servant,
(Signed) WM. ARCHER,
Librarian.

The Council of Trustees of the
National Library of Ireland,
Dublin.

Resolved, that the Librarian's Report be accepted and adopted by the Trustees as their report.

(Signed) ED. PERCEVAL WRIGHT,
Chairman.

5th February 1895.

APPENDIX K.

Appendix K.

REPORT ON ROYAL HIBERNIAN ACADEMY.

ROYAL HIBERNIAN ACADEMY of ARTS.

REPORT of the COUNCIL for the YEAR 1893–94.

The Council beg to submit to the Academy the annual report of its proceedings for the year 1893–94, as follows:—

The 65th Exhibition opened on Monday, March 5th, and closed on Saturday, June 2nd, a period of 13 weeks, during seven of which it was open by gaslight, at the reduced charge for admission of one penny, and on nine Sundays at a charge of two-pence. It consisted of 469 works, a number almost identical with that of the previous Exhibition.

It is gratifying to record that there has been an improvement in the receipts arising from the Exhibition, which although not very marked, yet indicates an accession of interest on the part of the public, and it is yet more gratifying to note the very great increase in the amount realised by the sales, a sum of 1,162*l.* 5*s.*, showing an increase of 359*l.* 10*s.* on the sum realised in 1893, which amounted to 802*l.* 15*s.*

The following is an analysis of the attendance and receipts:—

		£	*s.*	*d.*
142	Season tickets, at 3*s.* - - -	21	6	0
2,736	Day admissions, at 1*s.* - - -	136	16	0
8,408	Evening admissions, at 1*d.* - -	35	0	8
1,500	Catalogues, at 6*d.* - - -	37	10	0
1,688	Catalogues (evening), at 3*d.* - -	21	2	0
1,877	Sunday admissions, at 2*d.* - -	15	12	10
524	,, catalogues, at 3*d.* - -	6	11	0
	Commission on sales - - -	64	3	4
		£338	1	10

The expenses of the Exhibition, which by strict economy have been considerably reduced during the last few years, were again further reduced last Exhibition, thereby enabling the Academy to realise an increased margin of profit.

The pupils of the following Educational Institutions were invited to visit the Exhibition gratuitously:—

The King's Hospital.
Deaf and Dumb, St. Mary's, Cabra.
Deaf and Dumb, Claremount, Glasnevin.
St. Vincent de Paul's Male Orphanage.
Clergy Daughters' School.
Orphanage, Presentation Convent, George's Hill.
Masonic Male and Female Orphan Schools.
St. Mary's Industrial School.
Pleasants' Asylum.
Royal Hibernian Military School.
Drummond Institute for Soldiers' Daughters.
The Hibernian Marine School.

The school of the living model, and antique school opened on November 6th, 1893, and closed on June 15th, 1894, being open 29 weeks, with an average weekly attendance of 25 in the life school.

Appendix K.

Report on Royal Hibernian Academy.

The day painting school opened on March 19th, and closed on June 22nd, remaining open 14 weeks, three days weekly, the average attendance being 24 weekly.

The painting school was for the first time in the history of the Academy, opened to female students, of whom many availed themselves of the advantages of study thus afforded. This tentative effort to extend to females the opportunities of improvement in Art presented by the Schools of the Academy was attended with sufficient success to warrant its continuance next session.

The Albert Prize was not awarded this year, the works submitted for competition being neither in number nor quality sufficient to justify the award being made.

The President, Sir Thomas Farrell, and the Keeper, P. Vincent Duffy, Esq., R.H.A., with the assistance of F. B. Barwell, Esq., Inspector of the Department of Science and Art, made the awards at the Annual School Competition held on July 16th, 1894, but no works being submitted in the special competition for drawing from the living model, the following prizes were awarded in the remaining classes :—

Prize of 3*l*. best drawing from the life —C. E. Lodge.
„ 1*l*. second best drawing from the life—Not accepted by student.
„ 3*l*. best painting from life—C. E. Lodge.
„ 1*l*. second best painting from life—J. N. Bolton.

The Council desire to record the gratifying circumstance that His Excellency Baron Houghton, Lord Lieutenant of Ireland, conferred the honour of knighthood on the President of the Academy, on the occasion of the Queen's birthday, 1894, in recognition of the great services rendered by him to Art in this country, and of the distinguished position he had attained as President of this Academy.

Mr. Henry C. Tisdall, and Mr. Nathaniel Hill, Associates, were elected constituent members, and Mr. R. S. Shore, marine painter, and Mr. J. Howard Pentland, architect, were elected Associates, during the preceding 12 months, and during the same period, Mr. Nathaniel Hone, R.H.A., was appointed Governor of the National Gallery of Ireland, and the Director of that institution, Mr. Walter Armstrong, a distinguished critic and writer on Art, was elected an honorary member.

Mr. H. C. Tidall, R.H.A., was appointed to act as representative of the Academy at the annual award of the Taylor Art Competition for 1895, Mr. Walter F. Osborne, R.H.A., having acted in that capacity for 1894.

It is again matter of deep regret that the Council have to record the loss the Academy has sustained in the decease recently of two of its members, viz :—Mr. Joseph Robinson Kirk, R.H.A., who died at his residence, Bray, co. Wicklow, August 30th, 1894; a sculptor of ability, and son of a distinguished sculptor and member of this Academy, he was elected member in 1854, but although greatly interested in the Academy and its success, he was precluded by infirm health from attendance at its meetings for many years; and Mr. John Loftus Robinson, R.H.A., architect, whose death on October 12th, 1894, at his residence, Glenageary, co. Dublin, at the early age of 46 years, it is also our melancholy duty to record. Mr. Robinson was elected Associate of the Academy, on January 18th, 1886, and constituent member on July 18th, 1892, and was, in consequence, a member of Council for this year, at the meetings of which his great abilities and unfailing attention proved of much service to the Academy; he was also Auditor for 1894.

THOMAS FARRELL, Knt., President.

J. M. KAVANAGH, R.H.A.
J. J. INGLIS, R.H.A.
G. C. ASHLIN, R.H.A.
P. VINCENT DUFFY, R.H.A.
CHARLES RUSSELL, R.H.A.
} *Members of Council.*

S. CATTERSON SMITH, R.H.A., *Secretary.*

Report to Solar Physics Committee.

APPENDIX L.

Report to the Solar Physics Committee.

(*From April* 1*st*, 1894, *to January* 31*st*, 1895, *inclusive*.)

I.—Laboratory Work.

(a.) *Solar-Metallic Comparisons.*

No additional spectra have been mapped since the date of the last report, but some of them have been checked. In order to bring the work forward in a state suitable for publication, it has been decided in the first instance to limit the map to the six metals of the iron group. This new copy is now in a forward state, and in it the second series of Rowland's photographic map of the solar spectrum is employed as the comparison.

Particulars of the maps in the region D–A were inadvertently omitted from the table given in the last report. These have been filled up in the following table. The dots indicate that the carbon-pole spectra alone have been mapped, while the crosses denote that the lines due to impurities have been eliminated by an inquiry into the corresponding silver pole spectra.

(b.) *Reduction of the Observations of Widened Lines.*

A great amount of time has been devoted by the computers to the reduction and discussion of the observations of spot spectra.

(1.) The wave-lengths of all the lines which have been recorded since 1879 (about 700) have been transferred to Rowland's scale. As the observations have been made by various assistants, some little differences have occurred in the estimation of the positions of such lines as do not appear on Ångström's map; so far as possible, these have been cleared up by new observations, so that, as it now stands, the list of widened lines may be fairly taken to be a standard one.

(2.) The origins of the lines have been re-discussed, on the basis of the new Kensington maps of arc spectra, and especially of iron. The older reduction was based on the origins stated on Ångström's map. New curves of the frequencies of lines of iron and of unknown lines have been constructed, and the main result is to show that the curves of widened lines are similar to that of sun spots, but with a lag of about two years.

(3.) A considerable mass of data has been collected with reference to the spark, arc, and flame lines of iron occurring in the spot spectra.

(4.) Special investigations have been made of the basic lines which occur in the spot spectra in relation to Young's chromospheric lines. The new map of metallic spectra has formed the basis of this inquiry, but the results obtained by Messrs. Liveing and Dewar have been used as a control.

(5.) The variation of the spectra of spots with regard to latitude has been studied in some detail, with special reference to Dr. Brester's hypothesis.

(6.) Curves of the variation of the barometer, thermometer, and rainfall have been collected for comparison with the sun-spot curves.

(c.) *The Spectrum of Carbon Compounds.*

An examination of the old series of photographs of the spectra of the compounds of carbon, made in connexion with the spectra of bright line stars, suggests further experiments in which the gases are not so much confined as in Geissler tubes. New experiments with globes 6 inches in diameter are in progress, and the results so far obtained differ very considerably from previous ones.

(d.) *Experiments on Prominence Photographs.*

During the summer numerous preliminary experiments on prominence photography were made, and in the end a new apparatus was designed for the work. This has since been constructed, and will be employed as soon as the weather permits.

(e.) *The Spectrum of Magnesium.*

A new determination of the wave-length of the fluting seen in the spectrum of burning magnesium has been made with the Rowland grating.

(f.) *Reduction of Eclipse Negatives.*

Good progress has been made with the reduction of the photographs taken during the total eclipse of April 16, 1893. The lines in the spectrum of each prominence, or each part of the chromosphere, are being tabulated for the various stages of the eclipse.

(g.) *Discussion of Stellar Spectra.*

Since the paper on the "Photographic Spectra of some of the Brighter Stars" was communicated to the Royal Society at the end of 1892, the spectra of 70 additional stars have become available for investigation. These have been classified, and the whole of the photographs are being examined very minutely more particularly with regard to the differences between stars of increasing and stars of decreasing temperature.

The reduction of the spectra in the green and yellow has not yet been commenced.

Appendix L.

Report of Solar Physics Committee.

II.—OBSERVATIONS OF SUN SPOT SPECTRA.

The sun has been observed whenever the weather permitted, and on 81 days the most widened lines in the spectra of spots have been recorded. From April 1st, 1894, to January 1st, 1895 inclusive, there have been 306 days, or, excluding Sundays, 262. The following is a digest of the Observatory note book during this period:—

Month.	Bad Weather entirely Prevented Observations.	"No Spots" was recorded.	Spots recorded, but too small for Spectrum Observations.	Spots observed, but Spectra not recorded owing to bad Weather.	Days on which Observations of Spot Spectra were made.
April	8	—	—	8	9
May	7	—	—	3	7
June	15	—	—	1	10
July	18	—	—	6	7
August	15	—	—	2	10
September	12	—	1	4	8
October	17	—	—	4	6
November	10	—	—	6	10
December	18	—	—	6	7
January	11	—	—	9	7
Totals	131	—	1	49	81

III.—EVENING WORK.

(a.) *Number of observing Nights.*

The state of the weather on the 306 nights, from April 1st, 1894, to January 31st, 1895, inclusive, is indicated in the following table:—

Month.	Satisfactory Results obtained.	Observations attempted, but Results only fair, chiefly on account of bad Weather.	Observers attended, but no work could be attempted.	Nights wholly bad.
April	2	9	2	17
May	4	9	0	18
June	0	7	3	20
July	2	2	1	19
August	—	—	—	—
September	2	0	0	28
October	2	5	4	20
November	4	6	6	15
December	3	5	1	22
January	8	0	3	20
Totals	27	43	20	179

Appendix L.

Report to Solar Physics Committee.

Observers present on 90 nights.

Observatory work was suspended from July 25th to August 31st, 1894, on account of the pressure of solar work in the daytime, requiring the services of all assistants not then on leave.

(b.) *Photographs of Stellar Spectra.*

The 6-inch photographic telescope has been used in conjunction with the prism of 45°, except during a short time when it was used with the prism of 7½° in the investigation of the spectra of the variable stars of the δ Cephei class and of P Cygni.

β Lyræ and γ Cassiopeiæ.—The photographs of the spectra of these stars have been continued, but as in the latter star the changes, if any, are very slow, no attempt is made to take more than one photograph a month.

Variables of the δ Cephei Class.—Five variables of this class have been studied, but with the present instruments it is very difficult to obtain satisfactory photographs on any but the very best nights.

P Cygni.—Seven photographs of this bright line star have been taken for comparison with the spectrum of the Orion Nebula.

Photographs of the green part of the Spectrum.—Several of the brighter stars have been photographed again with special focus and exposures for the green region. Some of these are very satisfactory.

Attempts have occasionally been made to photograph the spectrum of the planet Uranus and of the stars of Group VI., but they are evidently beyond the range of the 6-inch telescope.

The following photographs have been taken since the date of the last report:—

(a.) *Stars photographed with 6-inch prism of 45° and 6-inch Henry Object Glass.*

Name of Star.	No. of Photographs.	Name of Star.	No. of Photographs.
α Andromedæ - -	1	η Leonis - -	1
α Urigæ - -	7	α Lyræ - - -	1
ι " - -	1	β " - - -	10
α Bootis - -	5	α Orionis - -	7
η " - -	1	β " - -	1
α Canis Majoris -	3	γ " - -	3
α Canis Minoris -	1	α Pegasi - -	1
γ Cassiopeiæ - -	7	β " - -	2
" - -	1	Pleiades - -	1
Cephei - -	1	γ Tauri - -	1
α Cygni - -	3	ζ " - -	4
α Geminorum - -	1	λ " - -	1
β " - -	1	ζ Ursæ Majoris with *Alcor.*	1
ζ " - -	1		
α Leonis - -	2	Ursæ Minoris -	1

(b.) *Stars photographed with 6-inch prism of 7½° and 6-inch Henry Object Glass.*

Name of Star.	No. of Photographs.	Name of Star	No. of Photographs
β Aquilæ - -	2	μ (68) Herculis -	2
53 „ - -	1	2174 „ -	1
η „ - -	5	α Libræ - -	1
α_1 α_2 Capricorni -	1	β Lyræ - -	1
δ Cephei - -	3	S Sagittæ - -	1
β_1 β_2' Cygni - -	1	5 Ursæ Minoris -	1
P „ - -	7	T Vulpeculæ - -	2
α Herculis - -	2		

The total number of photographs taken is 102, but, as pointed out in the last report, it is only with difficulty that the work with this instrument can be extended to the fainter stars.

(c.) *Eye Observations.*

In addition to the photographic work, numerous celestial objects have been observed spectrascopically, chiefly with the 3-foot reflector. Among these the following may be mentioned :—

Gale's Comet.—Carbon spectrum observed.

Mira Ceti.—Observations at various times, including the minimum.

γ *Cassiopeiæ.*—Some of the photographic results confirmed.

Nova Aurigæ.—Shows no notable change of brightness, and nebular spectrum maintained.

Stars of Group VI.—Five of these have been observed in some detail, and some lines have been noted which do not appear to have been previously recorded. Observations of several stars have also been made in the search for stars with spectra intermediate between the sun and stars of Group VI.

α *Orionis.*—Observations with reference to the possible variation of the dark band about λ 558 suggested by earlier work.

β *Cygni.*—Observations of spectra of the two components.

IV.—SUN PHOTOGRAPHS.

Indian Photographs :—

8-inch Pictures.

Since the beginning of April 423 8-inch silver prints have been received from Dehra Dûn. The dates of these extend from January 25th, 1894, to November 14th, 1895.

No photographs could be taken at Dehra Dûn on the following dates, on account of bad weather, and consequently gaps at these dates are left in the Indian record :—

1893.—November 19, 20.
December 25, 30, 31.

1894.—January 1, 18, 19, 20, 21, 22, 26, 27.
February 2, 4, 6, 7, 8, 9, 13, 28.
March 1, 4, 16.
April 13.
June 10, 11, 16, 19, 22, 28.
July 16, 19, 24, 25, 26, 27, 28, 29, 30.
August 2, 3, 5, 6, 9, 10, 11, 15, 16, 17, 24, 28, 29, 31.
September 3, 4, 5, 6, 7.
October 4, 5, 6.
November 4, 5.

The last parcel of Indian prints was received on January 22nd, 1896.
415 8-inch negatives have also been forwarded here from Dehra Dûn.

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

12-*inch Pictures.*

None.

Mauritius Photographs :—

Since the last report was made 310 8-inch silver prints have been received from Mauritius. The dates of these extend from November 1st, 1893 to October 10th, 1894. From these the gaps in the Indian series are filled up with the exception of the following days :—

1893.—December 31.
1894.—January 1, 20, 27.
November 4, 5.

The last parcel of Mauritius prints was received on January 9th, 1895, and as these only extend to October 10th, 1894, the above vacant dates in the Indian series in November 1894, will probably be filled up when the next batch arrives.

318 8-inch negatives have also been forwarded from Mauritius.

V.—INSTRUMENTS.

The chief addition to the instruments is an arrangement for experimental work on the photography of the solar prominences. In this apparatus two slits are fitted in front of the photographic plate, so that images with two lines may be taken at the same time.

An equatorial head suitable for a telescope of eight or nine inches aperture is on order.

All the instruments are in satisfactory condition, with the exception of the 3-foot reflector, which requires re-silvering before further attempts to photograph the spectra of nebulæ are likely to give satisfactory results.

VII.—PAPERS PUBLISHED OR IN PREPARATION.

(1.) The following papers have been published and distributed since the last meeting :—

"On the Photographic Arc Spectrum of Electrolytic Iron." "Phil. Trans.," vol. 185A, pp. 983–1021.

"On the Photographic Arc Spectrum of Iron Meteorites." "Phil. Trans.," vol. 185A, pp. 1023–1028.

"Preliminary Report on the results obtained with the prismatic cameras during "the Total Eclipse of the Sun, April 16, 1893." "Phil. Trans.," vol. 185A, pp. 711–717.

"The Spectrum changes in β Lyræ. Preliminary note." "Proc. Roy. Soc.," vol. 56, pp. 278–285.

"On the Photographic Spectrum of the Great Nebula in Orion." Abstract. "Proc. Roy. Soc.," vol. 56.

(2.) The following papers have been communicated to the Royal Society, but have not yet been published :—

"Observations of Sun-spot Spectra, 1879–94. I. The widening of iron lines and of unknown lines in relation to the sun-spot period."

"On the Photographic Spectrum of γ Cassiopeiæ." A discussion of 53 photographs extending over six years.

Some of the papers now in hand are as follows :—

"The Spectrum of Magnesium."
"Further Observations on the Spectra of Meteorites."
"The Classification of the Stars of Group VI."
"The Spectra of the Wolf Rayet Stars."
"The Spectra of Nebulæ ; being a Discussion of Lines other than the principal one."
"Observations of the Stars of Vogel's Class IIA."
"The Spectrum of o Ceti."
"Report on the results obtained with the prismatic cameras, during the Total Eclipse of the Sun, April 16, 1893."
"The Spectra of Variable Stars of the δ Cephei Class."
"Observations of the Spectra of Sun Spots."

Appendix L.
REPORT TO SOLAR PHYSICS COMMITTEE.

14. A reduction of the photographs of the ultra-violet spectra of some of the brighter stars, and of the photographic spectrum of P Cygni, forms part of the paper on the spectrum of the Orion Nebula. In this paper reference is also made to the observations of D_3 in the Spectra of Rigel and Bellatrix.

VII.—PERSONNEL.

The computers at present employed by the Committee are Messrs. F. E. Baxandall and W. Shackleton.

Mr. Fowler, Demonstrator of Astronomical Physics, and Messrs. C. P. Butler and D. Baxandall, Teachers in training, also assist in the Observatory work.

J. NORMAN LOCKYER.

Astro-Physical Laboratory,
South Kensington, 1895.

SUPPLEMENT

TO

FORTY-SECOND REPORT

OF THE

DEPARTMENT OF SCIENCE AND ART

OF THE

COMMITTEE OF COUNCIL ON EDUCATION.

DRAWING AND MANUAL INSTRUCTION IN ELEMENTARY SCHOOLS, DURING THE YEAR ENDED 31st AUGUST 1894.

Presented to both Houses of Parliament by Command of Her Majesty.

LONDON:
PRINTED FOR HER MAJESTY'S STATIONERY OFFICE,
BY EYRE AND SPOTTISWOODE,
PRINTERS TO THE QUEEN'S MOST EXCELLENT MAJESTY.

And to be purchased, either directly or through any Bookseller, from
EYRE AND SPOTTISWOODE, EAST HARDING STREET, FLEET STREET, E.C., and
32, ABINGDON STREET, WESTMINSTER, S.W.; or
JOHN MENZIES & Co., 12, HANOVER STREET, EDINBURGH, and
90, WEST NILE STREET, GLASGOW; or
HODGES FIGGIS, & Co., LIMITED, 104, GRAFTON STREET, DUBLIN.

1895.

[C.—7693.-I.]

The annual publications of the Department consist of—

(1.) The Directory, or Code of rules, for establishing and conducting Science and Art Schools and Classes. Price of 1895 issue, 6*d.*

(2.) The Calendar History, and General Summary of Regulations, which gives a history and general description of the Department, with a summary of the rules and a list of the Science and Art Schools and Classes, &c. Price of 1895 issue, 2*s.* 5*d.*

(3.) The Annual Report, which gives full information as to the operations of the Department during the past year. Price of 1895 issue, 1*s.* 9*d.*

(4.) Drawing and Manual Instruction in Elementary Schools. Supplement to the Annual Report, giving the details with regard to Drawing and Manual Instruction in Elementary Schools during the past year. Price of present issue (covering year ended 31 August 1894). Price 2*s.* 7*d.*

(5.) Annual Return made to the Department as to the Application of Funds, under the Local Taxation (Customs and Excise) Act, 1890, and the Technical Instruction Acts, &c., for the purposes of Science, Art, Technical, and Manual Instruction in England, Wales, and Scotland. Price of 1894 issue, 10½*d.*

LIST, under School Districts, of Elementary Schools Examined in Drawing in the Year ended 31st August 1894.

NOTES :—

(1.) The names of all School Districts are printed in capitals; other places in italics.

(2.) N. or Ch. denotes that the School is in connection with the *National Society*, or with the *Church of England*; B., with the *British and Foreign School Society*; W.. with the *Wesleyan Methodists' Conference*; R., with the *Roman Catholic Poor School Committee*; P., that it is a *Parochial* School; and Bd., a *Board* School.

(3.) The letter C. in column 4 means *Evening Continuation School.*

(4.) The letters E., G., F. in column 5 mean, respectively, Excellent, Good, and Fair.

(5.) A list of Schools to which grants for Manual Instruction were made during the School year ended 31st August 1894 is given at p. 634.
